

Project Quantograms Data directory

Wilfrid Kendall

4 March 2016

The **Data** directory contains data files used in the parent directory.

Original data supplied by Blair is contained in **Measurements.Data UNTIDY.docx**. A cleaned version (some site numbers changed) is contained in **Measurements.Data.docx**, and a key is given in **Measurements.Key.docx**. The data were manually exported to the text file **Measurements.txt**, which is then used as the source for the **rmarkdown** script **Quantograms.Rmd** in the parent directory **Quantogram**. This script can be run using **Rstudio**.
