4. Consultations for scurvy and uterine complaints in manuscript order, with half-century divisions 585
ACKNOWLEDGEMENTS

Many people have helped me at various stages of writing this thesis. I gratefully acknowledge in particular the help I received from my supervisors, Claudia Stein and David Lines. Their constant patience and guidance as I struggled with new and challenging ideas was exemplary, as were their sympathetic responses to my changing circumstances at different times and stages.

At the University of Warwick I was also greatly helped by advice from Vivian Nutton on the medical literature of the early modern period. Paul Botley helped me with technical problems of producing a critical edition, and also with the occasional Greek word in John Hall’s sources. As my examiners, Vivian Nutton and Guido Giglioni provided me with some useful insights.

The library and archive staff of the Shakespeare Birthplace Institute were all unfailingly helpful as I asked for increasing numbers of records and items. Other colleagues in Stratford upon Avon who provided help and encouragement were Susan Brock, Robert Bearman, Paul Edmondson, and Sir Stanley Wells, all of whom are owed my thanks.

Two of my predecessors in the study of John Hall deserve mention, though I cannot thank them as I wish. A chance meeting with Joan Lane shortly before her death inspired me, years later, to undertake this research. I have updated some of her information and identification of Hall’s patients, but my debt to her work is visible the thesis. At a greater remove, I owe a debt to James Cooke (? – 1693) for his original translation of Hall’s manuscript. Though I have criticised and corrected his editions at several points, the
process of working on this critical edition has given me an insight into the problems he must have faced some 350 years ago. I have turned to his version more than once when faced with a difficult point of translation.

Finally and most importantly, I thank my wife Mary, whose involvement with John Hall has been second only to my own. She has stoically accepted the intrusion of John Hall into our marriage, and my lengthy visits to the seventeenth century. Beyond this, her constant encouragement and help with many drafts and redrafts has helped me more than I can say.

All those mentioned here helped me in different ways. Any remaining errors and imperfections are entirely my own responsibility.

DECLARATION

This thesis is submitted to the University of Warwick in support of my application for the degree of Doctor of Philosophy. It has been composed by myself and has not been previously submitted in any previous application for any degree.

Some material arising from work on the thesis has appeared in print before the thesis was completed or examined: Greg Wells, 'His son-in-law John Hall', in Paul Edmondson and Stanley Wells (eds), The Shakespeare Circle: an Alternative Biography (Cambridge: Cambridge University Press, 2015) pp 86-100.
SUMMARY

This thesis presents a critical edition of John Hall’s casebook (composed around 1634-1635) and commentaries on aspects of it.

My research involved close reading of Hall’s Latin, and its translation into English. In the process it became apparent that Hall had made considerable use of unattributed borrowings from Latin medical books, making up between thirty and forty per cent of his text. These were mostly identified by detailed word searches of on-line databases. This is a use of medical texts not previously noted, and makes a clear connexion between Latin medical texts and routine medical practice.

The thesis is presented in four sections, plus introduction and conclusion. The first section, the Background, gives the history of Hall’s manuscript from its composition in 1634-35 to its acquisition by the British Library. It sets out the reasons for producing a new translation, the editorial principles and practice followed, and some medical themes running through Hall’s case reports.

Section two contains the critical edition itself, with parallel Latin and English texts. Footnotes to the Latin text give the sources of all of Hall’s borrowings from and references to medical and other texts.

The third section (Chapter 1) analyses the process and results of identifying Hall’s working library, of forty-three authors and sixty titles, from his borrowings. It puts his library in the early modern medical context in terms of its contents and categories of composition. I show that there were changes in the books Hall acquired over time, from those suitable for a student through to his later interests in chymical practice and the diagnosis of scurvy. Despite these changes, he continued to rely on old familiar texts for most of his remedies throughout his life.

The fourth section (Chapter 2) examines Hall’s manuscript in the context of casebooks generally. It differs from the majority of casebooks, the differences being explained by its composition as the draft for a book to be published. It shows that a casebook can have an internal structure related to the chronologies of its composition and the cases it draws on.

This thesis demonstrates the importance of Latin sources in at least one medical casebook of the early seventeenth century. I show that borrowings such as Hall’s were not unique even if rarer in other texts. The possibility of a Latin textual source should be considered for any Latin text in a casebook of that period.
This thesis reconstructs the medical practice and writing of a single physician, concentrating on a single document as a source. The physician is John Hall (1575-1635), best known as the son-in-law of William Shakespeare. The document is his manuscript entitled ‘Curationum historicarum et empiricarum, in certis locis et notis personis expatatrum et probatarum, Libellus’ or in English, ‘A Little Book Of Cures, Described in Case Histories and Empirically Proven, Tried and Tested in Certain Places and on Noted People’. The Latin words *historiarum* and *empiricarum* are not easy to put into English. I have been guided by Gianna Pomata’s explication of their varied meanings. Throughout this thesis I refer to Hall’s original document as his manuscript, my Latin transcription as the *Libellus* and the English translation as the *Little Book*.

The details of John Hall’s life are well-established. In brief, he was born in 1575 in Bedfordshire, the son of William Hall of

---

1 BL, Egerton MS 2065. The title is based on that of a book well used by Hall: Martin Ruland the Elder, *Curationum empyricarum et historicarum, in certis locis et notis personis optime expertarum et rite probatarum, centuriae decem* (Lyons: Pierre Ravaud, 1628).

whom little is known. He qualified as a physician at the University of Cambridge, receiving his B.A. in 1593/4 and his M.A. in 1597. Only a minority of physicians had doctorates, essential for teaching at a university or membership of the College of Physicians of London, but not for practice elsewhere.\textsuperscript{4} He never received a doctorate, nor claimed to have one nor was referred to as ‘Doctor’ by his contemporaries. There is no record of the next few years of Hall’s life, but he was most likely working to gain experience and possibly travelled in France. He moved to Stratford-upon-Avon not later than 1607 when he married Susanna Shakespeare. His father died the same year. In his will he specified that John was to receive ‘all my books of phisicke’ while ‘all my bookes of Astronomy and Astrologie’ were to go to William’s servant Mathewe Morris.\textsuperscript{5} John Hall was licensed as a physician by the Stratford-upon-Avon Church Court, which shared such responsibilities with the Bishop of Worcester.\textsuperscript{6} Hall was a committed puritan member of the Church of England, a position which involved him in conflicts between the Town Corporation and the parish church of Holy Trinity. Hall sided with the vicar Thomas Wilson in numerous disputes with the Corporation. He died in 1635, unexpectedly it would seem, as he left only a very brief nuncupative will dated the day of his death.\textsuperscript{7} John Hall was a fairly common name. Several other John Halls

\textsuperscript{5} Marcham, \textit{William Shakespeare}, pp. 21-22.
\textsuperscript{7} Marcham, \textit{William Shakespeare}, p. 25.
have been confused with the physician who lived and worked for most of his life in and around Stratford-upon-Avon.⁸

John Hall’s manuscript contains 178 case reports drawn from most of his years in Stratford-upon-Avon and written in 1634-1635. I present here a critical edition of that manuscript in parallel Latin and English texts.

This new edition offers new insights into the use of medical knowledge in the early modern period. As will become apparent, the *Libellus* is an important document in its own right and not just as a source for the translation. It shows that Hall relied extensively on Latin authorities both in his practice and the composition of his manuscript, at a time when historians have generally assumed that reliance on Latin was waning in favour of vernacular English texts. Moreover, it offers insights into the variety of documents grouped together as casebooks. It has allowed me to identify sources and influences in Hall’s writing which would be invisible if only the English translation were presented.

Until now Hall’s manuscript has only been available in the original Latin, or the more widely used but incomplete and sometimes inaccurate seventeenth-century translations of James Cooke (?-1693). Cooke published two editions, both with titles

---

starting *Select Observations*. The second edition (1679) has twice been reproduced in facsimile in the twentieth century, by Harriet Joseph and Joan Lane. In this thesis, *Select Observations* without other description always refers to the second edition. The first is always noted as such.

James Cooke was for most of his life a surgeon, later a physician, attached to the household of the Brooke family at Warwick Castle. He served as surgeon to the parliamentary forces under Baron Brooke’s command which were based in Warwick during the civil war. Using that experience he published a book on surgery, *Mellificium chirurgiae*, in 1648.

It was in his capacity as military surgeon that he came to Stratford-upon-Avon in 1642 and acquired Hall’s manuscript.

**1. CONTENTS OF THESIS**

My thesis may be considered in two parts. The first part covers the Background to the critical edition and the critical edition itself. The critical edition is then followed by two chapters which expand on different aspects of Hall’s writing.

---

9 John Hall, *Select Observations on English Bodies: or, cures both empiricall and historicall performed upon very eminent persons on desperate diseases*, trans. and ed. by James Cooke, 1st edn (London: John Sherley, 1657); John Hall, *Select Observations on English Bodies of Eminent Persons in desperate Diseases ... to which is now added, an hundred like Counsels and Advices, for several Honourable Persons: by the same author*, trans. and ed. by James Cooke, 2nd edn (London: Benjamin Shirley, 1679); a third edition (1683) is identical to the second except for the title page.

12 James Cooke, *Mellificium Chirurgiae, or the Marrow of many good authors, wherein is briefly and faithfully handled the Art of Chirurgery* (London: Samuel Cartwright, 1648).
1.1 **The Critical Edition**

Hall’s manuscript is of middling size as casebooks go, running to about 40,000 words. It is small enough to be contained in a critical edition and large enough to justify the effort involved.

The Background starts by describing the manuscript, then gives its history from its composition to its arrival in the British Library. It outlines the reasons why a new edition is required and describes the editorial principles and practice followed. An outline of some recurring themes in the manuscript introduces Hall’s thinking and practice. The appendices are then summarised. They contain details of the process by which borrowings were identified; changes to the identification of some patients compared to Lane’s; a guide to the contents of Hall’s compound remedies; and a glossary of medical and pharmaceutical terms based on early modern texts. The Libellus and Little Book are then presented in parallel, each with a critical apparatus. Footnotes to the Latin identify the texts which Hall borrowed and their sources. They make up a considerable proportion of the whole text. The Latin apparatus is concerned with matters of readings in the manuscript. Footnotes to the English compare important points at which the new translation differs from Cooke’s *Select Observations*, either because of his omissions or inaccurate translation. The English apparatus identifies some individuals such as other physicians mentioned in the text and provides other background information.
1.2 Chapter 1: The Identification of John Hall’s Working Library

This chapter starts with the process of identifying the books Hall used in his working practice and his manuscript. I have used references in Hall’s manuscript (which Cooke deleted from Select Observations) as well as systematic searches on the internet to show that between thirty and forty per cent of the text of Hall’s manuscript is based on borrowings from Latin medical sources. Hall’s working library is shown to contain forty-three identified authors and sixty titles, as against the six authors mentioned in Select Observations.\(^\text{13}\)

I refer to Hall’s working library, because he must have owned other texts which he chose not to use or record, or which have not yet been identified. All were written entirely in Latin, except for one French and three English texts. The working library shows that Hall relied on Latin texts throughout his working life, at a time when the commonly held view is that vernacular texts were replacing Latin ones in medical practice. Hall is likely to be an exception in the extent to which he utilised medical texts in this way, but I offer some evidence that he was not unique.

The analysis of these borrowings and their sources draws on the history of books and reading, with its origins in the French Annales school.\(^\text{14}\) Important sources are the collections of inventories, libraries and booklists which have been published in

---

\(^{13}\) Joseph, *Shakespeare’s Son-in-law*, p. xiii.

recent years. These provide much information for the sixteenth century, but become much more sparse in the early seventeenth century. Few medical libraries are known from that period so Hall’s, even if incomplete, is an important addition.

I then consider studies of early modern Latin medical writing, which have come mostly from the school of the history of ideas. These Latin texts have been well studied, but with a focus on their theoretical content rather than their practical medical applications. Hall’s borrowings show that they were important as sources of practical information.

Hall’s books mostly fall into commonly identified categories of practical books of the period – *consilia*, *practicae*, *curationes* and *observationes*, pharmacopoeias and works on chymical practice. Books on single topics – illnesses or groups of patients – also made up a large proportion. Pomata has suggested that these are more than categories, but represent ‘epistemic genres’ used with particular meaning by people within a certain culture – in this case,

---

the European-wide learned medical community. I argue against this because many books contain mixtures of different categories, so that the style of their content does not always match that suggested by the titles. The way books were listed in seventeenth-century bibliographies bears this out, as their compilers used a wide variety of titles for their groupings, with little sign of standardisation. Rather than being fixed genres, medical categories were flexible and often mixed together, showing an eclectic approach by their users.

Evidence for Hall’s possible connexions to the book trade also come from studies of libraries and books. London was the centre of the book trade in England, including importation of books from the Continent - the ‘Latin Trade’. Identifying and buying a book was not necessarily an easy task for a provincial gentleman like Hall. Pedlars and chapmen travelled widely outside the main towns, but their wares were cheap and popular rather than learned. Oxford on the other hand was both nearer to Stratford-upon-Avon and well-provided with booksellers. It was a distribution centre of books for the surrounding area. In addition the Bodleian Library had opened in 1602 and was regularly receiving Frankfurt Book Fair

---

18 Pascal Lecoq, Bibliotheca medica sive catalogus illorum, qui ex professo artem medicam in hunc usque annum scriptis illustrant (C. Waldkirch: Basel, 1590); Georg Draud, Bibliotheca Classica, sive Catalogus Officinalis (Pierre Kopf: Frankfurt, 1611); Georg Draud Bibliotheca classica, sive catalogus officinalis (B. Ostern: Frankfurt, 1625).
catalogues and ordering books from there and elsewhere in Europe. Oxford might therefore have provided a quicker and more informative route than London by which Hall could keep in touch with current publications and make decisions on his purchases.

### 1.3 Chapter 2: John Hall’s Manuscript Considered as a Casebook

This chapter starts with an overview of references to John Hall’s casebook (almost always here in its *Select Observations* form). It has interested medical writers from the late nineteenth century and throughout the twentieth. These publications chart changes of attitudes from a time when *Select Observations* was still regarded as a textbook (if old-fashioned) through to a period when it was of more interest as a historical document. In the mid-twentieth century Hall was regarded as an important practitioner in advance of his time, but later writers have taken a more balanced view of him as offering examples of typical early modern practice.

In the 1970s and 1980s casebooks became essential sources for social and cultural historians of medicine, as a tool for researching patients as well as practitioners. They have remained an important resource ever since. Comparison of uses of *Select Observations* as a source suggest the change from a medically-

---

centred history of medicine to the more inclusive social history model was not as clear-cut in time as is often assumed.

Since the 1980s there has been a trend away from using small number of casebooks as sources in history studies, towards using much larger numbers. For instance Doreen Nagy used five in 1988 compared to Wendy Churchill’s more than forty in 2012.24 This has led to a need for more care in identifying casebooks. Lauren Kassell has proposed a definition (‘a serial record of practice’) and set of descriptions as a step towards agreeing a set of documents to work from.25 I argue that Kassell’s definition is useful as a good broad starting point, but the characteristics of individual casebooks such as Hall’s need to be identified and studied more precisely. The purposes for which individual casebooks were created should be considered carefully. Translations and publications in particular should be treated with care. Most casebooks were written at least partly in Latin and much information may be lost if only English translations are relied on, without checking back to the original Latin. I also query the use of printed editions as casebooks, if they were not seen into print by their authors. This is a point on which Hall’s manuscript, published as a book nearly twenty-five years after his death, is well placed to illuminate.

Hall’s manuscript shows that a casebook covering a period of years may have an internal structure. Casebooks should not be

---

treated as undifferentiated wholes without careful examination of
their contents and chronologies. Changes in style and content
reflect the chronologies of both the original consultations and the
writing of the manuscript. The study within casebooks of change
over time may be as important as the study of differences between
them. I have benefited in this respect from Joan Lane’s careful
work in identifying patients and putting dates to consultations.\textsuperscript{26}
Her social historical approach to the past, though less popular
today, can still offer significant benefits to the study of casebooks.

2. METHODOLOGY

At the centre of this study, as stated earlier, is a single physician
and a single document. This thesis considers the document from
several different aspects which makes it difficult to isolate a central
historiographic theme. The provision of a new edition of Hall’s
manuscript is its main purpose, but in addition each chapter has
its own range of subjects and draws on its own methodologies.

My presentation of the manuscript as a critical edition differs
from most studies of early modern medical documents. As far as I
am aware it is only the third such study since the casebooks of
John Symcotts (c.1592-1662) and Thomas Willis (1621-1675) were
published. Neither of those could be described as a critical
edition.\textsuperscript{27} The edition of John Symcotts gives the complete text in

English and Latin, with English translations of the Latin in

\textsuperscript{26} Lane, John Hall.
\textsuperscript{27} F.N.L. Poynter, F.N.L., and W.J. Bishop, A Seventeenth-century Doctor and
his Patients: John Symcotts, 1592 – 1662, Publications of the Bedfordshire
Historical Record Society Vol. XXXI (Streatley: Bedfordshire Historical Record
Society, 1951); Kenneth Dewhurst, Willis’s Oxford Casebook 1650-52, (Oxford:
footnotes. Thomas Willis’s consultations have been published in an English translation but without the original Latin. Other studies of single authors have summarised and commented on the contents, but have not reproduced the complete original content. Given the size of some of the records such as those of Simon Forman (1552-1611), Richard Napier (1559-1634) and Theodore Turquet de Mayerne (1573-1655), this is understandable. Such works are more likely to be presented as on-line databases than in printed form in the future. Casebooks remain a staple resource in history but their usefulness relies on their texts being accessible and accurate, both in translation and transcription of the original Latin. I hope this edition of Hall’s manuscript will contribute to this.

Given the wide range of topics covered, from libraries and genres of books to meaning and use of casebooks, it is hard to identify any one common approach. Rather, I incline to take advantage of what Paolo Palladino has called the ‘anarchic proliferation’ of approaches within the history of medicine, and so ‘embrace a greater variety of theoretical aspects and methodological

---

29 For example, Lauren Kassell et al, The Casebooks Project.

Nonetheless some connecting spine between the different sections is required. Working from the focus on a single practitioner and single document, I find this in microhistory. In part my choice of this arose out of the contrast with other writers’ arguments for not using that methodology. Maclean in *Logic, Signs and Nature* followed a Weberian ideal-typical approach, suitable to his consideration of a large number of writers. He comments that ‘it would have been easier to have taken a microhistorical approach, and chosen a ‘one or a number of thinkers who could have been subjected to Geertzian thick description’.

Churchill, who has used an impressively large array of sources, notes that many of the studies of casebooks have focussed on single practitioners. She comments that ‘while this “micro” approach is extremely valuable in many ways, its narrow scope excludes questions regarding representativeness’. In my study, the narrow starting focus of microhistory is a positive choice.

In common with many approaches, methodologies and processes in history, microhistory tends to vary with the historian rather than being a consistent and stable package. For my guide into microhistory, I have chosen Giovanni Levi. Levi calls it a ‘historiographical practice’ without an established orthodoxy.

---

33 Churchill, *Female Patients*, p. 3.
importantly, ‘micro’ refers to the level of the historian’s engagement
with the subject matter, not the latter’s size.\textsuperscript{35}

I find some shared historical background between
microhistory and social history. Both developed in the 1960s and
1970s as a reaction against prevailing models. Social history
celebrated the break between medical history as practised by
medically qualified historians (seen as concentrating on elite male
practitioners and medical progress) and a broader history of
medicine practised by non-medical academic historians (with an
interest in patients, practitioners of all sorts, the place of women in
medical care and other subjects, all placed within the values of their
own time). It came with a belief that a radical challenge was needed
to the older approach: ‘the political activism of the period easily
justified the task, while the task justified the activism’.\textsuperscript{36}

Microhistory arose (mainly in Italy) as part of a social movement
which challenged prevailing political systems. Microhistory had a
political element and was ‘not a purely rhetorical and aesthetic
activity’.\textsuperscript{37}

For Levi, the defining features of microhistory start with ‘the
reduction of the scale of observation ... and an intensive study of
the documentary material’.\textsuperscript{38} This is not to say that large-scale
social structures cannot be studied using microhistory, but that a
focus from a small scale outwards can be as rewarding as one from
a large scale inwards. As Levi puts it, it may ‘reveal factors

\textsuperscript{36} Roger Cooter, ‘After Death/After-Life: The Social History of Medicine in
Post-Postmodernity’, \textit{Social History of Medicine}, 20 (2007) 441-464 (pp. 442-
443).
\textsuperscript{38} Ibid., p. 99.
previously unobserved’.\textsuperscript{39} There is a parallel here with Roy Porter’s seminal and influential concept of doing the history of medicine ‘from the bottom up’.\textsuperscript{40}

The place of narrative, of telling a story, in microhistory is useful to me here. Narrative can demonstrate as Levi explains ‘by an account of true facts, the true functioning of certain aspects of society which would be distorted by generalisations’,\textsuperscript{41} It also recognises that the presentation of those facts is influenced by the presenter. Instead of a ‘traditional, assertive authoritarian form of discourse ... the researcher’s point of view becomes an intrinsic part of the account. The research process is explicitly described and the limitations of documentary evidence ... are no longer hidden away’.\textsuperscript{42}

The narrative approach is appealing in this study, because of the wide range of timescales encompassed. The longest time span belongs to Hall’s books: the oldest he used had been published in 1550 and the latest, in 1633. The shortest time span is that within which Hall composed his manuscript, in 1634 and 1635. His practice started in Stratford-upon-Avon not later than 1607 and continued to 1635, the year of his death. The earliest datable consultation in the manuscript took place in 1611 and the latest in 1635.\textsuperscript{43} Each of these time spans has its own narrative, which weaves in and out of the others.

\textsuperscript{39} Ibid.’, p. 101.
\textsuperscript{42} Ibid., p. 110; Levi goes on to apply this ‘by informing the reader that my guiding principles are strongly personal ones; this is a self-portrait rather than a group portrait’, pp. 114-115.
\textsuperscript{43} Wells, ‘John Hall’.
My final emphasis is, as I started, on a single practitioner and a single manuscript. I hope this critical edition will help to make Hall’s manuscript an even more useful part of the study of early modern medical practice than it has been in the past.
BACKGROUND TO THE CRITICAL EDITION

John Hall’s manuscript is central to this thesis. It is the one record we have of his authentic voice, even if expressed at times in the words of others. Here I describe the manuscript, summarise its history and give my reasons for offering a new translation. I then summarise some of the themes which run through Hall’s reports, illustrative of his thinking and practice. Finally I lay out the editorial principles and practice I have followed, before presenting the critical edition itself.

I use the following terminology to distinguish between different versions of the text. Hall’s original text as he wrote it is referred to as his manuscript. My Latin transcription is the *Libellus*, using the word in Hall’s title, while the English translation is the *Little Book*. Where there are quotations from the *Little Book* in the text below, I have placed the equivalent Latin from the *Libellus* in a footnote. This serves to emphasise once again the importance of the Latin as Hall’s own words, distinct from the translation.

References to *Select Observations* are to the second edition unless the first is specifically mentioned.

1. **JOHN HALL’S MANUSCRIPT**

1.1 **Description And Contents**

John Hall’s manuscript is contained in a small notebook, measuring approximately eighteen by ten centimetres. It is now in a leather binding marked ‘British Museum’ (from around 1868 before its transfer to the British Library) with the title ‘Case Book of Dr John
Note the legible handwriting with many abbreviations, Hall’s original page numbering (1) and that added later (2). The first case report has no separate heading and starts with the patient’s identity.

1 BL, Egerton Ms 2065, p.1.
Hall’ on the spine.² It is complete, with no missing pages. The paper has faded to a light brown with only a few stains and blemishes. The top, bottom and sides of each page have faint ruled margins and the text, written in ink now faded to a dark brown, mostly stays within them. There are few corrections and no deleted text apart from occasional corrected words. Hall consistently recorded dates in the new style, with the year starting on 1 January. He wrote in an italic hand which becomes more legible with practice at reading it, but containing many abbreviations and errors in grammar.³ Hall’s writing is on the whole tidy and formal with well-spaced lines. Occasionally it becomes more crowded and uneven, before Hall returns to his initial tidiness. The writing is consistent throughout with no evidence of deterioration from beginning to end.

The numbering of the manuscript’s pages is complex. At the front there are five unnumbered pages, three blank followed by one stamped ‘E.G.2065 (Farnb.)’ and written below, ‘purchased by Mr Paterson 10 Oct. 1868’. There follows another blank page before Hall’s text starts with an unnumbered page of epigraphs and a further blank page. At the end of the manuscript there are five unnumbered pages, the first bearing a pencilled note, ‘131 folios HK November 1869’. The remaining four are blank.

² BL, Egerton MS 2065.
³ Cooke referred to it as ‘abbreviated and false’: Hall, Select Observations, sig. A3v.
Note the less tidy handwriting than on page 1, changes in the text and a separate heading referring to the illness at the start of Case 74.

---

4 BL, Egerton MS 2065.
The pages of Hall’s text in the centre of the manuscript are numbered in two systems. One, in pencil and a similar hand to the note dated November 1869, run from folio 1r (Hall’s epigraph page) to folio 131v. This is presumably an editorial addition from the time of its ownership by the British Museum. Hall’s own numbers start with 1 on his title page (f.2r) and run to the end of his text, a total of 191 pages. His numbering went awry towards the end, the last five pages running 187, 187 (duplicated), 188, 199 and 200. Hall did not number his page of epigraphs nor the page after them (ff.1r-1v) preceding his main text. He started an index but left it unfinished, on folios 123r to 129r. I have not included this in the critical edition as it is adds little information.

Several of the other pages of writing can be firmly associated with James Cooke. He wrote his name four times, in whole or part, on the epigraph page. The next page contains two short recipes and a note ‘Mr John Sherley Golden Pelican in Little Britain’ in a different hand. John Sherley was the publisher of the first edition of Cooke’s translation. Between the end of Hall’s text and his index are a mixture of consultation and other medical notes in English and Latin. Three reports, (folios 105v-106v) are dated 7, 23 and 24 January 1656, when the book was in Cooke’s possession. All the patients lived in or near Warwick, where Cooke practised. Further medical notes in Cooke’s hand and two pages on the Hebrew alphabet and grammar occupy a few pages after the index and before the final blank pages.

The dates of composition of the manuscript can be quite tightly limited. The consultation with Ann Smith (Case 3) has been
dated by Joan Lane to 1634, meaning that the bulk and probably the whole, of the manuscript was written during 1634 and 1635.\textsuperscript{5}

The chronology of the consultations and the composition of the manuscript is described in more detail in Chapter 2.

1.2 History of the Manuscript

John Hall’s nuncupative will of 25 November 1635 contains the earliest mention of his books and papers:

concerning my study of books I leave them (sayd he) to yow my sonn Nash [Hall’s son-in-law Thomas Nash] to dispose of them as yow see good. As for my manuscripts I would have given them to Mr Boles [unidentified] if hee had been here but forasmuch as he is not heere present, yow may son Nash burne them or doe with the them what yow please.\textsuperscript{6}

No probate inventory survives to provide details. The next reference to the manuscript is found in James Cooke’s preface to the first edition of \textit{Select Observations}.\textsuperscript{7} Some of the books and manuscripts must have remained with his widow Susanna, rather than with Hall’s son-in-law, according to James Cooke’s description of how he acquired them:

Being in my art an attendent to parts of some regiments to keep the pass at the bridge of Stratford upon Avon [around

\textsuperscript{5} Lane, \textit{John Hall}, p. 9.
\textsuperscript{6} Prerogative Court of Canterbury, 115 Pile, quoted in Marcham, \textit{William Shakespeare and his Daughter}, p. 25.
\textsuperscript{7} Cooke was a surgeon with the parliamentary forces based in Warwick during the Civil War, and already the author of a textbook on military surgery; James Cooke, \textit{Mellificium chirurgiae, or the Marrow of Many Good Authors, wherein is briefly and faithfully handled the Art of Chirurgery} (London, Samuel Cartwright, 1648).
1642], there being with me a mate allyed to the gentleman that
writ the following observations in Latin, he invited me to the
house of Mrs Hall wife to the deceased, to see the books left by
Mr Hall. After a view of them, she told me she had some books
left, by one that professed physick, with her husband, for
some money. I told her, if I liked them, I would give her the
money again; she brought them forth, amongst which there
was this with another of the authors, both intended for the
presses. I being acquainted with Mr Hall’s hand, told her that
one or two of them were her husbands, and shewed them her.
She denyed, I affirmed, till I perceived she began to be
offended. At last I returned her the money.

This passage has caused much debate among Shakespearian
scholars: how could Susanna Hall not have known her own
husband’s writing? And what speculations might we make from that
about her literacy? Lachlan Mackinnon argues convincingly that
she was literate and simply ‘couldn’t be bothered with someone
fossicking after her husband’s papers’. My own interpretation is
that Mrs Hall thought Cooke was only interested in buying printed
books and tried to pass her husband’s manuscripts off as such.
Once it became clear that Cooke was interested in the manuscripts
as such, the misunderstanding was cleared up. He purchased them
and perhaps other books as well.

8 Cooke, ‘To the Friendly Reader’ in Hall, Select Observations, 1st edn, sig.A3r-A4r.
9 Lachlan Mackinnon, ‘His Daughter Susanna Hall’, in Edmondson and Wells (eds), The Shakespeare Circle, p. 81.
James Cooke was a surgeon with ambitions to be a physician (he was licensed in 1661). Perhaps he saw translating and publishing a medical text as a step towards this. At any rate he:

resolved to put it to suffer according to perceived intentions, to which end I sent it to London which after viewed by an able doctor, he returned answer, that it might be usefull, but the Latin was so abbreviated or false that it would require the like pains as to write a new one.10

Fortunately, Cooke ‘put it into this garb, being somewhat acquainted with the author’s conciseness, especially in the receipts, having had some intimacy with his apothecary’.11

The next reference to the manuscript is in Edmond Malone’s edition of Shakespeare’s plays (first published in 1790):

The private note-book of [...] Dr Hall, containing a short state of the cases of his patients, was a few years ago put into my hands by my friend, the late Dr Wright; and as Dr Hall [...] undoubtedly attended Shakspeare in his last illness, being then forty years old, I had hopes this book might have enabled me to gratify the publick curiosity on this subject.12

Malone’s hopes were dashed: there is no mention of the playwright in the manuscript, an omission which has engendered pages of speculation ever since. According to Joan Lane, the manuscript had been owned by the actor David Garrick prior to Malone. It

10 Ibid., sig.A3v-B1r.
11 Ibid., sig.B1r.
finally reached the British Museum in 1868, before being transferred to the British Library.\textsuperscript{13}

1.3 The Need for a New Edition

James Cooke’s translation in the second edition of Select Observations has been the standard version of Hall’s manuscript since 1679. Historians have too easily taken it for granted that the translation was both accurate and complete, without comparing it with the original Latin. Joan Lane made more effort than most to compare Select Observations with Hall’s manuscript, but her main interest was in the identity of his patients. Her comments in John Hall show that she tended to look only at the opening and closing paragraphs of each report in the Latin as they contained the most patient information. She did not read through all the text in the longer cases.

Cooke’s translation contains both errors and omissions. One error is Cooke’s attribution of the cure of Earl of Northampton (Case 137) to the Oxford physician Dr Clayton rather than to Hall himself. Equally significant are Cooke’s omissions which affect the balance of the text. Hall recorded several conversations with patients, either at the time of consultation or at follow up. Cooke radically abridged these, turning consultations into brisk medical summaries, but in the process losing much of Hall’s personal views on his relationships with patients. These deletions may be explicable as removing matter of little interest to a late seventeenth-century medical readership, for whom the identities of patients would not

\textsuperscript{13} Lane, John Hall, pp. xxx-xxxi.
have been relevant as evidence of successful therapies (this is discussed more fully in Chapter 1). Two other categories of omission, of references to named authors or books and of texts on theory, are more likely to be Cooke’s editorial policy. The inclusion of these would have weakened Cooke’s deliberate presentation of Hall as a physician dependant almost entirely on empirical practice and observation. This is expressed in the words of Cooke’s colleague John Bird of Cambridge, in a foreword to the first edition:14

For this book, I have this to say, that as Practice is the last and chiefest part if Physik, so is Observation the surest, and most demonstrating, part of Practice. Hence it cometh to pass through defect of Observations, that so many Prescriptions we meet with in the works of the most learned Practitioners, fall often short in performing the cures they promise, and we took them up for; so often delivering us as their own what they took from other men upon Trust.15

Hall’s practice, as Chapter 1 shows, was undoubtedly based on ‘the works of the most learned practitioners’.

Casebooks are becoming more closely studied and compared, as discussed in Chapter 2, but this will only pay dividends if the texts used are accurate and complete and their mode of composition

taken into account. This is not a purely theoretical argument, as the two following examples show.

Doreen Nagy used Hall’s treatment of acute urinary retention (John Smith, Case 66) with diuretic herbs and local heat applied to the perineum by a hot fried onion as an illustration of cures available to both learned and other practitioners.\textsuperscript{16} Nagy wrote of this, that ‘Doctors’ records ... illustrate the striking similarity between their treatments and those used by lay practitioners’, but gave no evidence for this treatment being used by anyone other than Hall.\textsuperscript{17} She seems to have taken it as self-evident that a therapy based on fried onions must be rooted in popular tradition. Hall in fact took this remedy almost verbatim from Ruland the Elder’s \textit{Curationum}, so despite appearances it is part of the learned Latin medical armamentarium.

Wendy Churchill supports her argument that melancholy and the mother co-existed with a quotation from \textit{Select Observations} (Mrs Peerse, Case 123).\textsuperscript{18,19} Cooke’s words are that ‘from her Melancholy she fell into the Mother’, but Hall’s Latin reads ‘ob maerorem in suffocationem matricis incidebat’ (on account of grief she fell into a suffocation of the mother). In two other reports Hall used maeror for the emotion of a parent at the loss of a child. Lady Browne’s scurvy (Case 162) was brought on by grief at the death of her daughter. Similarly Bishop Thornborough’s grief over his son’s suicide caused first severe melancholy and then scurvy (Case 164).

\textsuperscript{16} Nagy, \textit{Popular Medicine}, p. 44.
\textsuperscript{17} Ibid., p. 43.
\textsuperscript{18} Churchill, \textit{Female Patients}, p. 189.
\textsuperscript{19} ‘The mother’ means illness caused by supposed movement of the womb from its normal place within the abdomen. See Appendix D for more details.
Melancholy and grief are not synonymous. The report on Lady Browne’s illness describes melancholy in a way which brings out its physicality:

The source of scurvy in the spleen produces a flatulent melancholy, since the regions of the hypochondria encircle the spleen. The melancholy bubbles up in the meseraic veins around the pancreas and putrefies as if it were fermenting.20

In these illnesses, as with Mrs Peerse’s, the relationship is between a strong emotion (grief) and physical illness (melancholy and/or scurvy). This is not to deny Churchill’s argument for a relationship between melancholy and the mother. Another report is much more supportive of Churchill’s argument in Hall’s manuscript. Hall made the relationship between the mother and melancholy explicit in another report (Mrs Baker, Case 127) which is headed ‘cure of a fit of the mother, that is, melancholy’,21 Cooke’s translation loses this close link (‘troubled with the Mother, Melancholy’).22 The issue is a complex one involving powerful emotions interacting with illnesses which had both physical and psychological components.

2. EDITORIAL PRINCIPLES

This edition has taken account of the considerable literature on the preparation of editions of early modern texts. My starting point has been Michael Hunter’s Editing Early Modern Texts.23 I have adapted

---

20 *Libellus*, p. /159/: flatulentam melancholiam parit minera scorbuti siquidem circumscripta sedibus hypochondriorum in liene. Mesareo circa pancreas ebulliat [...] ac putrescens veluti fermentetur.
21 *Libellus*, p. /114/: hystericae passionis, id est melancholiae cura.
23 Michael Hunter, *Editing Early Modern Texts* (Basingstoke: Palgrave Macmillan, 2009); other useful sources of information have been Michael Hunter, ‘How to Edit a Seventeenth-century Manuscript’, *The Seventeenth*
both Hunter and the principles described in more recent works to
the needs of the present enterprise. A major development in the
past two decades has been the increasing availability of digitised
copies of original documents. This trend has undercut the need for
facsimile or semi-facsimile editions and allowed readability to
become a more important goal. Thus an edition of John Locke in
1990 aimed ‘to provide a full and accurate transcriptional record’
and ‘a completely faithful representation of the originals’.24 For the
edition of Joseph Justus Scaliger’s correspondence in 2012, ‘the
editors believe that readers are best served by a text as free as
possible from distractions’.25 I have followed recent trends and
concentrated in both Latin and English on readability, of which
accuracy is of course a part. The present edition makes no attempt
to offer a diplomatic transcription of the text or to follow the
vagaries of Hall’s spelling. Details of how this has been applied are
given in the sections below.

3. EDITORIAL PRACTICE

In the critical edition I refer to the Latin transcription as the
Libellus, using the title Hall gave his text. The translated text has
the English equivalent, the Little Book. I use ‘manuscript’ to refer to
Hall’s own document, to emphasise its importance as the only

24 John Locke, Drafts for the Essay Concerning Human Understanding, and
Other Philosophical Writings, Vol. 1, edited by Peter H. Nidditch and G.A.J.
25 The Correspondence of Joseph Justus Scaliger, edited by Paul Botley and
record of Hall’s own words. The *Libellus* is already one step and the *Little Book* two steps removed from that.

A major feature of Hall’s manuscript is that a large proportion of it consists of silent borrowings adapted to suit Hall’s context from other, predominantly medical texts. I have signalled these borrowings by putting them in italics in both the *Libellus* and *Little Book*. Each borrowing is referenced in the *Libellus* footnotes. Hall gave no reference for most of his borrowings and they could only be identified by repetitive on-line searches. A full description of the method used in the searches is given in Appendix A. My identification of borrowings has been conservative, erring on the side of excluding possible sources rather than including uncertain ones. Only borrowings safely attributable to a single source are included, so several for which two or more identical sources were identified are not shown. The more sources are identifiable, the less certain any of them become and the more likely that the phrase was one in common usage rather than specific to a certain source. A minority of Hall’s borrowed remedies are identical to the original text. More frequently he added or subtracted ingredients to suit his patient. These remedies are identifiable by their mixture of fonts.

The manuscript also contains a small number of phrases from classical Latin authors such as Cicero. I have little knowledge in this sphere and may well have missed others, but those I have identified are italicised. I refer to these as echoes to distinguish them from Hall’s borrowings. None of them are beyond the scope of someone with a Cambridge M.A. They are more likely to reflect
Hall’s university education than to be deliberate borrowings from identifiable sources as the medical borrowings are.

The edition is presented as parallel texts on facing pages, the *Libellus* on the left and the *Little Book* on the right. The editorial issues for the Latin and English differ, so are described separately. The English text has been synchronised, as far as possible, with the Latin parallel text. Perfect synchronisation is not possible because of the differences between Latin and English. My primary aims have been never to have more than two lines’ difference from one page to the next, and to ensure that cases start in parallel or very close to each other.

### 3.1 The *Libellus*

Abbreviations are silently expanded and catchwords silently omitted. Hall tended to start words at the end of lines, then cross them out and start again at the beginning of the line below. These false starts are silently ignored. Simple spelling errors are silently corrected where there is no ambiguity about the meaning. In the case of ambiguous readings (mostly related to the expansion of abbreviations) I have presented my preferred reading in the text and the alternative in the apparatus. Where Hall has deleted a word and replaced it I have given only the replacement unless the change was substantive (such as several substitutions of variola (smallpox) for morbilli (measles).

Lineation is not retained or recorded. Hall’s page numbers are given within solidi and bold at the appropriate point in the text (e.g. /5/). Internal references follow Hall’s own page numbering but
are not in bold (e.g. ‘as on page /5/’). I have also used Hall’s own page numbering when giving references to the *Libellus* or *Little Book* in footnotes.

Punctuation is editorial, though I have tried to be sensitive to Hall’s usage. My major change relates to paragraphs. Hall tended to write his text almost continuously throughout a case, except that in about ninety per cent of occurrences the ‘recipe’ symbol (℞) stands at the start of a line, before a list of ingredients. I have placed all instances of ℞ at the start of a line, otherwise the text is divided into paragraphs following the sense.

The ‘℞’ (for ‘recipe’) is the only pharmaceutical symbol retained, as a marker for remedies in the text, an aspect of the manuscript which was clearly important to Hall. It also serves to distinguish between ‘take’ (recipe) as an instruction to a pharmacist making up a remedy and ‘take’ (capiat) as an instruction to a patient.

Hall was not consistent in his methods of indicating pharmaceutical quantities. Ounces might for example be written in full (uncias), abbreviated (unc.) or shown as a symbol (.vol.). The printing in Hall’s sources was equally eclectic, with all three variants (the full word, an abbreviation or a symbol) sometimes occurring in the same remedy or even the same line of text. I have standardised them all as abbreviations. The relationships between the measurements are shown at the foot of Appendix C. Hall’s use of ‘j’ has been standardised to ‘i’, except when it occurs in an
English name, and ‘v’ and ‘u’ have been standardized as consonants and vowels respectively.

Hall used round brackets (...) for his own comments and this has been retained. Square brackets indicate editorial matter. Their commonest use is [...], to indicate where Hall has omitted some words in the middle of a continuous piece of borrowed text. Hall was often highly inventive in his use of borrowed material, sometimes combining matter from several sources to create his own text. He sometimes inserted a short borrowing into the middle of a longer continuous one, to create a single sentence. I have marked the interpolated borrowing by enclosing it in curly brackets {...} to simplify references and aid the identification of sources.

Pharmaceutical Latin has some peculiarities of its own. Most instructions for making remedies are given in the present passive subjunctive, for instance coquantur, which is most literally translated as ‘let them be boiled’. I have used a simple imperative for these, ‘boil’, to avoid a usage uncommon in present-day English. Two verbs, bullio and capio, are treated differently. For these words standard pharmaceutical usage from Hall’s time into the early twentieth century has been to use the active present subjunctive instead: bullia(n)t (let it/them boil) and capiat (let him/her take, as an instruction to a patient). Hall commonly wrote capiet (active future indicative) but I have taken this to be a quirk of his spelling and silently amended it capiat. I have not found capiet used in this sense in any seventeenth-century medical texts.

The small number of English words originally in Hall’s manuscript are underlined. Hall’s rare borrowings from a French text are shown in Italic in the same way as the Latin borrowings.

3.2 Footnotes to the Libellus
The numbered footnotes identify and document the sources of Hall’s borrowings. The original text is reproduced with its original spellings and abbreviations so that they can be checked against my expansions and Hall’s changes. The only exception is for pharmaceutical quantities which have been standardised to abbreviations in the same way as in the Libellus. Where no text is shown in a footnote, it indicates that Hall’s words in the manuscript are identical to those in his source. Hall’s borrowings omitted all Greek words in his sources, but these are included in the footnote texts.

Among Hall’s sources there is one potential ambiguity, the presence of two Martin Rulands, father and son. They are distinguished as Ruland the Elder and Ruland the Younger.

3.3 Apparatus to the Libellus
Hall’s handwriting was in the main a clear italic and my increasing familiarity with it reduced the number of ambiguous readings. In the few cases in which a word is illegible or uncertain it is shown as [xxx], with the nature of the problem described in the apparatus.

Uncertain and ambiguous readings and editorial emendations to the text which call for explanation are also noted. This includes all substantive changes, where an alternative reading
would produce a different meaning. Words in the margins have been included at the appropriate point in the main body of the text and recorded as marginalia in the apparatus.

Changes by Hall to borrowings which have a significant effect on the meaning are also noted. Interlineations, in Hall’s manuscript always superscripts, are recorded as \..../. All instances of Hall’s use of alchemical symbols as opposed to words are noted. I have not been able to explore these as much as I wish, but believe they may be the key to identifying further borrowings, by distinguishing between the more overtly chymical texts which tend to use symbols and others which more commonly use words.

Hall was sometimes inaccurate in his references to page numbers and chapters when explicitly referring to the works of other authors. I have as far as possible excluded the possibility of these referring to alternative editions, but for the main sources affected, Severinus Eugalenus’s *De Scorbuto Morbo*, and Daniel Sennert’s *Tractatus de Scorbuto*, only one source for each is possible and each matches the majority of references. In most cases of confusion this is due to a simple transposition of digits. The correct reference in my judgement is shown in the text, with Hall’s version in the apparatus.

### 3.4 The Little Book

The styles of writing in Hall’s manuscript vary considerably, partly a reflexion of the mixture of his own notes with borrowings from texts. Some details, for instance references to the quality of urine and the number and quality of faeces, are given as short phrases rather
than complete sentences. The borrowings on the other hand are often lengthy and prolix. I have reflected both these styles in my translation. Hall manuscript also varies, sometimes within a single paragraph, in the use of the present or past tense. This may reflect carelessness on Hall’s part or alternatively may be the result of combining text from his original patient notes (in the present) with his retrospective rewriting, or of using borrowings which themselves used different tenses. I have mostly put texts into the past, except where the case for the use of the present tense has felt particularly strong.

Borrowings are shown in italic as in the *Libellus* but without indicating Hall’s omissions and without reference to sources. Titles of books are shown in a sans serif italic script, to distinguish them from the borrowings.

Some features of the translation need some explanation. Two relate to his patients’ socio-economic status. An unusual feature of Hall’s manuscript is his use of ‘virgo’ or ‘virgo intacta’ in relation to four female patients, not a usage I have come across in any other casebook. He recorded ages for three of them, all between 20 and 28 years. I have interpreted his phrase as a social reference to unmarried women of marriageable age rather than as a clinical and anatomical finding and have therefore translated it as spinster.

Hall was precise in his use of personal titles and for the most part a precise equivalent is available. A problem arises with the words *Generosus*/-a and *Magister*/-ra. Cooke translated both as Mr and Mrs, but that is to blur a distinction which was still important at Hall’s time. I translate them both as Mr or Mrs, but for patients
titled *Generosus/-a*, with the addition of ‘gentleman’ or ‘gentlewoman’ after the name, to emphasise the social distinction. This aspect is discussed further in Chapter 2. Hall gave male patients with knighthoods the title ‘Eques’, which I have translated as ‘Squire’.

Two others points are pharmaceutical. The pharmacopoeas of Hall’s time made a distinction between powders and species. The former refers to any ingredient which has been dried and powdered. The latter means a mixture of powders ready prepared to be made up into a remedy such as an electuary. I have signalled the difference by translating species as ‘powder for’ rather than just powder. Hall used an antimony cup on occasion to provoke vomiting in his patients. I have translated this as his ‘chymical cup’ rather than chemical, to make clear that he was not operating within the chemistry systems of later centuries. I have used ‘chymical’ elsewhere in the thesis in the same way.

### 3.5 Footnotes to the Little Book

Footnotes here have been used to provide additional factual information, including identifications of some individuals mentioned in the text. These include other physicians mentioned by name, and the few patients for whom I have proposed identifications or details different from Joan Lane’s. For easy reference, the details of all these patients are brought together in Appendix B.
3.6 Apparatus to the Little Book

The chief function of the apparatus is to key the text to Cooke’s translation in the second edition of *Select Observations*. I have keyed each of the cases to its numbering in *Select Observations*, which differs from Hall’s as Cooke reordered some cases and added some of his own. Substantive differences of meaning are noted. Inevitably, as we have worked from the same original, Cooke’s translation and mine are sometimes similar; where Cooke’s wording is appropriate I have not strained to find an alternative purely to avoid repeating him.

Throughout the apparatus, the abbreviation S.O. refers to the second, 1679, edition of *Select Observations*.

4. THEMES IN HALL’S MANUSCRIPT

It is easy, as I know from experience, to read a casebook such as Hall’s case by case, considering each as it relates to individual patients and therapies. Certain themes in Hall’s writing run across more than one case report and it is these more than the details of individual patients which provide an insight into his thinking and attitudes. Many, such as Hall’s conversations with patients, his relationships with other practitioners, and his uses of theory, were removed by Cooke from *Select Observations*. They are only to be seen by going back to his original text. I highlight certain of these themes here as an introduction to the reading of the critical edition.

A number of Hall’s patients were treated by someone else before turning to him. The other practitioners included an empiric (Lady Smith, Case 118), surgeons (William Clavell, Case 76 and Mr
Barnes, Case 81) and a midwife (Mrs Fiennes, Case 167). Hall recorded the prior treatment and his own successful therapy for each patient, but made no explicit criticism of the other practitioners involved, nor of their fitness to practice. Nor did he offer overt criticism of patients for consulting them. This contrasts strongly with the views of his Northampton colleague, John Cotta, who strongly disapproved of medical treatment being offered by anyone but a physician.27

In contrast to his dispassionate view of other practitioners, Hall regularly emphasised his successes where other experienced physicians had failed. Mr Harvey (Case 139) ‘received differing opinions from many physicians’.28 Mrs Woodward (Case 150) was treated by a physician, but ‘fell from the continual burning fever into a dangerous bastard tertian’.29 Mr Kimberley (Case 169) ‘took much from physicians, to no avail’.30 In each case Hall treated the patient successfully. The emphasis on the experience of other physicians is particularly noticeable in relation to the diagnosis of scurvy. Mrs Swift (Case 166) and Mrs Stoughton (Case 175) had both been ‘purged by an experienced physician’ before Hall made the correct diagnosis.31 One of his strongest statements relates to Dr Thornborough, Bishop of Worcester (Case 164): The deceptive

27 John Cotta, A Short Discoverie of Severall Sorts of Ignorant and Unconsiderate Practisers of Physicke in England (London: John Barnes, 1619)
28 Libellus, p. /128/: Multorum medicorum opiniones discrepantes habuit.
29 Libellus, p. /143/: Tunc a medico purgatione et venae sectione, a febre continua ardente ad tertianam notham incidebat pernitosam.
30 Libellus, p. /169/: A medicis multa incassum accipit.
31 Libellus, pp. /166/, /183/: Rite a medico experto purgata [Hall used the same phrase in both reports.]
appearance of the arthritis misled and toyed with his physicians, who were experienced and learned in traditional medicine’.  

Hall’s uneasy relationship with other physicians also comes through in the treatment of his own illness (Case 155) when his wife called in two other physicians. Though he referred to them as friends and took the remedies they prescribed, his summary of their efforts was less than gracious:

Before the physicians attended me, I took 10oz of blood from the hepatic vein, and the third day after that, leeches were applied to the haemorrhoidal veins […] but I give thanks first to God, then to the hartshorn decoction, and finally to the venesection.  

Hall offered no thanks to the physicians and does not mention their treatments among those he evidently regarded as successful. He comes across as the archetypal practitioner who is a difficult patient when ill himself.

Hall enjoyed making diagnoses which other physicians had missed, but was clearly worried when placed in the opposite position. The second Earl of Northampton (Case 137) suffered from a quinsy – a severe and potentially fatal sore throat. Hall wished to start with immediate venesection, but the Earl refused. Instead Hall applied a plaster, but after a troubled night the Earl requested advice from Dr Clayton of Oxford and ‘sent for him at precipitate

\footnotesize{\textsuperscript{32} Libellus, p. 169/: Falsa arthritidis imagine medicos eius decipiunt ludificantque, qui in veteri medicina expertes et docti.  
\textsuperscript{33} Libellus, p. 152/: sed antequam medici ad me veniebant, e vena iecoraria unc.vii sanguinis extraxi, et 3\textsuperscript{a} ab ista die, sanguisugae venis hemorrhoidalis applicata […] primo Deo, deinde decoctioni cornu cervi, postremo venae sectioni gratias ago.}
speed’. Hall then prescribed an unusual plaster, requiring two entire swallows’ nests ‘including straw, dirt and swallows’ droppings’, along with other ingredients. This was successful: ‘the Earl was satisfied with these prescriptions alone, before the Doctor arrived [...] he breathed and swallowed easily’. Hall’s relief at treating the Earl successfully before the arrival of a colleague (or rival) is apparent in the text. This is not evident in Select Observations because Cooke’s incorrect translation attributed the recipe and its success to Dr Clayton.

Hall also accepted patients’ self-treatment as a normal part of practice. As Elaine Leong and Sara Pennell put it, ‘the decision to call on the services of a physician ... or other forms of paid medical practice, usually followed the failure of domestic treatment’. This is evident in his reports on Mrs Kempton (Case 78), Squire Rainsford (Case 80), Mrs Randolph (Case 99) and the schoolmaster John Trapp (Case 177). Patients also sometimes queried or changed Hall’s prescriptions, with purgation or bleeding a particular issue. Mr Broad (Case 100) refused venesection and so ‘fell into a continual burning fever as I foretold’. On Hall’s next visit he was ‘in danger of death, unable to say anything. Immediately I cut a

34 Libellus, p. /125/: petit consilium Dr Clayton Oxoniae, misit celeri cursu.
35 Libellus, p. /125/: nempe stramine, luto et stercore hirundinum.
36 Libellus, p. /125/: Sed praescriptis contentus his solis ante adventum Doctoris [...] fauces apertae, tumor et inflammatio tonsillarum ac uvulae sublata atque facile traxit spiritum et facile glutivit, et mihi solarium magnum dedit, et postea saepe ingentes reddebat gratias.
37 Hall, Select Observations, p. 127: he sent for Dr Clayton from Oxford ... who prescribed the following Cataplasm [the swallows’ nest plaster], which delivered him from pain and danger.
39 Libellus, p. /84/: Phlebotomia neglecta, in febrem ut praedixi incidebat, ardentem continuam.
vein and bled to 10oz’, which worked well enough for Mr Broad to say that he was greatly relieved. The second Countess of Northampton (Case 144) ‘does not want to be purged, nor do I wish it’. She also disliked the barberry conserve which Hall prescribed and instead ‘took jelly of hartshorn shavings with marigold and crocus flowers’.41

As this shows, treatments were sometimes changed from those prescribed. Hall prescribed a mixture with oil of water-lilies for Grace Court (Case 143), ‘but since this oil was not to hand’ she used a mixture of oils of scorpions and almonds.42 For Mr Barnes’s toothache, ‘since I had no remedy to hand, I prescribed cold water held in the mouth and often spat out’, which worked well.43 The Reverend Holyoak’s son was prescribed a pomegranate syrup described as particularly suitable for measles but ‘this was not to hand’ so a different one was used ‘with happy effect’.44

Leong and Pennell have also documented the circulation and exchange of recipes both between lay people and from physicians to lay people.45 Hall referred to this explicitly in four reports. Two of them add an extra link to the chain, in that the transmitted recipe came originally from one of Hall’s printed sources. Squire Packington (Case 71) asked for something to restore his appetite and Hall prescribed pulvis senae Montagnanae (Montagnana’s

45 Leong and Pennell, ‘Recipe Collections’ pp. 137-143.
senna powder), using the recipe given in the 1613 edition of the *Pharmacopoeia Augustana*. Mrs Murden (Case 107) complained of giddiness and headache and was prescribed a laxative remedy taken from the Crato’s first Book of *Consiliorum et epistolarum*.

Hall recorded several consultations with child patients. His treatments of children for either fits or worms are good illustrations of what Hannah Newton calls ‘children’s physic’ in the seventeenth century.\(^{46}\) They also demonstrate his use of Latin texts to find therapies specifically intended for this age group. The Reverend Walker’s six-month-old son (Case 35) and two-year-old Lidia Trapp (Case 114) both suffered from fits. They received similar treatments, with sliced peony roots hung round their necks, peony powder sprinkled in their hair and an ointment of Venice treacle and peony root applied over the heart. The source of the latter two treatments was Felix Platter’s *Observationum*. The case these were borrowed from is headed ‘Epilepsia in infante’ and for both his patients Hall used the exact ingredients and quantities specified by Platter.\(^{47}\)

Several of Hall’s child patients suffered from worm infestations. Newton states that purgatives were generally not used in children, but Hall used them to expel the worms, favouring much milder ones than he used in adults.\(^{48}\) Four-year-old Winter (Case 40) and three-year-old Dixwell Brent (Case 94) both had a honey suppository based on a recipe in Platter’s *De Vitiis*. The one-year-old George Talbot (Case 56) and Mr Bishop’s six-year-old son (Case

\(^{48}\) Newton, *The Sick Child*, p. 76.
59) both received a milk and sugar enema. Mr Bishop’s son also had an linctus for his chest which contained two mild purgatives, manna and cassia. This recipe was taken, exactly as printed, from Vittori’s *De aegritudinibus infantium*.49

Hall did not give children modified versions of the much stronger purgatives he used to treat worms in adults. Mrs Bovey (Case 161) and Edith Stoughton (Case 170) received the identical treatment from Amatus Lusitanus, containing wormseed (a vermicide) and strong purgatives.50 Hester Silvester (Case 125) was treated with a different recipe from the same source. Mary Heath (Case 17) was treated with wax infused into a cooked apple, a remedy from Valleriola which Hall commended.

Hall occasionally recorded detailed conversations with his patients. The longest record relates to Dr Thornborough (Case 164). This covered the reasons for Hall’s diagnosis of scorbutic arthritis (missed by other physicians), some background theory on scurvy which evidently interested the Bishop, and the tragic story of his son’s suicide. In the consultation with Mrs Mary Talbot (Case 103) Hall’s diagnosis of long-standing scurvy led the patient to explain that she had indeed been treated for scurvy previously and ‘had been cured in the Archduke’s palace in the Low Countries two years

---

49 Leonello Vittori, *De aegritudinibus infantium tractatus* (Venice: Erasmus, Valgrisius, 1557) [http://books.google.co.uk/books?id=8Ao8AAAAcAAJ](http://books.google.co.uk/books?id=8Ao8AAAAcAAJ), accessed 26 April 2015, p.115.
previously’. Hall also noted the patient’s pride at carrying out his instructions to take exercise. He saw her at a relative’s house and ‘she thanked me greatly, and said she had walked three miles’. Hall also showed pleasure in treatments which both cured a patient and resulted in a successful outcome to pregnancy. He referred to a ‘beautiful baby’ twice, in the reports on Mrs Combe (Case 130) and again on the Countess of Northampton (Case 144):

She bore a beautiful daughter afterwards, and meeting in passing, I saw her carrying her beautiful daughter in her arms. She declared that she gave thanks to God and to me for her, because she had not thought that she could survive.

Here and in similar reports Hall showed a personal and sympathetic interest in his patients’ histories and outcomes. This is also evident in his comments on the death of Lady Browne’s daughter (Case 106) which ‘arose from the death of her beloved, beautiful and devout daughter, whose life (a year previously) changed to death in childbirth, and she sleeps peacefully with the Lord’.

A rather different theme in Hall’s manuscript is his applications of theory to his diagnoses and treatment. I use theory here in a fairly wide and general sense, to refer to any writing on causes of disease or differential diagnosis, as opposed to therapy of a specific illness. Readers of Select Observations may be forgiven

51 Libellus, p. /86/: respondit generosa, duabus ab hinc annis in Hollandea in Aula Archiducis curare.
52 Libellus, p. /87/: ingentis mihi reddebat gratias et dixit se ambulare tres mille passus.
53 Libellus, p. /137/: postea filiam peperit formosam, et me obiter illuc veniente in ulnis filiam formosam gestentem vidi, et dixit Deo et mihi gratias pro ea dabat, nam sentiebat se vivere non potuisse.
54 Libellus, pp. /91-92/: Haec omnia ex morte filiae charae, /92/ formosa et religiosa accidebant, quae vitam (anno ab hinc) cum morte mutavit in puerpera et placide cum Domino dormit; Hall refers to the daughtere again in another consultation with Lady Browne (Case 162), Libellus, p. /162/.
for thinking that Hall had little interest in this, an impression which is largely an artefact of Cooke’s editing. By my count the manuscript contains twenty references to theory as defined above. These are found in fifteen case reports.\(^5\) Of these, Cooke omitted all but three (Cases 4, 112, 175) from Select Observations and in only one (Case 112) translated the passage completely.

Hall made most references to theory in relation to the diagnosis of scurvy, mainly using Sennert and Eugalenus as his sources. These references are placed in texts at points where Hall is discussing his diagnosis and before proceeding to treatment. In two reports Hall gave references to the causes of scurvy.\(^6\) In another three he referred to differential diagnoses, distinguishing between scorbutic symptoms and conditions mimicking them.\(^7\) A sixth explains an unusual event, the occurrence of epilepsy during recovery from scurvy.\(^8\) The final two cases contain borrowings which describe the pathogenesis of scurvy caused by blockage of the meseraic veins and how melancholy vapours produced around the spleen spread the disease to all parts of the body.\(^9\)

In a different way, Hall appended borrowings relating to theory at the end of three reports. Mr Dyson (Case 16) suffered from abdominal pain relieved by eating, rather than brought on by it. Hall borrowed two paragraphs from a lengthy review of this unusual presentation from da Monte’s Consultationum.\(^10\) Jacob

---

\(^6\) Cases 154, 165.
\(^7\) Cases 106, 150, 167.
\(^8\) Libellus, p. /113/.
\(^9\) Libellus, Cases 150, 162, pp. /144/, /159/.
\(^10\) Libellus, p. /14-15/.
Ballard’s treatment for bloody flux (Case 112) finishes with a borrowing from Croll’s *Basilica Chymica* listing the differences between dysentery, lyentery and diarrhoea.\(^{61}\) The report on Katherine Sturley (Case 133), who complained of blood in the urine without pain, concludes with a list of Hippocratic aphorisms commenting on this presentation. Hall’s source for these was Willich’s *Urinarum probationes*.\(^{62}\)

What these examples show is that Hall did not draw on more theoretically orientated authors even when including theory in his reports. He took it from the same practical texts as he used for his therapies. He gave no explanation as to why he wanted to include theory in some reports, so the suggestions below can only be speculative.

In relation to scurvy, Hall’s references to Sennert and Eugalenus may have been intended (if his book had been published in his lifetime as he intended) to bolster his standing as a specialist in scurvy compared to other physicians. His borrowings and references emphasise his ownership and use of the best available texts on the subject. However important empirical observation might be, it had to be applied in the context of up-to-date book-learning in the traditional style if it was to play a part in establishing his credibility.

The reports in which Hall appended a text on theory at the end are different in content and style. I suggest that in these Hall is addressing himself in the first place, ensuring that he has not missed any important element in the causation and therefore

---

\(^{61}\) *Libellus*, p. /100/.

\(^{62}\) *Libellus*, pp. /119 - 120/.
correct treatment of the patients. This harks back to his epigraph based on one of Hippocrates’ aphorisms: ‘When a physician proceeds according to correct reasoning, even though he does not succeed every time, he should nevertheless persist in his course of action’. These may be reflective conclusions to reassure himself that in the context of unusual illnesses he has truly proceeded according to correct reason.

If these suggestions are correct, Hall used theoretical borrowings and references for two different reasons: to justify his claim to special knowledge of scurvy and to reassure himself (and his putative readers) that he had reasoned correctly.

What these extracts have in common is that they were all either removed entirely or drastically reduced by Cooke in *Select Observations*. This gives the text a very much less personal tone, more detached and clinical, while also making Hall more empirical and less dependent on texts. They show Hall as documenting his ability to make correct diagnoses in the correct way and also a man of emotions and feelings, concerned for his standing with colleagues and sympathetic to his patients in their sorrow and joy.

5. **APPENDICES**

Four appendices follow the critical edition.

Appendix A describes the methodology used to identify Hall’s borrowings.

Appendix B lists the patients for whom I have suggested a change in identification or personal details from those given by Joan.
Lane. It also gives the reasons for my changes. Lane’s identifications are for the most part unchanged, and I have used her information on dates of consultation extensively in Chapter 2.

Appendix C contains a list of the compounds Hall used, listed by the name used in the Little Book followed by the Latin equivalent and referencing a published source, usually a pharmacopoeia. This is intended to provide access to details of ingredients and manufacture if required, and does not imply that they are Hall’s sources. Simples are not listed as they can be found in any of the standard pharmacopoeias of the period.

Appendix D contains a glossary of technical medical and pharmaceutical terms. I have not included an explanation of the Galenic humoral system which was the basis of Hall’s pathology, as this is widely available in general texts on early modern medicine. Hall used a wide variety of words to indicate different varieties of fever (recurrent illnesses possibly but not necessarily associated with high temperature) and these may be unfamiliar. Hall also uses a number of words overlapping with present-day concepts but different in meaning (e.g. diabetes). I have taken descriptions of such words mostly from English books of Hall’s time, to convey a

63 Lane, John Hall; patient identification details are contained in her commentary on each case.
64 See: Mary Lindemann, Medicine and Society in Early Modern Europe, 2nd edn (Cambridge: Cambridge University Press: 2010) pp. 13-19; Nancy Siraisi, Medieval and Early Renaissance Medicine: an Introduction to Knowledge and Practice (Chicago: University of Chicago Press: 1990) pp. 104-106, 97-106; Andrew Wear, Knowledge and Practice in English Medicine, 1550-1680 (Cambridge: Cambridge University Press, 2000). For detailed discussion of the contrasts between different schools of thought in Hall’s period, see Maclean, Logic, Signs and Nature. It should be remembered that the humoral system was extremely complex, and that these are no more than brief summaries. For a good description of other elements of Galenic physiology and pathology than humoral, see Ian Johnston, Galen: On Diseases and Symptoms (Cambridge: Cambridge University Press: 2006).
sense of the meaning without introducing later interpretations. The most commonly used sources are *The Method of Physick* by Philip Barrough (active circa 1590) and *Praxis Medicinae, or the Physicians Practice* by Walter Bruele (active around the end of the sixteenth century). Bruele’s original Latin text was owned and well used by Hall, so is an appropriate source. A small number of other books have been used where necessary.

A Little Book of Cures Described in Case Histories and Empirically Proven, Tried and Tested in Specified Places and on Identified People

[Case 1] The [first] Countess of Northampton:

about 44 years old. 6 March 1622.

She is pious, good-looking, modest, well endowed and of excellent character though not very talented. While walking in her chamber she fainted suddenly, and lay without any movement or sense for almost half an hour. She bruised and cut her face on the rush flooring, then developed an inflammation leading to a copious and troublesome flow of rheum from the eyes, which rendered her whole.

---

Ad quam accersitus, integre ipsam liberavi, Dei nutu et sequentibus praesidiis:

\[℞:\] foliorum senae unc.i, agarici dr.iii, rhabarbari dr.ii, cinamomi unc.i.s. Infundantur per horas xii secundum artem in vini albi libras iii. Deinde colantur per saccum laneum [...] sexties vel septies, et dulcorentur lib.s \(\frac{2}{2}\) sacchari optimi in modum nectaris.\(^5\) Dosis unc.v bis in die, mane stomacho ieiuno, et circa horam quartam pomeridianam. Optime et sine torminibus purgata, 5 vel 6, et sic successive per 4 dies. Pro fluxu rheumatis refraenando, faciem illinire unguento albo camphorato iubebam. Facies 4 dierum spacio sanata.

Nondum satis corpus purgatum, pilulis sequentibus iterum purgata optime:

\[℞:\] pilularum Ruffi, de succino Cratonis ana partes aequales. Ex dr.i fiant pilulae 7. Hora cubitus iii devorari iubebam (sed quod mirum est, manducabat. Dixit se nunquam pilulam etiamsi parvam devorare potuit) et sic optime devorabat. Singulo die sequenti 6 vel 7 sedes, et sic bis in septimana. Die quietis usa est electuario chalybeato Cratonis cum sale cochleariae et absinthii et coralli, et omni 3\(^a\) nocte pilulas praedictas manducabat sine fastidio aut nausea. In iusculo hae herbae antiscorbuticae impositae fuerunt (nam medicamenta scorbutica cum ceteris admiscenda semper cum

---

face torn and ulcerated, and disfigured her. She has suffered from wasting and scurvy for a long time. She was then living at the Welsh Castle in Ludlow.

I was summoned to her and freed her entirely, by God’s will and the following remedies:

℞: senna leaves 1oz, agaric 3dr, rhubarb 2dr, cinnamon 1½oz.

Infuse according to practice in 3 pints white wine for twelve hours. Then strain six or seven times through a woollen bag and sweeten with ½lb \( \frac{1}{2} \) of good sugar in the form of nectar. Dose: 5oz twice a day, on an empty stomach in the morning and about four o’clock in the afternoon.\(^1\) She was purged five or six times, very well and without colic, and continued the course for the next four days. To control the flow of rheum, I instructed her to rub camphorated white ointment on her face. It healed within four days.

As her body was not yet adequately purged, she was very well purged again with the following pills:

℞: pills - Ruffus’s, Crato’s amber, in equal amounts. Make 7 pills from 1dr. I prescribed 3 to be taken at bedtime (but this was strange, she chewed them. She said she never could swallow a pill, even a small one) and she took them very well in this way. On the following day: six or seven stools, and continue twice a week. On quiet days she used Crato’s steeled electuary with salts of scurvy-grass, wormwood and coral. Every third night she chewed the

---

\(^1\)Clocks were becoming a feature of well-to-households in Hall’s lifetime so this way of expressing time is not anachronistic: Neil MacGregor, *Shakespeare’s Restless World* (Allen Lane: London, 2012) pp. 215-219.

8 woollen bag| S.O.: an Ippocras bag. 21 On quiet days| S.O.: those days she took not the pills. 23 Every third night| S.O.: omits.
sit aliqua scorbuti suspitio\(^6\) cochlearia, becabunga, nasturtium aquaticum, buglossa et ceterae eiusdem farinae.

Biream /3/ antiscorbuticam talem praescripsi:

℞:
cochleariae M.4, nasturtii aquatici, becabungae ana M.ii,
absinthii M.i, agrimoniae, betonicae, fumitterae, germandri ana M.i, radicum foeniculi, boraginis, eichorii ana unc.i,
enulae campanae unc.s, liquiritiae unc.i, florum boraginis, buglossae, rosmarini ana p.ii. Bulliant in congiis 5 cervisiae,
cum sequentibus sacculo inclusis: sarsaparillae, calami aromatici, cinamoni, macis, seminum anisi, foeniculi ana unc.s, baccarum iuniperi unc.8. Post ebullitionem, reservatur sacculus et suspendatur in birea flores cervisiarii, prius doliolo exonerati. Post 15 dies erit potus ad bibendum salutaris, et sic, omni alio potu interdicto per totum Aprilem, de hoc solo bibere vellem.

Dum birea ad bibendum idonea erat decoctione sequenti usa:

℞:
sarsaparillae unc.ii, guaiaci unc.i, radicis sassaphras dr.ii.

\(^6\)A similar idea, though not in the same words, is found in Matthaeus Martini, ‘De Scorbuto’, in Sennert, *De scorbuto tractatus* p. 708: semper etiam admixtis iis, quae scorbuto sunt dicata, illiusque malitiam infringere possunt [see also /102/].
above pills without disgust or nausea. These antiscorbutic herbs (because scorbutic medicines should always be added with others when there may be some suspicion of scurvy) were put in her broth: scurvy-grass, brooklime, watercress, bugloss and other stuff of the same sort.

I prescribed antiscorbutic beer of this sort:

℞: scurvy-grass 4 handfuls, watercress, brooklime each 2 handfuls, wormwood 1 handful, agrimony, betony, fumitory, germander each 1 handful, fennel, borage, chicory roots each 1oz, elecampane ½oz, liquorice 1oz, borage, bugloss, rosemary flowers each 2 pinches.

Boil in 5 gallons beer, with the following in a bag: sarsaparilla, sweet flag, cinnamon, mace, aniseed, fennel each ½oz, juniper berries 8oz. After boiling remove the bag and suspend in the beer brewer’s yeast previously discharged from a barrel. After fifteen days the beer will be wholesome for drinking, so I wished her to drink it alone, forbidding all other drink for the whole of April.

Until the beer was ready for drinking she used the following decoction:

℞: sarsaparilla 2oz, guaiacum 1oz, sassaphras root 2dr. Soak overnight in 15 pints spring water. The next day add scurvy-grass 2 handfuls, brooklime, watercress each 1 handful, betony, agrimony, each ½ handful. Reduce by boiling to 10 pints. After boiling, add currants 2oz, prepared coriander seeds 1dr. When boiled, remove from the fire, add bruised cinnamon 1dr. Strain through a sleeve. Take /4/ 6oz hot, in bed. Prepare the body for a

calidis leviter obvoluto. Corpus a sudatione siccis linteis mundis non admodum mollibus, sed asperiusculis abstergendum. Potus ordinarius ex secunda decoctione. In diebus in quibus non sudet, capiat succi cochleariae rite praeparati, coch. sex in praedicto potu, et in iusculo sal cochleariae.

His remediis, Laus Deo Optimo Maximo, rite curata, praeter expectationem Comitis et amicorum. Ludlowe.

℞: florum cassiae noviter extractarum unc.i, terebinthinae lotae dr.i, rhabbarbi sc.i, liquiritiae sc.s. Misce cum saccharo, fiat bolus. ℞: malvae M.i, liquiritiae unc.i. Bulliant in lib.ii lactis vaccini.

Colaturae adde /5/ syrupi altheae Fernelii unc.vi. Capiat omni mane unc.4 vel 5, et hora cubitus devoret in pomo sub cineribus cuito, dr.s terebinthinae Cypri in forma pilulae.

Et sic cito rite curatus. Ludlowe.

---

7 Solenander, Consiliorum [...] Solenandri, p. 258: composito corpore ad sudationem levem, ventriculo tecto capiteque et collo, linteis calidis leviter obvoluto. Corpus a sudatione siccis linteis mundis, non admodum mollibus, sed asperiusculum abstergendum. | 8 Bruele, Praxis medicinae, f. 2r: Illustrissimo heroi ac Domino D. Henrico Comiti Huntintoniensi, Hastingueae Domino, etc, Consilii Maiestatis Regia in parte Boreali Praesidi dignis.[see p. /75/].
light sweat, with the head and neck covered, wrapped in hot smooth sheets. The body should be wiped dry of sweat with dry clean cloths, not too soft but slightly rough. Her usual drink was the second decoction. On the days on which she does not sweat, take properly prepared scurvy-grass juice, 6 spoonfuls in the above drink, and salt of scurvy-grass in broth.

By these remedies, praise almighty God most high, she was properly cured beyond the expectation of the Earl and her friends at Ludlow.

[Case 2] Concerning the most illustrious hero and Lord, William [first] Earl of Northampton, most worthy President of His Majesty’s Royal Council of Wales, suffering from burning urine.

4 April 1622.

℞: newly extracted cassia flowers 1oz, washed turpentine 1dr, rhubarb 1sc, liquorice ½sc. Mix with sugar. Make a bolus.

℞: mallows 1 handful, liquorice 1oz. Boil in 2 pints cow’s milk. To the strained liquid /5/ add Fernel’s marsh mallow syrup 6oz. Take 4 or 5oz every morning and at bedtime swallow Cyprus turpentine, in the form of a pill cooked in an apple under ashes.

Thus he was quickly and rightly cured. At Ludlow.

[Case 3] *Mistress* Smith opidana, pia et honesta,
aetatis 54: rheumate calido in oculis destillante,
misere divexata ut mane oculos aperire non
potuit.

℞: pilularum de succino Cratonis dr.s. Fiant pilulae N.iii. Capiat
hora cubitus, et sic per 4 noctes: omni die 4 vel vi sedes sine dolore.

**Topicum:**
℞: suci sempervivi coch.i, vini albi coch.ii. Gutta una vel altera in
oculos instilletur, deinde pannus lineus in eo madefactus per totam
noctem collocandus super oculos. Magnum sentiebat levamen
calore mitigato.

Instillare iubebam aquam sequentem in oculis:
℞: sarcocollae nutritae dr.iii, tutiae praeparatae dr.ii, aloes dr.i,
sacchari candi dr.1.s, camphorae gr.4, [...] croci gr.iii, aquae rosarum
unc.iiii. Misce, macerentur diu, saepe agitando. Una vel altera
gutta in oculos ter in die destillata.

Curata.

[Case 4] /6/ Magister Wilsune theologus

opidanus, fluxu oculi seu de lachrymatione
misere divexatus; aetatis 40.

℞: pilularum de succino dr.i, aurearum dr.s, trochischati agarici
sc.i. Cum syrupo de betonica, fiant pilulae 10. Capiat 5 hora
somni: die sequenti vi sedes. Reiterentur iterum hora cubitus.

---

9Platter, *Praxeos ... de doloribus*, p. 310: ῾R: sarcocollae nutritae dr.iii, tutiae
praepar. dr.ii, aloes dr.i, sacchari candi dr.1.s, camphorae gr.iii, opii gr.iii,
croci gr.iii, aq. ros. unc.iiii. Misce, macerentur diu, saepe agitando: utere.
[Case 3] Mrs Smith of Stratford upon Avon:
pious and respected. age: 54. She was
wretchedly tormented by a hot rheum trickling
from her eyes, so that she could not open them
in the morning.
℞: Crato’s amber pills ½dr. Make 3 pills. Take them at bedtime.
Continue for four nights: four to six stools each day, without pain.
For external use:
℞: houseleek juice 1 spoonful, white wine 2 spoonfuls. Instill one or
two drops in the eyes, then place a cloth soaked in it over the eyes,
all night. She felt great relief when the heat was alleviated.
I instructed her to instil the following water into the eyes:
℞: preserved sarcocol 3dr, prepared tutty 2dr, aloes 1dr. sugar
candy 1½dr, camphor 4gr, saffron 3gr, rose water 4oz. Mix Soak a
long while, stirring frequently. One or two drops were dripped into
her eyes three times daily.
Cured.

[Case 4] Mr Wilson, Vicar of Stratford upon Avon:
wretchedly troubled by a flux from
the eye, as if weeping. Age: 40.
℞: pills - amber 1dr, aureae ½dr, trochischated agaric 1sc. Make 10
pills with betony syrup. Take 5 at bedtime: the next day, six stools.

---

1 Case 3] S.O.: Observ. III [First Century], pp. 4-5. 9 spoonfuls] S.O. adds:
mix them together. 10 cloth] S.O.: a double linnen rag. 14 Soak a long
while] S.O.: letting them stand a day. 15 One...daily] S.O. omits. 19 Case 4]
S.O.: Observ. IV [First Century], p. 5. 21 Age 40] S.O. adds: was cured by the
following medicines.
Topicum:

℞: boli Armeni unc.s, gypsi dr.iii, sanguinis draconis, acaciae ana
dr.ii, corticis granatorum, gallarum ana dr.i. Fiat pulvis. Excipiatur
albumine ovi et pauco aceto rubro. Fiat emplastrum pro temporibus
et fronte.¹⁰

℞: boli Armeni, gypsi ana, cum aceto et albumine ovi, fiat
emplastrum. Post aures applicare vellem.

Super oculum:

℞: albuminem ovi agitatum, adde tantundem aquae rosarum et lactis
mulieris parum.¹¹ Applicetur oculo. Ter in die gutta una vel altera
instilletur aquae ophthalmiaeae nostrae, ut pro Generosa Smith,
folio /5/. Paulo post, per spaciunm forte minutorum horae unius
decem amaritudinem in palato sentiebat egregiam [...] Tandem
cognovi exploratumque habui sarcocollae saporem ipsissimum esse
qui per oculum omnesque occurrentes partes in palatum usque
venisset.¹²

Et his remediis curatus. Benedictus Dominus.

[Case 5] /7/ Mistress Bettes de Ludlowe, tussi

gravi et asthmate cum dolore lateris gravata,
aetatis 50.

℞: conservae rosarum rubrarum unc.ii, passularum solis demptis
gigartis unc.i, sacchari candi unc.i, oleorum vitrioli et sulphuris ana
quantum satis ut acidum. Fiat electuarium. Dosis mane et vesperi
quantum nucis moschati.

¹⁰Platter, Praxeos ... De Doloribus, p. 300. | ¹¹Platter, Praxeos ... De Doloribus, p. 305:
℞: album. ovi unius mediocris, agitatum: adde tantundem aquae ros. et lactis
mulieris parum. | ¹²Dunus, De Curandi Ratione per Venae Sectionem, p. 44.

6 anal] no quantities specified.
Repeat again at bedtime.

For external use:

℞: bole Armeniac ½ oz, gypsum 3 dr, dragon’s blood, acacia each 2 dr, pomegranate rind, galls each 1 dr. Make a plaster for the temples and forehead using egg white and a little red vinegar as excipients.

℞: bole Armeniac, gypsum each. Make a plaster with vinegar and egg white. I wished it applied behind the ears.

Over the eye:

℞: beaten egg white, add the same amount of rose water and a little woman’s milk. Apply to the eye. Instil 1 or 2 drops of our ophthalmic water as for Mrs Smith, page /5/, three times daily. It happened that after a space of ten minutes of an hour he tasted a strong bitterness on his palate. Then I enquired and investigated. I consider the taste to be the very same sarcocol which came from the eye, through all the intervening parts, all the way to the palate.

He was cured by these remedies. Blessed be the Lord.

[Case 5] /7/ Mrs Bettes of Ludlow: weighed down by severe cough and difficulty of breathing, with pain in the side. Age: 50.

℞: Conserve of red roses 2 oz, raisins without seeds 1 oz, sugar candy 1 oz, oils of vitriol and sulphur enough of each for tartness. Make an electuary. Dose: morning and evening, as much as a nutmeg.

---

℞: thuris, masticis ana dr.ii.s, sulphuris dr.ii.s, ligni iuniperi sc.ii,
styracis sc.i, terebinthinae quantum satis. Fiat massa pro
suffumigio. Tempore usus pilula una vel altera vivis carbonibus
inmittatur, fumusque per fistulam convenientem ore excipiatur, et
tegmen capitis eo suffiat: placide superfluam cerebri exiccat
humiditatem.\textsuperscript{13}

In dolorem stomachi:
℞: labdani partem i, cerae partes ii, specierum aromaticum rosatum
Gabrielis quantum satis, et parum carannae. Fiat emplastrum.

Pro lateris dolore:
℞: unguenti dialtheae unc.ii, olei amygdalarum dulcium dr.ii.
Illinantur calide latus affectum et postea in loco inuncto imponatur
linteolum calidum butyro perlitum.\textsuperscript{14}

His longe melius se habuit, postea sequentibus per longum
tempus usa:
℞: aquae stillititiae ex tussilagine, hedera terrestri, verbasco,
veronica, enula, iacea, /8/ id est herba trinitatis, millemorbia, id
est scrophularia maiora, scabiosa, hyssopo, floribus cordialibus,
marrubbo, adiantho utriusque iride Florentina, radice angelicae,
saponaria. ℞ huius aquae lib.12, interiores guaiaci unc.12,
sarsaparillae lib.s, radicis ireos unc.ii, chynae in talleolas sectae
unc.iii, radicis enulae dr.iii, adianthi, veronicae ana M.i,
glycyrrhizae unc.ii, anisi unc.i, passularum enucleatarum unc.vi.
Coquantur in duplici vase, colentur, clarificetur decoctum. Dosis
bis vel ter in die, haustum bonum in patera. Singulis noctibus ad

dialtheae uncias duas, ol. amygdalar, dulcium drachmas tres. Misce. Illinantur
calide latata affecta, et post locis inunctis imponatur linteolum calidum butyro
perlitum.
℞: frankincense, mastic, each 1½dr, sulphur 2½dr, juniper wood 2scs, styrax 1sc, sufficient turpentine. Make a lump for fumigation.

At the time of use, put one or two pieces on glowing coals, and lead the smoke to the mouth by a suitable tube. The skin of the head should be fumigated. This gently dries up the superfluous humour of the brain.

For stomach pain:
℞: labdanum 1 part, wax 2 parts, sufficient Gabrieli’s aromatic rose powder and a little caranna. Make a plaster.

For pain in the side:
℞: marsh mallow ointment 2oz, sweet almond oil 2dr. Spread it warm on the affected side, and afterwards put a hot cloth smeared with butter on the anointed part.

She became much better, then afterwards used the following for a long time:
℞: distilled waters of coltsfoot, ground-ivy, mullein, speedwell, elecampane, knapweed /8/ (i.e., herb trinity), figwort (i.e., scrophularia major), scabious, hyssop, the cordial flowers, horehound, maiden-hair ferns, either orris root, roots of angelica or soapwort. ¶: 12 pints of this water, inner guaiacum 12oz, sarsaparilla ½lb, orris root 2oz, china cut in small pieces 3oz, elecampane root 3dr, maiden-hair, speedwell each 1 handful, liquorice 2oz, anise 1oz, stoned raisins 6oz. Boil in a double vessel, strain. Clarify the decoction. Dose: a good draught in a bowl, two or three times daily. Each night: conserve of red roses to the
iuglandis magnitudinem, conservam rosarum rubrarum cum bolo electuarii ad sc.ii ad unc.i conservae.

Idque saepius in die hauriat zulapium ex destillatione sequenti:

℞: limacum praeparatorum lib.i, taleolarum ex pane albissimo lib.s, luteorum ovorum N.30, cremoris lactis lib.4, cinamomi unc.ii, sacchari electi lib.ii, vini muscadelli lib.ii. Fiat omnium destillatio in duplici vase et saepius haustum huius aquae assumat, cum manu Christi perlata et aliquando lohoc sequenti:

℞: lohoc sani et experti unc.ii, penidiaram unc.ii, syrupi capillorum veneris, hyssopi, liquiritiae, tussilaginis ana unc.i, radicis angelicae, radicis enulae conditae ana unc.s, radicis ireos dr.i. Adde ad unc.4 huius linctus florum sulphuris dr.ii.

His spacio 5 septimanarum curata. Postea, nescio quo morbo, obiit.

℞: vini scillitici unc.s, oxymellis scillitici dr.i, poculi chymici nostri unc.s: vomitos 7.15

℞: rhabbari pulverisati dr.i, electuarii diaphaeniconis dr.iii, pulveris senae laxativae dr.s, syrupi de succo rosarum unc.i, aquae chelidonii unc.iii. Misce: 8 sedes.

15Ruland the Elder, 'Centuria V.', Curationum: poculum nostrum chymicum is described on pp. 281 and 303-304.
amount of a walnut with a bolus of the electuary, from 1sc. to 1oz of the conserve.

She should often drink a julep of the following distillation during the day:

℞: prepared snails 1lb, good white breadcrumbs ½lb, 30 egg whites, cream of milk 4 pints, cinnamon 2oz, choice sugar 2lb, muscadel wine 2 pints. Make a distillation of everything in a double vessel.

She should take a draught of this water often with pearled manus Christi, and finally the following lohoc:

℞: lohoc sanum et expertum 2oz, barley sugar 2oz, syrups of maiden-hair fern, hyssop, liquorice, coltsfoot each 1oz, angelica and preserved elecampane roots each ½oz, orris root 1dr. Add flowers of sulphur 2dr, to 4oz of this linctus.

She was cured by these within 5 weeks. Later she died. I do not know what the illness was.

[Case 6]³ /9/ Cure of yellow jaundice with tertian fever: for Mr Nash's serving-maid, who was staying at the Sign of the Bear. Age: 28.

℞: Wine of squills ½oz, oxymel of squills 1oz, our chymical cup ½oz. Seven vomits.

℞: powdered rhubarb 1oz, diaphoenicon electuary 3oz, laxative senna powder ½dr, syrup of rose juice 1oz, celandine water 3oz. Mix. Eight stools.

³See Appendix B: New Patient Identifications.
Corpore rite purgato per 4 matutinas, stomacho ieiuno capiebat dr.i sequentis pulveris in ovo sorbili:

℞: corticis interioris crespini, terrae meritae, rasurae eboris et cornu cervi ana p.i, croci p.s. Fiat pulvis.

Optime curata etiamsi icteritia per totum corpus sparsa.

5

[Case 7] Pouell Generosus de Ludlowe,

ophthalmia laborante cum continuo rheumatis fluxu concomitante ut faciem excoriebat, neque lucem nec lucernam videre potuit. *Vir hic fuit annum circiter 50*.\(^{16}\)

℞: pilulae de succino dr.s. Fiant pilulae iii: die sequenti 5 sedes, et sic per 4 dies.

℞: masticis, thuris, myrrhae ana dr.i.s, sanguinis draconis dr.i, boli Armeni, farinae fabaceae ana unc.s, croci sc.i. Cum albumine ovi, oleo rosato et aceti paxillum, fiat frontale. *Lana telave excipiatur aut parno molliori iisdem imbuta, fronti accomodentur*.\(^{17}\)

15

/10/ ℞: tutiae praeparatae tenuissime pulverizatae ita ut per sindonem facile traiici possit dr.i.s, camphorae, croci ana gr.12. *Haec simul in syndone conclusa munda in aqua rosarum vinique albi unc.iii madescant. Fiat collyrium: guttae duae vel tres in oculos*

\(^{16}\)Ruland the Elder, 'Centuria III', *Curationum [...] centuriae*, p. 169: *vir hic fuit annum circiter 60*. \(^{17}\)Bruele, *Praxis medicinae*, p. 127: ℞ *masticis, thuris, myrrhae ana dr.i.s., boli Armenae, farinae fabaceae ana unc.s, croci scr.i, cum albumine ovi, oleo rosata et aceti paxillo, fiat frontale, lana telave linea excipiatur aut parno molliori iisdem imbuto, fronti accommodentur.*
After her body was properly purged on four mornings, she took 1oz of the following powder on an empty stomach, with a soft-boiled egg:

℞: inner bark of barberry, turmeric, shavings of ivory and hartshorn each 1 pinch, saffron ½ pinch. Make a powder.

She was very well cured, even though her whole body was spotted with jaundice.

[Case 7] Mr Powell, a gentleman of Ludlow: suffering from a disease of the eyes with an incessant flow of rheum that excoriated his face. He could see neither light nor lamp. He was about 50 years old.

℞: amber pills ½dr. Make 3 pills: five stools the next day, and continue the course for four days.

℞: mastic, frankincense, myrrh each 1½dr, dragon’s blood 1dr, bole-Armeniac, bean flour each 1dr, saffron 1sc. Make a paste for the forehead with egg white, rose oil and a little vinegar. Take them up with wool or woven cloth, or soak them in a softer cloth. Apply to the forehead.

℞: prepared tutty, very finely powdered so that it can easily pass through muslin, 1½dr, camphor, saffron each 12gr. Soak them together enclosed in clean muslin, in rose water and white wine, 3oz.

instillentur. Iaceat in lecto, aeger supinus, et iniecta intra apertos oculos aquae lachrymae, una vel altera, cum pluma gallinae nigrae indatur; claudat reseretque oculos infirmus ut per oculorum cavitates intrusa aqua per oculum diffundatur, id bis terve in die, et curabitur. Cum hac aqua usus decoctione ex sarsaparilla et guaiacu ut supra pro Comitissa, ut folio /3/, herbis omissis.

Rite curatus spacio 20 dierum praeter amicorum et liberorum expectationem.

[Case 8] Mistress Chandeler opidana, aetatis 34, post longam aegritudinem et effraenatum rubeorum fluxum in cachexiam incidebat.

℞: decoctionem senae ut pro Comitissa, foliis /1/ et /2/, per 5 dies. Venae sectione incantamenti similiter ab effraenato rubeorum fluxu curata.

Postea tres annos in puerpera rubeorum fluxu debilitata, ut mortem praef prae foribus expectat. Phlebotomia curata.

18 Bruele, Praxis medicinae, p. 127: R tutiae praeparatae tenuissimeque pulverizatae, ita ut per sindonem facile traici possit dr.i.s camphorae gr.xii haec simul in sindone conclusa munda, in aquae rosarum vinique albi unc.iii madescant, fiat collyrium: guttae duae vel tres in oculum instillentur.
19 Croll, Basilica chymica, p. 197: Iaceat in lecto aeger supinus, et iniecta intra apertos oculos aquae lachrymae, vel gutta cum pluma gallinae nigre indatur, claudat reseretque oculos infirmus, ut per oculorum cavitates intrusa aqua per oculum diffundatur, id bis terve in die, et curabitur.
Make a collyrium, instill two or three drops in the eyes. The patient should lie on his back in bed, and 1 or 2 eye drops should be placed in the eyes, introduced with a feather of a black hen. The patient should close and open their eyes so that the instilled water is diffused throughout the eye cavities, two or three times daily. He was cured. With this water he used the decoction of sarsaparilla and guaiacum as above for the Countess on page /3/, omitting the herbs.

He was rightly cured within twenty days, beyond the expectation of his friends and servants.

[Case 8] Mrs Chandler of Stratford upon Avon, age 34: wasting away after a long illness and unbridled flux of the reds.

℞: senna decoction as for the Countess, pages /1/ and /2/, for five days. She was cured of the unbridled red flux by venesection, as if by magic.

Three years later she was weakened by the red flux after child birth, so that she expects death at the door. She was cured by venesection.

---

[Case 9]  Christiana Basse de Southam, aetatis 29, flatu stomachi et pituita misere lancinata, quae potu aquae vitae pro tempore ablata, mox reddiit, cum summo stomachi dolore ut paene suffocata, et deinde colica divexata.

℞: poculi chymici dr.v, vini scillitici unc.s, *tam ore quam alvo* rite purgata.¹⁰

Die sequenti:

℞: pulveris laureolae praeparatae cum aceto pondere vi denariorum, cum syrupo violarum et satis quantum possetalae: sedes vii.

Corpore optime purgato:

℞: *theriaca Londinensis*,²¹ Mithridatii ana dr.i, conservae absinthii unc.iii, pro tribus matutinis. Potus decoctum melissae, mentheae in aqua chalybeata.

His rite curata et mihi ingentes reddebat gratias, et dixit se nunquam postea torminibus cruciari. Laus Deo.

℞: c*ammomillae M.i, vini malvatici lib.i.s.*  *Macerentur per horam*

---

²⁰A phrase commonly found in Ruland the Elder, *Curationum [...] centuriae*, but rarely elsewhere, e.g.: 'Centuria I', pp. 21, 37, 43; 'Centuria II', pp. 89, 90, 141; 'Centuria III', p. 181; 'Centuria IV', p. 241, 'Centuria V', p. 346; 'Centuria X', pp. 716, 717 [See also pp. /18/, /21/, /139/.] | ²¹Pharmacopoeia Londinensis, p. 90.
[Case 9] /11/ Christiana Basse of Southam: age 29, wretchedly attacked by wind and phlegm in the stomach. She was relieved for a time by a drink of distilled spirits. Her complaint soon returned with very severe stomach ache, so that she was almost suffocated, then tormented by colic.

℞: the chymical cup 5dr, wine of squills ½oz. She was rightly purged, upwards and downwards.

Next day:

℞: prepared laurel powder with vinegar, the weight of sixpence, with syrup of violets and sufficient posset ale. Seven stools.

When the body was very well purged:

℞: London treacle, Mithridate each 1dr, wormwood conserve 3oz, for three mornings. Her drink was a decoction of lemon balm and mint in steeled water.

She was rightly cured by these, and returned me great thanks and declared herself never afterwards tortured by these torments.

Praise God.

[Case 10] Mrs Wincoll, a gentlewoman, companion to the [first] Countess of Northampton, about 48 years old: tortured by anal prolapse and tenesmus.

℞: camomile 1 handful, malmsey wine 1½ pints. Soak for one to two
unam et alteram super carbones, lento igne, foræatur anus linteis in eo madefactis, tam calide ut ferre poterit, et reponatur postea cum digito /12/ in locum proprium: tum spongeam madefacito in eodem vino calefacto et expresso liquore, super spongeam callidam sedeat aeger atque ipsam sedendo comprimat.  

Nota: flores camomillae longe meliores et praestantiores, sed ipsa a tenasco et procidentia ani hoc modo liberata.  

Eodem modo curatus paedagogus Generosi Broades.

℞: pilularum de succino dr.i hora cubitus, et sic ter corpus purgatum. Usa est aqua mercuriale Penoti ex emulsionibus papaveris albi, boracis et sacchari candi.  

Huitus usus facies nitida.

℞: syruporum hyssopi, tussilaginis ana unc.i, oxymellis scillitici dr.iii, aceti scillitici dr.i. Fiat linctus de quo saepi lambebat.  

Postea sic purgata:  
℞: cassiae noviter extractae cum aqua endiviae unc.i, rhabarbari

---

22Penot, De denario medico. p. 64: ℞ florum camomillae M.i, vini malvatici lib.i.s macerentur per horam unam, et alteram, super carbones, lento igne, foræatur anus linteis in ea madefactis, tam calide ut ferre poterit, et reponatur postea cum digito in locum suum: tum spongiam madefacito in eodem vino calefacto, et expresso liquore, super spongiam callidam sedeat aeger, atque ipsam sedendo comprimat. As recommended by Penot, see fn. above.  

24Penot, De denario medico. p. 61: a lengthy recipe ad faciei tuberculæ contains the ingredients mentioned.
hours over glowing coals on a slow fire. Keep the anus warm with cloths soaked in this, as hot as can be borne, then replace it in the proper place with a finger. /12/ and then with a sponge soaked in the same warm wine and the fluid squeezed out. The patient should sit on the warm sponge and squeeze it tightly when sitting.

NOTE: these did free her from the tenesmus and prolapse, but camomile flowers are much better and of higher quality. Mr Broade's tutor was cured in the same way.

[Case 11] Mrs Hanbury, a gentlewoman: to preserve the face from pimples. She was disfigured as if by leprosy with itchy excoriation.

℞: amber pills 1dr at bedtime, and her body was purged thus three times. She took Penot's mercury water made with emulsions of white poppies, borax and candy sugar.

Using this cleared her face.

[Case 12] Ann Gibbs, a gentlewoman aged 19:

cure of a ruptured stomach abscess.

℞: hyssop and coltsfoot syrups each 1oz, oxymel of squills 3dr, vinegar of squills 1dr. Make a linctus, which she licked often.

Then she was purged thus:

℞: newly extracted cassia with endive water 1oz, powdered rhubarb

---

pulverizati dr.i, aquae scabiosae unc.4, syrupi cichorii cum
rhabarbaro unc.i. Fiat haustus: sedes viii.
℞: absinthii, rosarum, buglossi quantum satis. Cum oleo rosato et
masticino et viola, fiat emplastrum pro stomacho. Calide
appliicitur.

/13/ Postremo:
℞: radicum iridis nostri, lilii ana unc.i. Bulliant in lib.i vini albi ad
dimidium. Bibat unc.4 mane.

Optime curata et bene colorata.

[Case 13] John Emes, aetatis 15, per lectum
mingente.

Capiat gutturem galli torrefactum cum croco Martis in ovo sorbili.

Liberatus.

[Case 14] Francisca Reyland de Quenton,
tempore fluendorum menstrui frigore accepto, in
tumorem manum et pedum incidebat, ita ut se
moveri non potuit.
℞: electuarii cariocostini dr.iii, tartari crystalli sc.i. Fiat cum
saccharo bolus, ex quo sex sedes magnas et foetidas. Deinde venae
sectio liberata.

Relapsa post 20 dies, iterum purgata laureola praeparata, et
postea usa potione sequenti:
℞: ligni sancti lib.s, herbarum agrimoniae, becabungae, nasturtii
aquatici, salviae, betonicae, rosmarini ana M.i. Bulliant in lib.8

13 Martis| ♂. 20 tartari| ♂.
1dr, scabious water 4oz, chicory syrup with rhubarb 1oz. Make a draught: 8 stools.
℞: sufficient wormwood, roses, bugloss. Make a plaster for the stomach with oils of roses, mastic, violets. Apply hot.

Finally:
℞: roots of our iris, lilies, each 10z. Boil in 1 pint white wine, reduce to half. Drink 4oz in the morning.

She was very well cured, with a good colour.

Take the gullet of a rooster roasted, with crocus Martis in a soft-boiled egg.

Freed.

[Case 14] Francisca Reyland of Quinton:
caught a cold while menstruating and fell into a swelling of the hands and feet, so that she could not move.
℞: caryocostinum electuary 3dr, tartar crystals 1sc. Make a bolus with sugar, from which six large foul-smelling stools. Then venesection freed her.

She relapsed after twenty days and was again purged with prepared laurel, and afterwards used the following potion:
℞: guaiacum ½lb, green shoots of agrimony, brooklime, watercress,

---

aquae fontanae ad lib.4. Sub finem ebullitionis adde cinamomi
dr.ii. seminum anisi dr.ii.  *In aurora pondere unc.8 praelibat, quo sudor evocabitur.*

Hora cubitus balneum ingreditur:

℞: foliorum querci M.20, chamaemelli, salviae, rutae ana M.ii, salis
lib.ii, aluminis lib.i, sulphuris vivi unc.4. Bulliant in satis quantum
aqua pro balneo.

Post balneo inungantur membra hoc unguento:
℞: unguenti Martiati unc.i, oleorum lumbricorum, terebinthinae

unc.s. Misce.

Perfecte curata.

[Case 15] /14/ Generosa Hunt, aetatis 46 de
Stockgreene: scabie et pruritu laborante.

℞: *fumiterra*, *boraginis*, *buglossi*, *scabiosae*, *absinthii* ana quantum
vis. *Succus extrahabatur ad lib.ii quantitatem, cum sero decoquatur
usque ad consumptionem seri [...] et semper despumetur, et tunc in
fine praemittatur residere, et quolibet die *potetur bonus haustus
actualiter frigidus cum saccharo.*

Est syrupus scabiosus Iohannis Anglici et est de secretis qui
per se multos scabiosos curavit, et sic ego multos a faeda scabie
liberavi.

---

25 Amatus Lusitanus, *Curationum medicinalium centuriae quatuor*, p. 67: in
aurora pondere octo unciarum praelibat, quo sudor maxime evocabatur.
26 John of Gaddesden, *Praxis medica*, p. 1122: Aliud ex meis secretis, hoc est:
℞: fumi terrae, boraginis, buglossae, scabiosae, absinthii ana, succi
extrahantur, ad quantitatem lib.2, cum sero caprino vel alio liquore, fiat
decoctio ad consumptionem seri, quae subinde fiat et despumetur residentia
materiae; de qua quolibet die M.Maio, dum durant succi praedictarum
herbarum, potetur bonus haustus actualiter frigidus.
sage, betony, rosemary each 1 handful. Boil in 8 pints spring water, reduce to 4 pints. Immediately after boiling, add cinnamon 2dr, aniseed 2dr. At dawn sip 8oz by weight, which will provoke sweating.

At bedtime she took a bath:
℞: oak leaves 20 handfuls, camomile, sage, rue each 2 handfuls, salt 2lbs, alum 1lb, rock sulphur 4oz. Boil in sufficient water for a bath.

After the bath the limbs were anointed with this ointment:
℞: Martiatum ointment 1oz, oil of worms and turpentine 1oz. Mix.

She was completely cured.

[Case 15] /14/ Mrs Hunt, a gentlewoman aged 46 of Stock Green: suffering from scabs and itch.
℞: fumitory, borage, bugloss, scabious, wormwood, each as much as you wish. Extract juice to make 2lbs, heat with whey until the whey is consumed, skim constantly. At the end let the residue settle. During the day drink it as you please, a good draught really cold with sugar.

This is John of Gaddesden’s scabious syrup, and it is one of the secrets\(^5\) with which he cured many of scabs. I have freed many from disfiguring scabs in the same way.

\(^5\)Secrets: in this context, ‘more about technical know-how, or “how to”, than hidden knowledge’; Leong and Rankin (eds), *Secrets and Knowledge*. p. 8.

[Case 16] Magister Dison, mane stomacho ieiuno
cardialgia et deliquio animae et aegritudine
stomachi gravatus.

℞: pilularum Ruffi, de succino, stomachicae, hierae simplicis ana
sc.i. Fiant pilulae 7 vel 9. Rite purgatus.

Postea:
℞: Mithridatii optimi unc.s, conservae rosarum unc.i, conservae
absinthii unc.iii, theriaca Londinensis dr.vi.27 Misce. Detur dr.i.s
mane.

Penitus liberatus.

Mordicatio illa (secundum Iohannem Baptistam Montanum,
Centuria i, consilio 72, folio 389) apparat circa finem concoctionis
eamque percipit talem, ut deficere videatur, nisi cibum assumat. Hoc
est ratione humoris acidi mordicantis, quae mordicatio facit, ut
incidebat /15/ in talem defectum ex quo cibi sumpto quiescit.28

Causa cur debilitatem ante cibum sentit, est quia cum fiant
digestiones, membra redduntur avara, ideo venae trahunt ab hepate,
hepar a venis mesairicis, mesaraicae a ventriculo. Facta ultima
concoctione cum percipit ventriculus mordicationem, debilitatur quia
indiget moto nutrimento tum propter humorem mordicantem, sumpto
cibo obtunditur acrimonia humoris et hepar invenit quod attrahit, et

et hoc est ratione humoris acidi mordicantis, quae mordicatio facit, ut incidat
in talem defectum: ex quo cibo sumpto quiescit.

16 cum] non [this reverses the sense which from the context was not Hall’s
intention].
[Case 16] Mr Dyson: weighed down by heartburn on an empty stomach in the morning, with faintness and illness of the stomach.

℞: pills - Ruffus's, amber, stomachic, hierae simplex each 1sc.

Make 7 to 9 pills. He was rightly purged.

Afterwards:

He was completely freed.

This griping (according to Giovanni Battista de Monte, Centuria Prima, consultation 72, page 389) appears around the end of digestion and it feels like this, that he appears to weaken unless he takes food. This is by reason of the acid biting humour which causes griping so that he falls /15/ into such a weakness, from which he is calmed by the taking of food. The reason he feels the weakness before food, is because when digestion takes place, the organs become greedy. Then the veins draw on the liver, the liver on the meseraic veins, the meseraics on the stomach. When digestion is entirely completed, the stomach feels the griping. It becomes weak, because it requires much nourishment, moreover this is because of the griping humour. The acridity of the humour is blunted by the

et calamus aromaticus, pulverisata omnia, et in petia linea ligata, ita ut
diutius conservetur, et sapor suavior fiat.
breadcrumbs with steeled water and sugar.

Within a few days of using these remedies, she was made entirely whole. I have cured many with wax prepared in this way.

[Case 18] Mrs Lane, a gentlewoman of Alveston: weighed down by heaviness of the chest and difficulty of breathing. Age: 49.

℞: trochischated agaric 2sc. Make a bolus with rose sugar and preserved ginger conserve. Four stools, then one vomit, afterwards three stools.

The following day and for several days, she is to take the following oxymel:

℞: raisins ½oz, green shoots of hyssop, oregano, horehound, pennyroyal, germander speedwell, scabious, coltsfoot, blessed thistle, nettles each ½ handful, sliced orris root, sweet flag each 1oz, agaric 2dr, senna 2oz, ginger 2dr. Make a decoction of these in 2 pints good vinegar. Mix in a third part of water. Boil until reduced by a third. To the strained liquid add refined honey 12oz, then boil again to the thickness of an oxymel. Whenever she is threatened with difficulty in breathing, she should drink one spoonful often, sipping it a little at a time. One may add cinnamon, cloves and sweet flag.

Everything is powdered and tied in a fine cloth, so that it keeps longer and has a more agreeable flavour.

---

[Case 18] S.O.: Observ. XVIII [First Century], p. 15. Difficulty of breathing S.O. adds: was cured as followeth. Ginger conserve S.O. adds: this was taken for three days. Then one vomit S.O.: the second day six [probably reading v.i (for vomitus i) as the number vi]. For several days S.O.: as often as difficulty of breathing required, swallowing it by degrees. Germander speedwell S.O.: speedwell, germander [as if separate plants; it is a single plant in Hall’s source].
Optime se habuit, et dixit oxymel auro dignum.

[Case 19] /17/ Generosa Hall, uxor mea, colica
misere cruciata.

℞: diaphaeniconis, diacatholiconis ana unc.i, pulveris Holland dr.ii, olei rutae unc.i, lactis quantum satis. Fiat glister, ii sedes.
Manante ad hac dolore et parum mitigato, cui statim inieci vellem pro glistere, vini Hispanici lib.i calide. Statim magnos edidit flatus, et ab omni dolore liberata. Stomacho applicabam emplastrum de labdano Cratonis, cum caranna et specie aromatico rosato et oleo macis.

Unico hoc clystere liberavi Comitem Northamptoniensis a saevissimo collicae dolore.

℞: spiritus vini vel aquae vitae, quae fuit ad manum, unc.vi, camphorae dr.i. Ebulliant parum donec camphora dissolvatur. Adde dum adhuc fervet santali oderati pulverizati dr.i.s. Madefiant hoc liquore panni et calidi applicantur.35

Liberata.

She returned to full health and said the oxymel was worth gold.

[Case 19] /17/ Mrs Hall, a gentlewoman, my wife: wretchedly tortured by colic.

℞: diaphoenicon, diacatholicon each 1oz, Holland powder 2dr, oil of rue 1oz, sufficient milk. Make an enema: two stools. The pain remained and was little relieved, so I wished at once to inject 1 pint of hot Spanish wine as an enema. She immediately produced a large amount of wind, and was freed from all pain. I applied Crato’s labdanum plaster with caranna, aromatic rose powder and mace oil.

With this enema alone I freed the Earl of Northampton from a most severe colicky pain.

[Case 20] Mrs Herbert: wretchedly tortured by pain in the side.

℞: wine spirit or aqua vitae, whichever is to hand, 6oz, camphor 1dr.

Boil a little until the camphor dissolves, then add powdered sandalwood while it is still hot. Soak cloths in this liquid and apply hot.

Freed.

---

[Case 21] Maria Wilsune, hectica febre cum tussi gravi, obstructione menstruum, circa aetatis annum 22, debilitata.

Sunt cibi elixi, nam magis humectant [...] caro vitulina [...] gallinacea item pulli gallinacei, si nutritur hordeo, vel saeginentur pasta intrusa forma pilularum. Paratur ex carne ranarum, limacum et cancrorum fluviatilium cum farina hordei subacta. Sic soleo pinguescere. /18/ Ova probantur, vitella imprimis maxime cum vino et saccharo cocti, uti nostrum restoratium (id est, a caudell).

Panatella:

℞: medullae panis lotae in lacte et postea cum lacte amygdalarum, aqua rosarum et saccharo permixta.

Ptisana seu cremor hordei sic praeparata:

Glistern:

℞: iuris pullae parvae, bene contusae unc.x, in quo bulliant seminum papaveris, flororum nenupharium, violarum, lactucae, malvae ana M.s. Deinde co lentur, et colaturae adde olei violacei unc.i.s, sacchari albi unc.ii, mellis violati unc.i.s, salis communis

[Case 21] Mary Wilson: weakened by a hectic fever with severe cough, obstructed menstruation. Age: about 22 years.

Foods should be boiled, because they moisten more: veal, fowls, also young chickens if they are fed on barley or fattened on pellets formed out of a paste. This is prepared from the flesh of frogs, snails and river crabs bound together with barley flour. That is how I am accustomed to encourage weight gain. /18/ Eggs are recommended, the yolk most of all, boiled with wine and sugar, as our restaurative (that is, a caudle).

For a pap:
℞: bread crumbs soaked in milk and then almond milk, mixed with rose water and sugar.

A ptisane or barley cream prepared in this way:
℞: barley 2oz, purslane, borage each ½ handful. Boil in 10 pints spring water until 4 are gone. Drink a sufficient quantity of the strained liquid. I wished her to have frequent recourse to sugar of roses tablets.

An enema:
℞: well beaten broth of a small chicken 10oz. Boil in it poppy seeds, flowers of water-lilies, violets, lettuce, mallows each ½ handful, then strain. To the strained liquid add oil of violets 1½oz, white sugar 2oz, violet honey 1½oz, household salt 1½dr, egg yolk 1. Make the

---

1 Case 21] S.O.: Observ. XXI [First Century], p. 17. 5 if...paste] S.O.: fed either with barley, or crammed with past made of barley meal [In Hall's source it is clear that the fowls are fed this, not the patient]. 6 This...flour] S.O.: frogs, snails, and river-crabs were also exhibited [see previous note].
dr.i.s, vitelli ovi N.i. Fiat gilster.

Lac muliebre vellem sugere. Optimum est cum sugitur e mammilla mulieris nutritae ex cibis infrigidantibus et humectantibus ut ex lactucis, hordeo, ex lacte seminum mellonum,\textsuperscript{39} et si sit, a muliere quae a partu menses 4' superaverat, desumatur, optimum est.\textsuperscript{40}

His licet dextre usa, parum profuerunt, nam post annum placide cum Domino dormit.

\textsuperscript{39} Vettori, \textit{Exhortatio ad medicum recte}, p. 374: Convenit enim et praecipue cum sugitur ex mammilla mulieris nutritae ex cibis infrigidantibus, et humectantibus ut ex lactucis, ex hordeo, ex lacte seminum mellonum [A similar recipe is found in other editions of Vettori, but this wording matches Hall best].

\textsuperscript{40} Platter, \textit{De doloribus}, p. 223. \textsuperscript{41} See fn., p. /11/. \textsuperscript{42} Crato, \textit{Consiliorum [...] liber quintus}, p. 338: Fernelius affirmat se sequentium pillularum tantam vim experiendo cognovisse, ut nullam cephalagiam vel hemicraniam offenderit, quam non curarit [I have not found this recipe in Fernel, nor did any seventeenth century author. If a source is mentioned, it is Crato as above].
I wished her to drink woman’s milk. *It is best when it is drunk from the breast of a woman nourished on cooling and moistening foods such as lettuces, barley, milk of melon seeds;* and if possible, *best chosen from a woman who has passed four menstrual cycles after giving birth.*

Though used properly they were of little benefit, because after a year she rested in peace with the Lord.

[Case 22] Mr Drayton, an excellent Poet, is troubled by a tertian fever:

℞: the chymical cup 1oz, syrup of violets ½ spoonful. Mix them. He was properly purged *both upwards and downwards,* and cured.

[Case 23] Goodwife Bettes, aged 40:

℞: the chymical cup 1oz: six vomits.

The next day:

℞: pills - amber 2dr, *Fernel’s for headache* 1dr. Make 15 pills. Take 2

—

2 It...6 birth] S.O.: nourished with cooling and moistning diet, as lettuce.  
7 Though...Lord] S.O.: A year after this she died.  
19 stand] S.O. adds: was cured thus [notable because Hall made no claim for a cure in this case. The case report ends abruptly with the second decoction, suggesting that Hall inadvertently omitted his usual final words.
ad unc.vi. Postremo usa decoctioni sarsaparillae simplicis, maxime a Iohanne Cratone commendatur in dolore capitis.  

℞: salsae unc.iv, aquae lib.x, comminuo salsam in partes minutas [...] seco in frusta parva, postea macero in aqua calida per spacium 24 horarum. [...] Coquo ad medietatis consumptionem. [...] capiat haustum mane et hora cubitus.

Decoctionem secundam facio:

℞: salsam praeparatam et aquae lib.15 et sine infusione bullio ad consumptionem 3ae partis, et hoc decoctum valet pro cena et prandio.  

℞: vini Malvatici unc.vi, olei vitrioli gut.vi, diluantur bene. Ex diluto hoc capiebat quotidie mane ieiuno stomacho unc.i.  

℞: oleorum absinthii, macis ana unc.s, speciei aromatici rosati Gabrielis dr.s. Misce, fiat unguentum pro stomacho.

℞: syrupi papaveris unc.iii, aquarum scabiosae, menthae ana unc.ii, boraginis unc.i, olei vitrioli guttas aliquot.

Curata, laus Deo.

---

3 before dinner. When the pills were finished, she was bled up to 6oz. Finally she took the simple decoction of sarsaparilla, greatly praised by Johannes Crato for headache:

℞: sarsaparilla 4oz, water 10 pints. I break the sarsaparilla into small pieces, cut in small bits, then I soak them hot water for twenty-four hours. I boil it, reduce to half. Take a draught morning and at bedtime.

I make a second decoction:

℞: the prepared sarsaparilla and water 15 pints, and without soaking, I boil them until reduced by a third. This decoction is powerful at dinner and lunch.

[Case 24] Mrs Boughton, a gentlewoman, pregnant:

freed from vomiting and diarrhoea by this alone:

℞: Malmsey wine 6oz, oil of vitriol 6 drops, dilute well. She took 1oz of this dilution on an empty stomach in the morning, daily.

℞: oils of wormwood, mace, each ½oz, Gabrieli’s aromatic rose powder ½dr. Mix. Make an ointment for the stomach.

℞: poppy syrup 3oz, scabious, mint waters each 2oz, borage 1oz, a few drops of oil of vitriol.

Cured, praise God.

---

℞: poculi chymici unc.i: vomitos vi, sedes iii.

Die sequenti mane:

Postea sequens pulvis mane et vesperi sumatur dr.i, et est pulvis Martini Rulandi in rheumati:

℞: pulveris senae simplicis dr.vi, seminum erucae unc.s, piperis longi dr.i.s. Fiat pulvis. ⁴⁶

Ex his perpaucis intra paucos dies, nempe vii, sanus factus est omnino. ⁴⁷

---

⁴⁶Ruland the Elder, Balnearium Restauratum, p. 142. ⁴⁷Ruland the Elder, 'Centuria III', Curationum [...] centuria, p. 221: Et his perpaucis intra dies paucos nempe quinque sanus factus est omnino.

20 mense 5° in margin.
[Case 25] /20/ Mr Randolph, a gentleman:
wretchedly overwhelmed by headache and
catarrh and troubled by constant
expectoration, so that at night he wrapped his
head in a triple skullcap. Age: 35.
℞: the chymical cup 1oz. Six vomits, three stools.
The next morning:
℞: pills cochiae 1dr, aureae ½dr, alhandal trochees 7gr. Make 7
pills with betony syrup. He was rightly purged; cephalic vein bled
to 6oz.
Afterwards he took the following powder morning and evening. This
is Martin Ruland’s powder for rheum:
℞: simple senna powder 6dr, rocket seed ½oz. long pepper 1½dr.
Make a powder.
With these very few, in few days - seven to be exact - he was
made entirely well.

[Case 26] Mrs Boughton, a gentlewoman of
Cawston aged 28: fell into a fever with excessive
uterine flux three days after a miscarriage at five
months, in danger of death. She was vomiting,
thirsty, off her food and overwhelmed by fainting.
She was cured by me, and very quickly healed.

2 Case 25] S.O.: Observ. XXV [First Century], p. 19. 12 This is Martin
Century], p. 20.

Mane et sero usa est decoctione sequenti, nam abstergit, incidit, educit et sitim depellit. Decoctum pectorale:
℞: hordei mundi M.iii, violarum p.ii, glycyrrhizae unc.s, iuiubarum unc.i, sebesten unc.ii, cardui benedicti M.i.s. Fiat decoctio in satis quantum aquae ad lib.12. Colatura ad misceatur sacchari violati unc.iii. Fiat potus. 48

His solis remediis ab omni expectatione (Laus Deo uno trino) sana facta fuit.

[Case 27] Capitanus Basset circa aetatis annum 50, febre 3a corripitur.
℞: poculi chymici dr.v, vini scillitici dr.ii, syrpi violarum coch.i. Misce. Hora ante paroxysmum tam ore quam alvo rite purgatus. 49

Finito vomitu:
℞: electuarium de gemmis frigidis sc.ii, diascordii dr.s, syrpi papaveris rheadis unc.i, aquae scabiosae unc.4. Misce.

---

℞: prepared hartshorn 1oz, spring water 6 pints. Boil until 2 pints are gone, then remove from the fire. Afterwards add \(\frac{21}{3}1\) lemon syrup 2oz, rose water 4oz, sufficient sugar for a pleasing acidity. In place of continuing this, she took a beverage which greatly comforted her.

She took the following decoction morning and evening, for it dispels, assails, leads away, and banishes thirst. A decoction for the chest:

℞: wheat barley 3 handfuls, violets 2 pinches, liquorice \(\frac{1}{2}\) oz, jujubes 1oz, sebestens 2oz, blessed thistle 1\(\frac{1}{2}\) handfuls. Make the decoction in enough water for 12 pints. To the strained liquid add violet sugar 4oz. Make the beverage.

By these remedies alone she was made well past all expectation, praise God the one and three.

[Case 27]⁶ Captain Basset, about 50 years old: seized by a tertian fever.

℞: the chymical cup 5dr, wine of squills 2dr, syrup of violets 1 spoonful. Mix. He was rightly purged both upwards and downwards, an hour before the attack.

When the vomiting had ended:

℞: electuary of cold gems 2sc, diascordium \(\frac{1}{2}\) dr, field poppy syrup 1oz, scabious water 4oz. Mix.

---

⁶See Appendix B: New Patient Identifications.
Die quietis sic purgatus:

℞: diaphaeniconis, diacatholiconis ana dr.ii, rhabarbari pulverizati, 
pulveris senae laxativae Rulandi ana dr.s, pulveris Holland dr.i, 
syrupi cochleariae unc.i, aquae betonicae, cardui benedicti ana 

Tribus ab hinc mensibus, incidebat in hydropem cum pedum 
tumore.

℞: poculi chymici unc.s, vini scillitici /22/ dr.ii, aquae hordei, 
syrupi violarum ana unc.s: vomitus vii, sedes ii.

Die sequenti:

℞: foliorum cichorii, boraginis, buglossi, violarum, fragarum ana 
M.i, seminum anisi, carvi ana dr.i, radicis apii hortensis, lapatii 
acuti ana unc.i, florum boraginis, buglossi, violarum, rosarum, ana 
p.i. Bulliant in satis quantum aquae ad unc.12. Colaturae ℞ 
unc.4. Infunde trochischati agarici, rhabarbari ana dr.s, 
meoachani dr.s, zingiberis sc.i.s, spernardi gr.4, cinamomi sc.s. 
Mane iterum coletur. Colaturae expressae ad unc.iii, adde syrupi 
rosacei solutivi unc.ii.s, mannae colaturae unc.s. Misce, fiat potio, 
et sic pro 4 matutinas.

His finitis sic purgatus:

℞: pilularum aggregativarum sc.i, gummi gambogiae gr.5, olei anisi 
gut.5, syrupi cichorii cum rhabarbaro quantum satis. Fiant pilulae 
ii pro dosi: septem sedes. Secunda die unam pilulam capiebat: 5 
sedes cum felici et exoptato eventu, nam melius respirare et 
ambulare potuit.
He was purged in this way on the quiet days:

℞: diaphoenicon, diacatholicon each 2dr, powdered rhubarb.
Ruland’s laxative senna powder each ½dr, Holland powder 1dr,
scurvy-grass syrup 1oz, betony and blessed thistle waters each 2oz.
5 Mix. He was purged and cured.

Three months later, he fell into a dropsy with swollen feet.
℞: the chymical cup ½oz, wine of squills /22/ 2dr, barley water,
syrup of violets each ½oz. Seven vomits, two stools.

The next day:
10 ℞: leaves of chicory, borage, bugloss, violet, strawberry each 1
handful, anise, caraway seeds each 1dr, roots of garden celery,
bitter dock each 1oz, flowers of borage, bugloss, violet, roses each
1pinch. Boil in enough water for 12oz. Take 4oz of the strained
liquid. Infuse trochischated agaric, rhubarb each ½dr, mechoachan
15 ½dr, ginger 1½sc, spikenard 4gr, cinnamon ½sc. Strain again in
the morning. To 3oz of the pressed strained liquid add loosening
rose syrup 1½oz, strained manna ½oz. Mix. Make a drink. Repeat
on four mornings.

When this was finished, he was purged thus:
20 ℞: aggregative pills 1sc, gamboge gum 5gr, anise oil 5 drops,
sufficient chicory syrup with rhubarb. Make 2 pills per dose: seven
stools. The second day he took 1 pill: five stools, with the desired
happy result because he could breathe and walk better.

---

1 He was purged in this way on the quiet days| S.O.: The next day he was free from
his fit, he took the following. | quiet days| that is, day between attacks of a tertian
fever. 6 swollen feet| S.O. adds: which was removed by the following. 13 enough
water| S.O.: a quart of water. 16 3oz| S.O. omits. 18 four mornings| S.O.: three
mornings.
Potus sudoriferus:

Postea usus birea laxativa sic praeparata:
℞: sarsaparillae unc.ii, chynae in orbicularis incisis unc.i, sassaphras dr.vi, ligni vitae /23/ unc.ii, senae unc.i.s, rhabarbari unc.s, agarici dr.iii, mechoachani unc.i, rasurae eboris, cornu cervi ana unc.s, seminum foeniculi, nucis moschati, caryophylli ana dr.ii, foliorum violarum, rorismarini, fumariae ana pugill.iii. Indantur in sacculo pro iii congiis cervisiae.

His a hydrope liberatus. Mense Augusto melancholia hypochondriaca cum capitis dolore laborabat.
℞: pilularum aggregativarum sc.i, gummi gambogiae gr.5. Cum gut.5 olei anisi et syrapi de pomis fiant pilulae ii: 8 sedes cum levamine magno.

Deinde:
℞: origani, absinthii, menthae ana M.s, semen milii, anisi tostorum ana unc.s, flororum chamaemelli, lavendulae, anthos, furfuris ana p.i, baccarum lauri dr.i, nucis moschati dr.s. Pulverizentur grosso modo, et insuantur panno serico et rubro, fiatque sacculus interbassatus in scuti stomachalis figuram, qui vino aliquo generoso respersus et
A sweating potion:
℞: sarsaparilla 2oz, sassafras root ½oz. Boil in 8 pints of spring water, reduce to 4 after soaking for twenty four hours. At the end add bruised cinnamon, 2dr, anise, caraway, coriander seeds each ½oz. Dose: 6oz hot, and sweating is provoked according to practice.

Afterwards he took laxative beer, prepared like this:
℞: sarsaparilla 2oz, china cut in rounds 1oz, sassafras 6dr, guaiacum 23/2oz, senna 1½oz, rhubarb ½oz, agaric 3dr, mechoachan 1oz, shavings of ivory, hartshorn each ½oz, fennel seeds, nutmeg, cloves each 2dr, violet, rosemary, fumitory leaves each 3 handfuls. Put them in a bag for 3 gallons of beer.

These freed him from dropsy. In August he suffered from hypochondrial melancholy with headache.
℞: pills of amber 2dr, powder for Galen’s simple hiera picra electuary 2sc. Make 12 pills with chicory syrup with rhubarb. Take 3 at bedtime. He was freed from the headache.
℞: aggregative pills 1sc, gamboge gum 5gr. Make 2 pills with 5 drops of anise oil and apple syrup. Eight stools with great relief.

Next:
℞: origanum, wormwood, mint each ½ handful, toasted seeds of millet, anise each ½oz, camomile, lavender, rosemary leaves each 1 pinch, bayberries 1dr, nutmeg ½dr. Powder coarsely, sew into a thin red silk cloth, and make a bag sewn in the form of a stomach shield.

2 ½oz] S.O.: 1oz. 8 1½oz] S.O.: unc.iis. | ½oz] S.O.: unc.i. 11 handfuls] pugillum can mean either a pinch or a handful; in most cases Hall wrote M. (Manus) for handful, and p. (pugillum) for pinch. In this instance he wrote pugill. I have followed S.O. in translating it as handfuls].
optime calfactus ventriculo applicetur, et ut opus esset reiteretur.⁵⁰

His remediis ab omnibus praedictis symptomatibus liberatus et curatus et per longum tempus convaluit.

[Case 28] /24/ Mistress Chandeler, opidana aetatis 36 vel circiter, quinta a partu die incidebat in febrem erraticam cum horrore, calore et rigore saepe in die et nocte.

℞: decoctionis cornu cervi cum succo limonum et aqua rosarum et saccharo ad gratam acetositatem lib.iii. Continue sumebat semper agitando ut pulverem cum decoctione biberet.

Hoc finito:
℞: cornu cervi praeparati dr.iii, aquae pluvialis lib.s. Bulliant ad unc.4, ebullitione facta adde syrupi papaveris rheadis unc.ii, aquae rosarum unc.i, olei vitrioli quantum satis: pro ii vicibus.

His ita factis sana facta.⁵¹

epilepsia per consensum ventriculi et melancholia hypochondriaca cruciatus, cum motus privationi digiti annularis et medii dextrae manus, et sensus amissione.

Vocatus ad ipsum, sic purgatus. Urina pondorosa, clara sicut aqua fontana, in quantitate multa.

---

Apply to the stomach sprinkled with some good wine and well heated. Repeat as is beneficial.

He was freed and cured of all the above symptoms by these remedies, and remained well for a long time.

[Case 28] /24/ Mrs Chandler of Stratford upon Avon, aged 36 or thereabouts: fell into an erratic fever on the fifth day after giving birth, with frequent shivering, hot spells and rigors day and night.

℞: hartshorn decoction with lemon juice, rose water and sugar for a pleasant sharpness, 3 pints. She took it all time, always shaking it so that she drank the powder with the decoction.

When this was finished:
℞: prepared hartshorn 3dr, rain water ½ pint. Reduce by boiling to 4oz. After boiling add syrup of field poppies 2oz, rose water 1oz, sufficient oil of vitriol. This is for two doses.

When these were finished, she recovered.

[Case 29] Mr Fortescue, aged 20: tortured by epilepsy with consent of the stomach, hypochondriac melancholy with loss of movement and feeling of the ring and middle fingers on the right hand.

When I was summoned to him, I purged him in this way. Urine:

heavy, clear like spring water, in large quantity.

---

℞: pilularum sine quibus dr.i, foetidae sc.ii, castorei sc.i, aquae boraginis quantum satis. Fiant pilulae 7: sedes v magnas.

Purgatione finita, motus et sensus digitorum reddeabant. 5 die Iunii anno 1623.

Die vi:

Venae cephalicae ad unc. vi sectio /25/ et eodem die hora cubitus pilulis de succino N. iii, ex quibus die sequenti iii sedes.

℞: castorei optimi, assae foetidae ana dr. s, radicis paeoniae subtiliter pulverizatae dr. i, aromatici rosati dr. ii. Misce cum syrupo de mentha, fiant pilulae 7 ex massa. Capiat unam in ingressu lecti.

Mane capiat ad nucis avellanae magnitudinem oipiatae huius:

℞: conservarum buglossi, boraquinis, anthos ana unc. i. s, confectionis alkermes dr. ii, electuarii laetificantis Galeni et de gemmis ana dr. s, pulverum radicis paeoniae, aristolochiae ana sc. i, rasurae eboris, cornu cervi, coralli ana sc. ii. Cum syrupo de hyssopo, lege artis fiat oipiata.

In instanti paroxysmo:

℞: benzoini, mumiae, picis nigrae ana sc. i. Uniantur cum succo rutae, fiat suffumigium pro naribus, aut eadem simul liquefacta naso intertori inungantur. ⁵²

Nota: sternutatorium ante usum opiatae mane:

℞: pyrethri, pulveris radicis paeoniae ana sc. ii, nucis moschati sc. i, ellebori nigri pulverizati sc. s. Fiat pulvis qui insuffletur in nares. ⁵³

Ex his per Dei misericordiam brevi tempore liberatus et nunc

⁵²Houllier, De morbis internis, p. 122. ⁵³Houllier, De morbis internis, p. 125.
℞: pills - sine quibus 1dr, foetidae 2sc, castor 1sc, sufficient borage water. Make 7 pills: seven large stools. After purgation, movement and feeling returned to the fingers. 5 June 1623.

6th:

Section of the cephalic vein to 6oz /25/ and the same day 3 amber pills at bedtime. The following day three stools from these.

8th:

℞: best castor, assafoetida each ½dr, peony root finely powdered 1dr, aromatic rose [powder] 2dr. Mix with mint syrup. Make 7 pills from the mass. Take one when going to bed.

In the morning take this opiate, the amount of a walnut:

℞: conserves of bugloss, borage, rosemary each 1½oz, alkermes confection 2dr, electuaries - Galen's laetificans, of gems each ½dr, peony root powder, aristolochia each 1sc, shavings of ivory, hartshorn, coral each 2sc. Make the opiate with hyssop syrup by the usual method.

At the time of an attack:

℞: benzoin gum, mummy, naval pitch each 1sc. Combine them with rue juice. Make a fumigant for the nostrils or after dissolving it, anoint the inside of the nose.

NOTE: he used this sneezing powder in the morning, before the opiate:

℞: Spanish pellitory, peony root powder each 2sc, nutmeg 1sc, powdered black hellebore ½sc. Make a powder to be blown into the nose.

These, through God’s mercy, freed him in a short time and he
10 ab hoc annis recte vivit.

℞: sacchari albi unc.4 cubebarum, grana paradisi, galangae, zingiberis ana dr.i, piperis longi dr.s, cinamomi dr.iii, vini albi lib.ii.

Stent 24 horas in infusione, postea colentur per manicam. Fiat potus quem ippocras vulgus appellat.54 Capiat unc.iii mane. Usa est glister ex olei seminum lini magno fructu.

Postremo capiat unc.iii sequentis syrupi:
℞: cinamomi crasso modo contusi unc.iii, calami aromatici unc.i.

Macerentur in vini Malvatici lib.ii per triduum idque in vase vitreo ad lentum ignis calorem. Coletur, colaturae adde sacchari lib.i.s. Lente omnia coquantur et fiat syrupus secundum artem.55

His liberata a flatu et cibum iterum capere potuit, et dixit se longe melius esse et a flatu liberam esse. Probatum.
is now alive and well ten years later.

[Case 30] Mrs Nash, a gentlewoman aged 62: suffered from phthisis for a long time, now with wind in the stomach and very marked hot spells /26/ and sweating from the mouth of the stomach to the top of the head, with great pain especially after food.

℞: white sugar 4oz, cubebs, grains of paradise, galangal, ginger each 1dr, long pepper ½dr, cinnamon 3dr, white wine 2 pints. Stand to infuse for twenty four hours, then strain through a sleeve. Make the potion commonly called hippocras. Take 3oz in the morning. She used an enema of linseed oil with great effect.

Finally take 3oz of the following syrup:

℞: cinnamon roughly crushed 4oz, sweet flag 1oz. Soak in Malmsey wine 2 pints for three days, in a glass vessel near the heat of a low fire. Strain. To the strained liquid add 1½lbs sugar. Boil it all slowly and make syrup according to practice.

These freed her from the wind and she could again take food.

She said she was very much better and freed from wind. This has been proved.

---

[Case 31] Generosus Kempson aetatis 60,
melancholia oppressus et febre divexatus cum
summo calore, nihilominus continui somno
arctior quam solet oppressus sine ullo
aegritudinis sensu, quasi stupidus.

Hic a me curatus sequentibus:
℞: foliorum malvae, betae, violarum, mercurialis, lupuli ana M.i.s.,
boraginis M.ii, epithymi unc.s, pulegii, rutae, absinthii, chamaemelli
ana M.s, seminum anisi, [...] carvi, cumini, rutae, foeniculi, urticis,
baccae lauri ana unc.s, polypodii quercini unc.i.s, senae unc.i,
corticium ellebori nigri dr.i. Coquantur in sero lactis ad lib.i.s.57
Colaturae ℞ unc.x, confectionis hamech, diaphaeniconis ana dr.v,
salis dr.i. Fiat glister, ii sedes cum flatuum magna copia. Detur
mane, et nocte reiteretur.

Raphanum incisum minutim plantis pedum alligari, aceto et sale
conspersum, 3a quaque hora renovandum, quo accursus vaporum
pravorum impediatur [...] deorsum retractis fuliginibus.58
Nox allis
longe quietior sine horribilibus somniis ut antea.

Potus ordinarius:
℞: aquae fontanae lib.4, syrupi limonum unc.i, zulapii rosarum
unc.i.s, cornu cervi praeparati sc.4, spiritus vitrioli tot guttas quot

---

56 Echoing Cicero, 'Scipionis somnium, Book VI', De Re Publica: arctior, quam solet, somnus complexus est | 57 Bruele, Praxis medicinae, p. 27: ℞: foliorum betae, malvae, violarum, mercurialis, lupuli, ana M.i.s, boraginis M.ii epithymi unc.s florum sambuci M.i.s seminum anisi, lini ana unc.i seminum carthami contusi, polypodii quercini ana unc.i.s senae Alexandrinae unc.i corticum ellebori nigri dr.i. coquantur in sero lactis q.s. ad lib.i.s. | 58 Ruland the Younger, De morbo Ungarico, p. 178: Iussi plantis pedum alligari raphanum incisum minutim, aceto et sale conspersum, tertia quaque hora renovandum, quo accursus vaporum pravorum, delirium tantum causantium, impediatur, deorsum retractis fuliginibus.

6 Hic a me curatus sequentibus] Originally in heading. 17 retractis] attractis.
[Case 31] Mr Kempson, a gentleman aged 60:

overwhelmed by melancholy and tormented by
fever with the very highest heat. He was
likewise continuously overcome by deeper

sleep than /27/ he was accustomed to,

without any sense of illness, as if unconscious.

I cured him with the following:

℞: leaves of mallow, beet, violet, mercury, hops each 1½ handfuls,
borage 2 handfuls, dodder ½oz, penny-royal, rue, wormwood,
camomile each ½ handful, seeds of anise, caraway, cumin, rue,
fennel, nettle, bayberry each ½oz, polypody of the oak each 1½oz,
senna 1oz, black hellebore bark 1dr. Boil in milk whey, reduce to 1½ pints. Take 10oz of the strained liquid, Hamech confection,
diaphoenicon each 5dr, salt 1dr. Make an enema: two stools with a

large amount of wind. Give in the morning and repeat at night.

Bind finely sliced radishes to the soles of the feet, sprinkled
with vinegar and salt, renewed every third hour. The attack of the
corrupt vapours should be hindered by this, the soot being attracted
downwards. The next night was more restful, without the terrible

dreams as before.

The usual drink:

℞: spring water 4 pints, lemon syrup 1oz, rose julep 1½oz, prepared

---

9 penny-royal] S.O. adds: p.ii [possibly confused by the similarity between pugillum (pinch) and pulegium (penny-royal)].  
19 terrible dreams] S.O.: starting or fear.  
sufficiunt ad gratam acetositatem. Deinde sanguisugae hemorrhoidis /28/ applicatae, extrahabitur sanguis ad unc.8.

Habuit restauratium Quercetani, folio 187 libr. Diaeteticonis Polyhistoriconis, sectio 3 caput 9.59

Adhuc tamen de stomacho sollicitus, tunc detur vomitorium:

Bene se habuit per dies 5, deinde relapsus in algorem et horrorem febris. Adhibito glistere, recte se habuit et medicos vale dixit.

Sic curatus praeter omnium expectationem et per multos annos laute vixit, atque haec omnia (divina annuente clementia)

quibus desperatus aeger ad bonam pervenit sanitatem.60

℞: cassiae noviter extractae dr.vi in aquae petroselini, terebinthinae

59Du Chesne, Diaeteticon polyhistoricon, p. 187; [there are instructions for two restoratives].
60Ruland the Elder, Centuria III, Curationum centuriae, p. 209: atque haec omnia sunt, quibus desperatus aeger ad bonam, laus Deo, pervenit sanitatem. [Divina annuente clementia occurs separately on the same page].

sectio 3 caput 9 sect. 4 Cap. 9 Diaeteticon Polyhistoricon has only three sections. The page and chapter references are correct for Sectio 3 Caput 9].
hartshorn 4sc, spirit of vitriol as many drops as needed for a pleasing acidity. Then leeches were applied to the haemorrhoidal veins: /28/ 8oz of blood were taken.

℞: bezoar stone 5gr, tincture of coral tincture 4 drops, in posset ale.

Urine: frothy with much sediment. He became much better. The enema was renewed along with the above drink which he very much enjoyed, and the bezoar stone powder and coral tincture were repeated with the desired result. He used a sneezing powder of tobacco only, to dispel sleep. He had Du Chesne’s restaurative,

He was still worried about his stomach, so an emetic was given:

℞: our emetic 6dr, syrup of violets 2oz, oxymel of squills 1dr. Four vomits, nine stools.

He was well for five days, then relapsed in a cold and shivering fever. He recovered after an enema was given, and said farewell to his physicians.

He was cured thus beyond all expectation, and lived very well for many years. *It was these (by divinely declared mercy)* which

restored a desperate patient to good health.

[Case 32] Mrs Garner, a gentlewoman of Shipston

aged 22: wretchedly weakened by a flux of the whites.

℞: newly extracted cassia 6dr in parsley water, turpentine washed in...
lotae in praedictae aquae dr.ii, gummi guaiaci dr.ii. Cum saccharo
fiat bolus.

/29/ Die sequenti, emplastrum sequentem applicare iubebam:
℞: unguenti Comitissae unc.i, gypsi, boli Armeni ana unc.s. Cum
albumine ovi, fiat emplastrum.

Postremo usus est trochischis astringentibus, Iohannis
Liébaut, liber 2 de Maladies des Femmes, folio 391: Prenez
coriandre preparee, graines d’ozeille, de plantain et d’agnus castus
de chacun dr.i, terre sigillete et bol armene, de chacun dr.s, poudre
del’ electuarie diatragacanth froid dr.i. Pulverisez le tout subtilement
et avec succe dissout en eau de plantain, facties une confection en
forme de roüelles ou tablettes, (adde gluten piscium) du poix de deux
dracmes. Maschez en une avant disné et suppé et avallez
incontinent apres, deux aut trois cueilleres de vin vermeil astringent.

Je suis asseuré par experience que ceste confection profite
infiniment pour quelque occasion que la matrice soit offence.

7 Maladies des Femmes| Hall interlined his French transcription with a translation in mixed Latin and English. I have broken the text up into phrases in the notes below. | Prenez coriandre preparee | R: coriandri praeparati/ | 8 graines dozeille | \coriandri praeparati/ | \semnum acetosa/ | 9 chacun/ | \ana/ | poudre del electuarie | \species/ | 10 Pulverisez le tout subtilement et avec succre \pulverizentur subtilissime cum saccharo/ | \eau/ | \aqua/ | 11 deux aut deux dracmes | \du poix de deux dracmes/ | 12 roüelles/ | \rotulis/ | du poix de deux dracmes | \pundere dr.ii/ | 13 Maschez en une avant disné et suppé | \eat one before dinner and supper/ | \and presently after drinke/ | 14 deux aut trois cuillerees de vin vermeil | \two or three spoonfuls of red wine/ | 15 Je suis asseure/ | \am certain/ | par experience que ceste confection profite infiniment | \from experience this confection expels/ | 16 infiniment | \illegible/ |
the same 2dr, guaiacum gum 2dr. Make a bolus with sugar.

/29/ The next day, I instructed her to apply the following plaster:
℞: comitissa ointment 1oz, gypsum, bole Armeniac each ½oz. Make a plaster with egg white.

Finally she used Jean Liébaut’s astringent trochees, Book 2 of *Maladies des Femmes*, page 391: take prepared coriander, sorrel seeds, plantain and chaste tree, each 1dr, sealed earth and bole Armeniac each ½dr, powder for cold diatragacanth electuary 1dr. Powder everything finely and, with sugar dissolved in plantain water, make a confection in the form of rolls or tablets (add fish glue), two drachms in weight. Chew one before dinner and supper and immediately afterwards swallow two or three spoonfuls of sour red wine. I am certain from experience that this confection is infinitely profitable on every occasion that the womb is affected.

---

6 Finally...391 S.O.: After I prescribed the following. 11 add fish glue] S.O.: add gum. tragac.
His fluxus refranatus et optime cito convaluit.

[Case 33] Brown sacerdos Romanus, febre Ungarica laborabat, in mortis periculo.

℞: poculi chymici dr.vi, syrupi violarum dr.ii, /30/ oxymellitis scillitici dr.i: vomitus vii, sedes iiii. Die sequenti vene sectio ad unc.vi.

Sequenti die a phlebotomia, potus:
℞: aquae fontanae lib.iii, syrupi granatorum, iulapii rosaceum ana unc.i.s, cornu cervi praeparati dr.iii, olei vitrioli quantum satis ad gratam acetasitatem. Transvasando hinc inde fiat iulapium.63 In iusculo accipiebat tinctuae coralli sc.i, et hora cubitus glister ex herbis apperientibus, pulvere senae laxativae et saccharo sordido: iii sedes.

Interdiu et noctu saepissime magnitudinem iuglandis sumendo:64
℞: rob ribum, conservae rosarum, conservae carnis citri ana unc.ii, corticum citri conditi unc.s, arantiorum conditorum, speciei liberantis ana dr.ii, cornu cervi praeparati sc.4, lapidis smaragdi, rubini, hyacinthi praeparati ana gr.vi, florum sulphuris dr.i, coralli rubri praeparati sc.i, succi granatorum unc.s, syrupi de acetasitate citri quantum satis. Fiat electuarium liquidum.65 Felici cum successu etiam usus absque lapidibus praedictis.

---

63Ruland the Younger, *De morbo Ungarico*, p. 265: ℞: aq. fontanae purae lib.iii, syrup. granator. iulapii rosac. ana unc.i.s., spir. vitriol. rectif. guttas tot, quot suff. ad gratam acetasitatem. Transvasando hinc inde f. iulapium iucundum. [See also /133/.

64Ruland the Younger, *De morbo Ungarico*, p. 168.

65Ruland the Younger, *De morbo Ungarico*, p. 267: ℞: conservae rosar. conserv. carnis citri rob ribium, ana unc.i, cortic. citri conditi unc.s. arantior. condit. specier liberantis ana dr.ii, lapidis smaragdi, rubini, hyacinth legit. praepar. ana gr.vi. florum sulphuris dr.i, corall rub. prep. sc.i, succi granatorum unc.s., syrup. de acetasitate citri q.s. Fiat elect. liquidum.
These controlled the discharge, and she very quickly recovered.

[Case 33] Browne, a Roman priest: suffered from Ungaric fever; in danger of death.

℞: the chymical cup 6dr, syrup of violets 2dr, /30/ oxymel of squills 1dr. Seven vomits, four stools. He was bled the next day to 6oz.

The day after venesection, a drink:

℞: spring water 3 pints, pomegranate syrup, julep of roses each 1½oz, prepared hartshorn 3oz, enough oil of vitriol for a pleasing tartness. Then from the straining, make a julep. He received tincture of coral 1sc in broth, and at bedtime an enema of the aperient herbs with laxative senna powder and unrefined sugar: three stools.

Take the amount of a walnut, day and night, often:

℞: blackcurrant juice, rose conserve, citron flesh conserve each 1oz, preserved citron skin ½oz, preserved oranges, liberans powder each 2dr, prepared hartshorn 4sc, prepared emerald, ruby, sapphire stones, each 6gr, flowers of sulphur 1dr, prepared red coral 1sc, pomegranate juice ½oz, enough syrup of sour citrons. Make a liquid electuary. He also used it successfully without the gems.
Cordi quoque robur conferebatur.\textsuperscript{66}

℞: conservae rosarum unc.i, tincturae coralli sc.ii, cornu cervi praeparati dr.i, diascordii dr.s, florum sulphuris praeparatarum sc.ii. Misce, diebus tribus usibus.

Ad sitem extinguendam:

℞: hordei unc.ii, liquiritiae unc.s, boraginis, cichorii ana M.s. /31/ Bulliant in lib.iii aquae ad lib.ii, adde salis prunellae dr.s, cornu cervi praeparati dr.iii. Bulliant parum. Capiat iii haustos in die.

Cibos insuper conspergat pulvis huius cardiaci et alexiterii portiuncula:

℞: margaritarum praeparatarum, coralli rubri praeparati, cornu cervini praeparati, granatorum praeparatorum ana gr.8, fragmentorum hyacinthi, smaragdi, rubini ana gr.iii, folii auri N.i. Misce, fiat pulvis.\textsuperscript{67}

Alio ilulapeo finito sequenti usus:

℞: aquae fontanae lib.ii, cornu cervi praeparati, cornu cervi crudi ana dr.iii, specierum liberantis sc.4. Coque ad lib.s consumptionem. Adde succi limonum quantum satis ad iucundam aciditatem. Coquatur iterum et despumetur, purificetur cum albumine ovi. Fiat iulapium de quo tres capiat singulis diebus haustus, mane binos, meridie tertium.\textsuperscript{68}

Praeter omnium spem redivivus et sanitate integrae sacerdos restitutus. His remediiis, maxime decoctione cornu cervi, infinitos

\textsuperscript{7} salis| ☉.
The heart was also strengthened:

℞: rose conserve 1oz, coral tincture 2sc, prepared hartshorn 1dr, diascordium ½dr, prepared flowers of sulphur 2sc. Mix. Use for three days.

To quench thirst:

℞: barley 2oz, liquorice ½oz, borage, chicory each ½ handful. Boil in 3 pints water, reduce to 2 pints, add saltpetre ½dr, prepared hartshorn 3dr. Boil briefly. Take 3 draughts daily.

He also sprinkled his food with this heart-fortifying and poison-resisting powder:

℞: prepared pearls, prepared red coral, prepared hartshorn, prepared garnet each 8gr, gold foil 1 leaf. Mix. Make the powder.

When the julep was finished he used the following:

℞: spring water 2 pints, prepared hartshorn, raw hartshorn each 3dr, liberans powder 4sc. Boil, reduce by ½ pint. Add enough lemon juice for a pleasant acidity. Boil again, skim, purify with egg white. Make a julep, of which he is to take three draughts each day, two in the morning, the third in the afternoon.

The priest recovered beyond all hope, and returned to full health. With these remedies, especially the hartshorn decoction, I

Dissolvatur saccharum in aqua cinamomi […] fiat confectio in morsellis et ponderet quilibet dr.ii.s.71

Gestet ceratum stomachale:

Post pastum:

℞: seminum coriandri praeparatorum dr.ii, foeniculi, anisi ana dr.i, carvi dr.s, liquiritiae unc.s, zingiberis dr.ii, radicis galangae, nucis moschati, cinamoni, caryophylli ana dr.i. Incidantur minutim, addito saccharo. Fiat pulvis sumendus a pastu, vel fiant tabulae saccharo

---

rhubarb each 2dr, mechoachan 2oz, ginger 4sc, spikenard ½dr, cinnamon 1dr overnight. Strain again, boil with sugar and make a perfectly concocted syrup. Add to this loosening rose syrup /33/ 4oz, manna 2oz, and keep for 4 doses. He was very well purged with the desired result.

After purging, take one sweetmeat at a time, morning and evening, two hours before meals for a whole week:

℞: powders - Galen’s laetificans, sweet diamoschu, aromatic rose each 1dr, cinnamon ½dr, clean pistachios ½oz, alkermes confection, saffron, stag’s heart bone, red coral, pearls each 1sc, prepared steel 2dr, sufficient sugar. Dissolve the sugar in cinnamon water, make a sweetmeat in bite-sized pieces weighing about 2dr.

He should wear a stomach salve:

℞: labdanum 2dr, wax ½oz, mace oil 2dr, Gabrieli’s aromatic rose powder 2sc. Make a stomach plaster. He used an enema with emollients and carminatives with sugar.

After meals:

℞: prepared coriander seed 2dr, fennel, anise each 1dr, caraway ½dr, liquorice ½oz, ginger 2dr, galangal root, nutmeg, cinnamon, cloves each 1dr. Cut small, add sugar. Make a powder to be taken

after meals, or make tablets with sugar dissolved in rose water.

With these he recovered rightly and properly, and thanked me.

[Case 35] /34/ Cure of epilepsy by consent,

for the 6-month-old son of the Reverend

Walker of Ilmington.

Slices of peony root were hung round his neck. I prescribed rue

juice mixed with strong vinegar applied to his nostrils when the fit

molested him. Using this brought him immediately to himself, but he

quickly suffered a recurrence. The fits were shortened though, when

it was applied to the nostrils.

I instructed them to apply this plaster to the area of the heart:

℞: Venice treacle 1dr, powdered peony root ½dr. Mix. Peony root

powder was also sprinkled on his hair.

These freed him from all the attacks.

[Case 36] Elizabeth Hall, my only daughter:

disfigured by spasm of the mouth. See the

signs in the Chapter ‘De Tortura’, Book 1 of

Valesco de Taranta, page 88.

She was successfully cured in this way:

\[4\text{ Case 35}]\text{ S.O.: Observ. XXXV [First Century], p. 31.}\text{ 8 strong}]\text{ S.O.: white-wine.}\text{ 17 Case 36}]\text{ S.O.: Observ. XXXVI [First Century], pp. 31-34.}\]
℞: pilularum cochiarum, aurearum ana dr.i. Fiant pilulae 10, capiat 5: primo die 7 sedes, 2a 5 sedes. Fomentur loci aqua vitae et theriaca Andromachi.

Nucha usa est unguento sequenti:
℞: unguenti Martiati magni unc.i, oleorum laurini, petrolei, castorei, olei terebinthinae ana dr.s, de lateribus dr.s. /35/ Huius usu magnum habuit fructum.

Menstruis obstructis, sic purgata:
℞: pilularum foetidarum dr.i, castorei dr.i, de succino, rhabarbari, agarici ana sc.i.s. Hora matutina, 5 pilulas capiebat instar pisi: sedes 8, vomitum i. Die sequenti menstrua fluebant.

Pro occulo ophthalmia laborante:
℞: tutiae praeparatae dr.i, compositionem quaere folio 5 huius libri. Gutta una vel altera in oculo destillata.

Menstruis sistentibus, ordinabam decoctionem sequentem sudoriferum:

In principio Aprilis Londinum decessit. Die 22 domum reversa, frigore per viam accepto. Iterum in torturam oris contrario latere, antea sinistra, nunc dextra misere afflicta incidebat. Iterum, laus Deo, sequentibus curata:
℞: pills - cochiae, aureae each 1dr. Make 10 pills. Take 5: Seven stools the first day, five on the second. The parts were fomented with aqua vitae and Venice treacle.

She used the following ointment on her neck:

℞: Martiatum magnum ointment 1oz, oils of laurel, petroleum, castor, oil of turpentine each ½dr, of bricks ½dr. /35/ Using this gave much profit.

Her periods were obstructed, so she was purged thus:

℞: pills - foetidae 1dr, castor 1dr, of amber, rhubarb, agaric 1½sc.

She took 5 pills the size of a pea early in the morning. Eight stools, one vomit. The next day her period flowed.

For suffering from inflammation of the eye:

℞: prepared tutty 1dr, for its composition see page /5/ of this book.

One or two drops were instilled in the eye.

When her periods stopped, I prescribed the following sweating decoction:

℞: guaiacum 2oz, sassaphras ½oz, sarsaparilla 1oz, china 6dr.

Soak for 24 hours, then boil in 8 pints spring water, reduce to 4.

Using this day by day restored the former appearance of her mouth and face. The use of sassaphras oil was not omitted, because it is the equal of anything for relieving dryness of the nerves. Her neck was anointed and so she was healed. 5 January 1624.

At the beginning of April she went to London. Returning home on the 22nd, she caught cold on the way. Once more she fell into spasm of the mouth on the other side, previously on the left, now...

6 Using...8 thus] S.O.: By this she had great advantage, her courses being obstructed. Thus I purged her. 11 one vomit] S.O. omits. 14 One or two] S.O.: two or three.

Iterum a me spacio xvi dierum rite curata.

℞: pilularum de succino dr.s, aurearum sc.i. Fiant pilulae 5, capiat hora cubitus. Eadem nocte collum et verticem oleo sassaphras inungi iubebam. 36 Mane dabam dr.i.s pilularum Ruffi et iterum usa est oleo cum aqua vitae, et oculo instillare iubebam aquam ocularem praedictam.

Sed cum oleo sassaphras carebam, loco eius:

℞: pulveris castoreii, myrrhae, nucis moschatae, croci, ana sc.i, olei ruta, laurini, petrolei, terebinthini ana dr.ii, unguentui Martiati unc.s, olei costini, de piperibus ana dr.i. Sed fomentetur cervix aqua vitae in qua nux moschata, cinamomum, caryophillus, piper macerentur. Nux quoque moschata frequenter manducanda a Platero summe commendatur. 79 Usa oleo succini naribus et sumitati capitis. *Masticet radicem pyretri in partem sanam*. 80

Pilulis sequentibus saepe purgata:

℞: pilularum foetidarum sc.i, castoreii pulverizati sc.s, pilularum Ruffi, de succino ana sc.i. Fiant pilulae N.5. His rite adhibitis recte

---

wretchedly affected on the right. Again, praise God, she was cured with the following.

See Jacques Houllier, *De Morbis Internis Book 1*, Chapter 11, pages 96, 97, 98:

Felix Platter, *Book 1*, ‘in Motus Impotentia’, page 375:

See page 102, Guillaume Rondelet, chapter 38, *Methodus Curandorum Morbos*:

See page 394, cure 87, Amatus Lusitanus, *Centuria 4*.

I did indeed cure her again within sixteen days:

℞: pills - amber ½dr, aureae 1sc. Make 5 pills, take at bedtime. I instructed her to anoint her neck and the top of her head with oil of sassaphras the same night. /36/ I gave 1½dr Ruffus’s pills in the morning, and she also used oil with aqua vitae. I instructed her to drip the above eyedrops into the eye.

As I was out of sassaphras oil, in its place:

℞: powders of castor, myrrh, nutmeg, saffron each 1sc, oils of rue, laurel, petroleum, turpentine each 2dr, Martialium ointment ½oz, oils of costus, peppers each 1dr. The top of the head was washed with aqua vitae in which nutmeg, cinnamon, cloves and pepper were soaked. *Nutmegs also should be chewed frequently*, as Platter strongly recommends. She used amber oil to the nostrils and the top of the head. *Chew pellitory of Spain on the healthy side*.

She was purged often, with the following pills:

℞: pills foetidae 1sc, powdered castor ½sc, pills Ruffus’s, amber each 1sc. Make 5 pills. These, correctly used, cured her rightly and

---

3 See... 8 4] S.O. omits all the citations. 18 top of the head] S.O.: the neck. 20 Nutmegs...recommends] S.O.: she eat [sic] nutmegs often. 25 These... high] S.O.: and thus she was restored.
riteque curata, laus Deo Optimo Maximo.

Eodem anno 24 die Maii, febre erratica afflicta, modo ardore
mox sudore, iterum frigore, spacio dimidii horae saepe in die
divexata. Sic purgata:

℞: radicis foeniculi, petroselini ana M.s, corticum radicis sambuci
M.ii, radicis ireos vulgaris, rubiae tinctorum ana M.i, radicis
asparagi M.ii. Bulliant in satis quantum aquae ad lib.vi. Colaturae
adde rhabarbari, agarici ana unc.s, senae unc.vi, mecoatiani
unc.i, calami aromatici unc.i, seminum anisi unc.i, cinamomi
unc.s. Vase clauso, lege artis, fiat maceratio, iterum coletur.
Colaturae adde sacchari quantum satis. Fiat syrupus bene coctus.
Huius recipe unc.4, rhabarbari dr.ii, macerate /37/ in unc.v aquae
cichoriii. Misce. Dentur cochlearii 7 stomacho ieiuno, unaque die 7
vel 8 sedes sine torminibus.

℞: sarsaparillae unc.i, sassaphras dr.ii, guaiaci unc.i, liquiritiae
unc.s, herbarum cichorii, salviae, rosmarini ana M.s. Bulliant in
lib.x ad 5. De quo calide mane capiat haustum.

_Balsamoleo sequenti pro inunctione spinae quoque utebatur, sic
parato:_

℞: gummi galbani, bdelli dissoluti in aqua vitae ana unc.s, benzoini
unc.i, styraici liquidi dr.i, foliorum rutae, chamaepytios, flororum
staechados, lavendulae ana dr.i, radicis costi unc.s, castorei sc.i.

Infundartur incisa et pulverizata, in aqua vitae, stent in maceratione
in calore per aliquot dies ante usum, eoque fricet spinam.81

Post horum usum, omnia symptomata remisere et quotidie ad
integram sanitatem, Deo soli laus esto, intra paucos dies pervenit

---

81Platter, _Observationum [...] libri tres_, p. 220.
properly, praise almighty God most high.

In the same year, 24 May, she was vexed with an erratic fever, now hot, soon sweating, then cold, often troubled within half an hour. She was purged in this way:

℞: fennel, parsley roots each ½ handful, bark of elder root 2 handfuls, common iris root, tincture of madder 1 handful, asparagus roots 2 handfuls. Boil in sufficient water to 6 pints. To the strained liquid add rhubarb, agaric each ½oz, senna 6oz, mechoachan 2oz, sweet flag 1oz, anise seeds 1oz, cinnamon ½oz.

Soak in a closed vessel by the usual method, then strain. Add sufficient sugar to the strained liquid, make a well boiled syrup. Take 4oz of this, rhubarb 2dr, soak /37/ in 5oz chicory water. Mix. Give 7 spoonfuls on an empty stomach: seven or eight stools without discomfort in one day.

℞: sarsaparilla 1oz, sassaphras 2dr, guaiacum 1oz, liquorice ½oz, leaves of chicory, sage, rosemary each ½ handful. Boil in 10 pints water, reduce to 5 pints. Take a draught hot, in the morning.

The following balsam was used to anoint the spine, prepared in this way:

℞: galbanum and bdellium gums. Dissolve ½oz each in spirits, benzoin 1oz, liquid styrax 1dr, rue and ground pine leaves, French lavender and ordinary lavender flowers each 2dr, costus root ½oz, castor 1sc. Infuse, sliced and pounded, in aqua vitae, stand to soak in the heat for a few days before use. Rub the spine with it.

An hour after using it, all symptoms diminished, and daily over
liberata a morte et mortiferis morbis, et per multos annos sana facta fuit.\textsuperscript{82}

[Case 37] Domina Sandes, post purificationem, haemorrhoidarum tumore et dolore misere lancinata.

Ordinabam inungi unguento populeono ad verrucales hemorrhoidarum:

\textit{℞: }\textit{vitellum ovi unius, conquassetur bene in oleo rosato in aestate, in hyeme cum oleo amygdalarum dulce, et adde parum croci pulverizati et lineatur locus.}\textsuperscript{83} Hoc expertum est. Remollit hemorrhoidas duras et remit dolores.

Curata.

[Case 38] \textbf{/38/} Magister Quiney, tussi gravi cum magna phlegmatis copia et cibi vomitu, febre lenta debilitatus, urina rubra absque sedimento.

\textit{℞: }\textit{agarici trochischati dr.i.s, thuris, masticis ana dr.s, terebinthinae quantum satis. Fiant pilulae ex dr.i, 5 in introitu lecti sumendi.}\textsuperscript{84} In condimentis crocus quia pectori prodest: et bellarium sinapis cum melle, egregie expectorat.\textsuperscript{85} \textit{℞: }\textit{hydromellis simplicis recenter parati cum melle electo lib.i.s. Addendo passularum pinguium exacinatarum unc.i, caricarum}

a few days she reached complete health, freed from death and deadly illness and has remained well for many years.

[Case 37] Lady Sandys, after her purification:

wretchedly attacked by swelling and pain of the haemorrhoids.

I prescribed populeon ointment to be anointed on the swollen haemorrhoids.

℞: one egg yolk, beat well with rose oil in summer, sweet almond oil in winter, and add a little powdered saffron and rub on the spot.

This is well tested. It softens hard haemorrhoids and removes pain.

Cured.

[Case 38] Mr Quiney: weakened by a bad cough with a large amount of phlegm, vomiting food, a slow fever. Urine: red, without sediment.

℞: trochischated agaric 1½dr, frankincense, mastic each ½dr, sufficient turpentine. Make 5 pills from 1dr. Take 5 on going to bed.

Saffron in seasonings because it benefits the chest, and mustard with honey stimulates expectoration very well.

℞: simple hydromel freshly prepared, with choice honey 1½lb. Add fat stoned raisins 1oz, 10 fat figs, orris root, sweet flag each 1dr. Boil

---

89 Platter, Observationum [...] libri tres, pp. 201-202: R succi liquiritiae dr.ii, myrrhae dr.i, gummi tragach sc.i, sacchari candi et penid. an. dr.i cum affusa aqua ros. fiat morselli. Teneat unam in buccis cubitum iturus, sinatque sponte dissolui et cubet in dorso. | 90 Platter, De functionum laesionibus, p. 454; [see also fn. /38/]. | 91 Platter, Observationum [...] libri tres, p. 318: Emulsionem seu lac ex amygdalis dulcibus, additis pineis et seminibus aliquibus cucurbitae recentibus contuisis, expressum ad unc.iii dissoluti in eo sacchari ros.tab. dr.ii. Alternis matutinis tepidum ieiunus bibebat, in eoque ad septimanas usque quatuor perserverabat.

16 aetatis...20 aetatis] Note two different ages. The second has been added a different ink.
For hoarseness:

℞: liquorice juice 1dr, myrrh ½dr, tragacanth gum 1sc, sugar candy and barley sugar each ½dr. Make bite-sized pieces. He should hold one inside the cheek when going to bed and allow it to dissolve on its own, while he lies on his back. Saffron in seasonings benefits the chest, and mustard with honey stimulates expectoration very well. Emulsion or milk of sweet almonds, with some added pine nuts, and freshly bruised gourd seeds, squeeze out 4oz. Dissolve in it rose sugar tablets 2dr. He drank this lukewarm, fasting on alternate mornings, and continued it for two weeks.

He was not completely freed, and the following year fell into the same illness. After trying many treatments in vain, he sleeps peacefully with the Lord. He was of good character, expert at languages, and for his young age learned in everything.

[Case 39]\(^9\) /40/ Joan Judkin of Southam, aged 50: with trembling and weakness of the arms and legs. She then feels a vapour rising to the heart, then the throat, until she thinks she going to be suffocated. Age: 40.

---

\(^9\)See Appendix B: New Patient Identifications.

5 Saffron...well] S.O. omits. 16 Case 39] S.O.: Observ. XXXIX [First Century], p. 36. 17 aged 50] As S.O.; I read this as an inadequately deleted correction. 20 Age 40] S.O. omits; I read this as the corrected, and correct, age.
℞: Mercurii vitae gr.5, diaphaeniconis dr.i. Misce, ii sedes. Eiciebat vermex ii, deinde theriaca Andromachi dr.i in possetalam.

Iterum purgata:
℞: Mercurii vitae gr.vi, diaphaeniconis dr.i. Misce, 4 sedes; postremo theriacam Andromachi cum rasurae cornu cervi.

*His paucis spacio 4 dierum veluti miraculose annuente et adiuvante sic, Deo Optimo Maximo omnium symptomata evanuere.* Campana pro ea bis sonabat.

[Case 40] Magister Winter aetatis 4, vermibus, febre lancinatus.
℞: suppositorium ex melle; potus decoctio cornu cervi praeparati et crudi; emplastrum contra lumbricos pro umbilico. Corpus unc.s mannae in iusculo purgatum, ex quo vermes mortuos multos cum excrementis foetidis expellebat.

In iusculo et cibo usus pulveri sequenti:
℞: coralli praeparati, margaritarum praeparatarum, cornu cervi praeparati, granatorum praeparatorum ana gr.8, fragmentorum hyacinthi, smaragdi, rubini ana gr.iii, folii auri N.i. Usus syrupo papaferis sensim deglutiendo, cum syrupo capillarum veneris pro tussi.

Hunc quadribus diebus iuvante Deo sanum feci.

---

92 Ruland the Elder, 'Centuria III', *Curationum [...] centuriae*, p. 199. | 93 Platter, *De vitii*, p. 985: Ad interimendas ascarides, suppositorium ex melle coctum, permiscendo Aloen et Fella, valde est efficax [honey suppositories are mentioned elsewhere, but only here in connexion with worms].

1 Mercurii ☿.  4 Mercurii ☿.
℞: mercurius vitae 5gr, diaphoenicon 1dr. Mix. Two stools; she passed two worms. Then Venice treacle 1dr, in posset ale.

She was purged again:
℞: mercurius vitae 6gr, diaphoenicon 1dr. Mix: four stools. Finally, Venice treacle with hartshorn shavings.

By these few, within four days, with the favour and help of almighty God most high, all her symptoms vanished as if miraculously. The bell sounded for her twice.

[Case 40] Mr Winter, aged 4: attacked by worms and fever.
℞: a honey suppository. To drink: a decoction of prepared and raw hartshorn; ointment for worms on the umbilicus. His body was purged with ½oz manna in broth which expelled many dead worms with foul-smelling excreta.

He took the following powder in broth and food:
℞: prepared coral, prepared pearls, prepared hartshorn, prepared garnets each 8gr, pieces of zircon, emerald, ruby each 3gr, gold leaf 1 piece. He used poppy syrup, to be drunk slowly, with maidenhair syrup for the cough.

I cured him with God’s help, in three days.
[Case 41] Fortescue generosa, tussi
vehementissima et vermis lancinata, aetatis 12.
Suppositorium ex melle; umbilico emplastrum contra lumbricos.

Pro tussi:

℞: sulphuris ignem experti unc.s, belzoini seu assae odoratae sc.s.
Miscentor in tenuissimum pulverem rediguntor. Dividetur in partes 12, detur pars una omni die mane, et vesperi cornu cervi.

His liberata et sanata.

[Case 42] Domina Throckmorton aetatis 35,
cardialgia, melancholia cum hysterica affectione.
℞: rhabarbari dr.i, agarici sc.ii, senae unc.s, cinamomi parum. Fiat maceratio in lib.s vini absinthii ad unc.vi. Colaturae ℞ coch.vi.
syrupi cichorii cum rhabarbaro coch.ii, et sic per iii dies. Sexties in die diecit, tertia nocte copiosius narrabat fluxisse mensis quam iam multis annis antea, et sic pro eo tempore missas fecit medicinas. 2 Martii.

Me rediunte mensi Aprili primo die, purgabam:

℞: pilularum sine quibus, Ruffi ana dr.i. Fiant pilulae 9. Dentur iii hora somni.

Corpore purgato, vino sequenti chalybeato usa ad coch.ii, deinde ad 4 et sex, sensim augendo in ea ore feret:

---

94 Platter, De vitis, p. 985: see fn. above. | 95Ruland the Elder, 'Centuria III', Curationum [...] centuriae, p. 226.
Mrs Fortescue, a gentlewoman: attacked by a most violent cough and worms. Age: 12.

A honey suppository; a plaster against worms on the umbilicus.

For cough:

℞: flowers of sulphur ½oz, benzoin (i.e. assa odorata) ½sc. Mix. Render into a very fine powder. Divide into 12 parts, give 1 part each day in the morning and with hartshorn in the evening.

She was freed by these, and cured.

Lady Throckmorton, aged 35: heartburn, and melancholy with an affection of the womb.

℞: rhubarb 1dr, agaric 2sc, senna ½oz, a little cinnamon. Soak in ½ pint wormwood wine, to 6oz. Take 6 spoonfuls of the strained liquid, chicory syrup with rhubarb 2 spoonfuls, and continue the course for 3 days. She evacuated six times a day. She told me that on the third night her period flowed more abundantly than for many years, and so for a time she discontinued the medicines. 2 March.

When I returned on 1 April, I purged her:

℞: pills - sine quibus, Ruffus’s each 1dr. Make 9 pills, give 3 at bedtime.

After her body was purged, she used the following steeled wine, about 2 spoonfuls, then 4 then 6, gradually increasing what

---

℞: chalybis praeparati unc.i, corticis medii fraxini, tamariscis, radicum capparum ana unc.s, ligni sassaphras, iuniperi ana dr.vi, radicis enulae campanae, angelicae, galangae, calami aromatici ana dr.ii, /42/ rasurae eboris, cornu cervi, santali citrini ana dr.iii, herborum absinthii, chamaephytos, ceterachi, epithymi, melissae, chamaedryos ana p.ii, florum boraginis, buglossi, scabiosae, genestae ana p.i, cinamomi unc.s, caryophyllorum, zingiberis, macis, nucis moschatae ana dr.i.

Omnibus crasso modo contusis et invicem mixtis, infundantur cum vino optimo generoso lib.4. Ad macerandum ponantur in balneo Mariae tepido, vase bene clauso, per tres quatuorve dies. Postea colentur per manicam Hippocraticam aliquot vicibus.96 Detur ut supra, et utetur exercitione.

Pulvere post pastum sequenti utatur:
℞: seminum coriandri praeparatorum dr.i, foeniculi, anisi ana dr.s, carvi sc.i, florum cordialium ana dr.i, maioranae dr.s, radicis liquiritiae, enulae campanae ana dr.i, zingiberis dr.i, radicis galangae, nucis moschatae, caryophyllorum ana dr.s. Grosso modo contundantur, addito saccharo, fiat pulvis.

6 Case 43| S.O.: Observ. XLIII [First Century], p. 39.
pustulas. _Lavit quotidie aqua praedicta quae postea per se siccabantur._ _Hanc lotionem cum continuasset intra paucos dies facies ex toto optime sanata et bene colorata._

---

[Case 44] Elizabeth Kenton de Hanington aetatis 50, fluxu sanguinis ex ore.

℞: syrupi papaveris rheadi unc. ii, aquae scabiosae unc. iii, rosarum parum. Detur una pars mane, altera sero.

---

[Case 45] /44/ Simons de Knole, venae ruptae pulmonis, vomitus sanguinis curatio; aetatis 40.

℞: rhabarbari pulverizati dr. ii, syrupi capillarum veneris unc. i, aquae cichorii unc. 4. Misce.

℞: philonii Persici dr. i (in sistendo de sanguine summe laudatur a Valeriola) syrupi de myrtillo unc. i, aquae plantaginis unc. 4. Misce. Capiat lac caprinum cum saccharo et hora cubitus conservae rosarum rubrarum dr. i.

---

16 pulmonis] in margin: added in a different ink. 17 veneris] _OCCIDENTALISM_.
morning and evening. She washed daily with the above water, which afterwards dried by itself. After she had continued with this lotion for a few days, her face was entirely healed in every part, and she was well coloured.

[Case 44] Elizabeth Kington of Hunington,
aged 50: with a flux of blood from the mouth.

℞: wild poppy syrup 2oz, scabious water 3oz, a few roses. Take 1 part in the morning, another in the evening.

℞: conserve of red roses 1oz, bole Armeniac, haematite, red coral, sealed earth each 1sc. Make a mixture with poppy syrup. Take as much as a bean after the julep.

Cured.

℞: powdered rhubarb 2dr, maidenhair syrup 1oz, chicory water 4oz. Mix.

℞: philonium Persicum 1dr (highly praised by Valleriola for stopping blood) syrup of bilberries 1oz, plantain water 4oz. Mix. Take goat’s milk with sugar, and at bedtime, conserve of red roses.

---

His paucis cito, tuto, iucunde curatus.

[Case 46] Cooper marita de Pebwort aetatis 48, sentit auram seu flatum a pedibus ascendentem in stomachum, extemplo male se habet, et fere ad deliquium animae.

Postea usa pulvere sequenti post pastum:

℞: rasurae eboris, cornu cervi ana dr.i, speciei aromaticum rosatum Gabrielis dr.s, seminum coriandri, foeniculi, anisi ana dr.i, carvi dr.s, florum cordialitum dr.i, maioranæ dr.s, radicis liquiritiae, enulae campanae ana dr.i, zingiberis, galangae, nucis moschatae, caryophylli ana dr.s, croci sc.i. Contundantur grosso modo et adde saccharum rosarum tabulatum ad pondus omnium. Post pastum coch.s. Pulvis inquit auro dignus. Stomacho emplastrum ex labdano, cera, caranna et specie aromatico et oleo macis.

His solis ab omnia symptomata liberata et curata.

[Case 47] Scorbuti, melancholias hypochondriacas, cordis palpitationis, capitis et iuncturarum doloris, ophthalmiae, vertiginis, morphiae cura experta.

Generosa Wagstaffe de Warwick, annorum 46, aegritudinibus istis chronicis, paene consumpta. Urina reddebaratur, hodie clara sicut 103

He was cured quickly, safely, pleasantly by these few.

[Case 46] Cooper, a married woman of Pebworth, aged 48: feels a breath or wind rising from her feet to the stomach. She feels ill at once and almost faints.

℞: pills - foetidae, Ruffus’s each 4sc. Make 9 pills. Take 3 at bedtime.

Next she took the following powder after meals:

℞: shavings of ivory, hartshorn each 1dr, Gabrieli’s aromatic rose powder ½dr, seeds of coriander, fennel, anise each 1dr, caraway ½dr, cordial flowers 1dr, marjoram ½dr, liquorice and elecampane root each 1dr, ginger, galangal, nutmeg, cloves each ½dr, saffron 1sc. Pound coarsely, and add an equal weight of rose sugar tablets: after meals, ½ spoonful. She said this powder was worth gold. For the stomach: plaster of laudanum, wax, caranna, the aromatic powder and mace oil.

She was freed and cured of all symptoms by these alone.

[Case 47] Proven cure of scurvy, hypochondriac melancholy, heart palpitations, pain in the head and joints, inflammation of the eye, giddiness, skin rash.

Mrs Wagstaffe, a gentlewoman of Warwick, 46 years: almost wasted away by these long-standing illnesses. She passed changeable
aqua fontana, crassa turbida. Ex urina frequenti mutatione,
iudicabam illam scorbuto laborare, nec me fefellit opinio, nam
maculis lividis et purpuris brachia conspurcata, cum aliis multis
symptomatibus quae nunc describere longum erit.

Ego in consilium adhibitus hanc sequenti sanam reddidi:
℞: radicum cichorii, buglossi ana unc.i, foeniculi, ireos, corticis
tamariscis ana unc.s, enulae campanae, foliorum absinthii ana
dr.iii, maioranae, chamaepityos, chamaedryos, fumariae ana dr.ii,
florum cordialium ana dr.i, seminum anisi, foeniculi, petroselini
ana dr.i.s, foliorum senae unc.i.s, carthami contusi unc.i.
Contundantur et indantur in lib.ii vini albi. Bulliant ad libram,
coletur. Colaturae adde syrupi sceletyrbici Foresti unc.iii. Usa est
per 5 dies, dosis unc.4, ex quo omni die sedes vi vel 7, aliquando 8.
Ex hac purgatione a cordis palpitatione paene liberata.

Corpus rite purgatum, suasi ut vino hoc successive uteretur:
℞: radicum apperitivarum ana unc.s, absinthii unc.ii, maioranae
dr.i.s, /46/ florum cordialium ana p.i, corticis tamariscis,
capparum ana dr.i, seminum foeniculi, anisi ana dr.ii, carvi dr.i,
spicae sc.i, summitatis centaurii dr.i.s, chalybis praeparati dr.iii.
Fiant, indantur in vini albi lib.ii. Capiat ante cibum horis tribus, et
hora ante pastum capiat succum cochleariae praeparatum in vino,
coch.4 vel 5, semel vel bis si opus esset.

Capiat dosem pilularum sequentium, nam alvus semper
lubrica tenenda:
urine, one day clear like spring water, then thick and turbid. From the frequent change of the urine I judged that she suffered from scurvy. Nor did my judgement deceive me, for her arms were polluted with livid, purple spots, with many other symptoms which it would take too long to describe now.

I was summoned for consultation, and restored her health with the following:

℞: chicory, bugloss roots each 1oz, fennel, iris, tamarisk bark each ½oz, elecampane, wormwood leaves each 3dr, marjoram, ground-pine, germander, fumitory each 2dr, cordial flowers each 1dr, seeds of anise, fennel, parsley each 1½dr, senna leaves 1½oz, bruised safflower 1oz. Pound and soak in 2 pints white wine. Boil, reduce to 1 pint, strain. Add Foreest's scheletyrbic syrup 3oz. She used it for five days. Dose: 4dr, from which six or seven stools, sometimes eight, every day. She was almost freed from the heart palpitations by this purge.

Once her body was rightly purged, I advised her to use this wine next:

℞: the opening roots each ½oz, wormwood 2oz, marjoram 1½dr, 46 cordial flowers each 1 pinch, tamarisk bark and capers each 1dr, fennel, anise seeds each 2dr, caraway 1dr, spikenard 1sc, centaury tops 1½dr, prepared steel 3dr. Make it, put in 2 pints white wine. Take three hours before food, and take prepared scurvy-grass juice in wine, 4 or 5 spoonfuls an hour before dinner, once or twice as needed.

Take a dose of the following pills, for the bowels movements

\textsuperscript{106}Platter: \textit{Observationum} [...] \textit{libri tres}, p. 69.
should always be kept slippery:

℞: aloes 2dr, myrrh ½dr, gum ammoniac dissolved in vinegar 1sc, agaric, rhubarb each 1½dr, wild ginger, gentian roots each ½dr, mastic 1sc, spikenard, parsley seeds each ½sc. Make a mass with wormwood juice in the form of thickened extract. Take ½dr once a week, or a little more, two hours before dinner. If greater defaecation is required, one may add aggregative pills. Dose: 1 pill.

A powder after meals:
℞: cloves, galangal root, nutmeg, cinnamon each ½dr, prepared coriander seed, elecampane root each 1dr, fennel and anise seeds each ½dr, caraway 1 sc, liquorice root 2dr, ginger 1dr. Pound coarsely, add rose sugar tablets 2oz. Mix.

Then to anoint the region of the heart:
℞: motherwort juice, nard oil each ½oz. Boil a little, add clove oil ½sc, camphor 1sc, saffron ½sc, a little white wax. Make a liniment

/47/ Then, as she was troubled with giddiness, having stopped the other tablets gradually, I decided she should use these:
℞: simple diacidonium powder, nutmeg each 1dr, eyebright leaves, marjoram, lavender flowers each 1sc, red coral 2sc, ivory shavings
rubri sc.ii, rasurae eboris sc.i, sacchari dissoluti in aqua rosarum.

Fiat tabulae. Capiat mane postea iusculum ut sumeret, suasi, cum
maiorana et macere conditum vel ovum sorbile, addito carvi semine,
cum sale (vel potius cum sale cochleariae) sumeret.¹⁰⁷

Sanguisugis haemorrhoidis applicatis, morphea facies foedata, pro qua exterpanda sequenti usa:
℞: saponis albi unc.ii, sulphuris vivi unc.i, viridis aeris dr.i,
camphore sc.i. Cum oleo tartari fiant globuli. Madefiat parum in
aceto et inungat faciem et per se siccare sinet. Postea matutina
lacte abluat et sic brevi liberabitur. Centies probatum. Pro oculo
lachrymante utetur aqua nostra ophthalmica ut pro generosa
Smith, folio /5/.

Emplastrum pro temporibus restrictivum ordinavi, pro sistendo
rheumate:
℞: boli Armeni dr.ii, masticis dr.s, sanguinis draconis dr.i, pulveris
gallarum dr.s. Excipiantur ovi albumine et aceto. Applicetur utrinque
temporibus.¹⁰⁸

His pristinae sanitati restituta.

[Case 48] /48/ Dilachrymationis oculi dextri, per
annum destillantis cura.

euphrasiae, maioranae, fl. lavendulae ana sc.i, coralli rubri sc.ii, ras. eboris
sc.i, sacchari dis. in aqua ros. fiant tabulae. Iusculum mane ut sumeret, suasi,
cum maiorana et macere conditum velut ut ovum sorbile, addito carvi semine,
cum sale. sumeret. | ¹⁰⁸Platter, Observationum [...] libri tres, p. 351:
Emplastrum pro temporibus ordinavi. ℞: boli Arm. dr.ii, mastiches dr.s,
sanguinis draconis dr.i, pul. gallarum dr.s. excipiantur ovi albumum et aceto.
Applicetur utrinque temporibus.
1sc, sugar dissolved in rose water. Make tablets. I advised her that it should be taken in the morning after broth, seasoned with marjoram and mace, or she should take it with a soft-boiled egg with added caraway seeds and salt (or better, scurvy-grass salt).

After leeches were applied to the haemorrhoidal veins she used the following to eradicate the morphew disfiguring her face:
℞: white soap 2oz, live sulphur 1oz, verdigris 1dr, camphor 1sc.
Make pellets with oil of tartar. Moisten a little with vinegar, anoint the face, allow to dry. Wash off with milk the next morning: and so she will quickly be freed. This has been proved a hundred times.

For watering eyes, take the ophthalmic water as for Mrs Smith, page /5/.

I prescribed the plaster against rupture for the temples, to control the rheum:
℞: bole Armeniac 2dr, mastic ½dr, dragon’s blood 1dr, gall powder ½dr, with egg white and vinegar as an excipient. Apply to the temples on both sides.

These restored her to her former health.

[Case 48] /48/ Cure of excessive lachrymation of the right eye, dripping for a year.
Generosa Simons de Whightlady Asten, patiebatur in dextro oculo aquam destillatam absque dolore et rubore, propter quam malam invisus intercipi caepit, et diminutissime videt. Generosa haec fuit annorum 15, a me huiusmodi ad propulsandam dictam aquam curandi methodus instituebatur felici omine.\footnote{Ruland the Elder, 'Centuria VI', Curationum [...] centuriae, p. 443: a me huiusmodi ad propulsanda dicta vitia curandi methodus instituebatur felici omine.} 

℞: fumariae recentis, sennae purgatae an. dr.iii. Decoquendo in sero lactis pro uno haustu, saepe repetendo; que duo visioni appropriata sunt. Deinde purgata pilulis sine quibus.\footnote{Platter, Observationum [...] libri tres, p. 355: Sumendo fumariae recentem, et sennae purgatae an. unc.s, decoquendo in sero lactis, pro uno haustu saepe repetendo; que duo visioni appropriata sunt. Pilulae quoque sine quibus dictae, idem possunt effecer.} 

Collo emplastrum vesicatorium Horstei applicabam:

℞ cantharidum unc. s, terebinthinae unc.ii. olibani, myrrhae, masticis, camphorae ana dr.s, olei rosarum, cerae ana quantum satis. Fiat emplastrum. Huius usum felicissimum [...] diu observavi.\footnote{Horst, Observationum [...] libri quatuor, p. 295: Emplast. Vesciator. de Cantharidibus: ℞ cantharidum unc.i, terebinth. unc.s, olibani, myrrha, mastich. camphorae ana dr.i, ol. rosar. cerae ana q.s. F. empl. Huius usum felicissimum [...] observavi.}

Supra oculum affectum, iussi in tempore uno emplastro contra rupturam ad inhibendum influxum continuo gestare, vel loco eius, emplastrum ut folio 47 pro Generosa Wagstafe.\footnote{Platter, Observationum [...] libri tres, p. 352.}

In collyrio hoc, duas spongiolas intingat easque noctu expressas oculo applicet, ligando cum fascia aut retinendo cum cucupha donec exciccentur, tunc enim etsi decidant nil obest, modo per duas horas in oculo clauso prius haeserint. Paratur hoc modo efficacissimum et probatum.

℞: corticis granatorum unc.i, coquatur in aqua rosarum, plantaginis, solani ana unc.iii. Coletur. Dissolvatur lapidis
Mrs Simonds, a gentlewoman of Whitelady-Aston: suffered from water running from the right eye without pain or redness. Because of the troublesome weeping, her vision is cut off and she sees very little. She was 15 years old. *By a happy omen I established this method of cure in order to drive off the said water.*

℞: fresh fumitory, cleaned senna each 3dr. Boil in milk whey for one draught, repeating often, two are appropriate for vision. Then she purged with pills sine quibus.

*I applied Horst’s vesicatory plaster to the neck:*

℞: cantharides ½oz, turpentine 2oz, olibanum, myrrh, mastic, camphor each ½dr, rose oil, wax each sufficient. Make a plaster. I have observed the most happy use of this for a long time.

Above the affected eye, I prescribed the plaster against ruptures worn continuously on the temples to restrain the flux or, in its place, the plaster for Mrs Wagstaffe on page /47/.

Dip two sponges in this eye-salve, and at night apply squeezed out to the eye, fastened with a bandage or retained by a head-dress until they are dry, for then it is not a problem if they fall off. Attach them over the closed eye in the preceding way for two hours.

Prepared in this way, this is very effective and proven:

/49/ ℞: pomegranate rind 1oz, boil in rose, plantain and nightshade

---

4 She was 15 years old] S.O.: was cured by me for fifteen years. 9 I applied Horsts vesicatory plaster to the neck] S.O. adds: which I have long used with most happy success (the prescript of which you have in the Marrow of Chirurgery); [A neat bit of self-advertisement by Cooke]. 18 Attach…hours] S.O. omits.
haematitis dr.ii, agitetur donec rubeat totum collyrium, abiecta deinde foce. Adde myrrhae dr.s, sarcocollae nutritae in lacte dr.i, cerusae, tutiae ana dr.i, vitrioli albi, amyli ana sc.i. Pulverizentur omnia ut alchool. Misceantur cum collyrio. Item parentur mucilagines seminum lini et foenugraeci et quando uti velit collyrio, parum harum mucilaginim collyrio permisceat, vel in harum penuria albumen ovi.\textsuperscript{113}

His curata.

[Case 49] Fluxu menstruum rubeorum cura.

Julian West, 53 annos complente atque multis incassum pharmacis usa, vero documento comprobata.

Purgatio:

℞: foliorum senaeunc.i, trochischorum de agarico dr.iii, sacchari dr.vi, zingiberis dr.i, passularum dr.ii. Decoquantur lento igne in lactis seri lib.4, usque ad consumptionem lib.s. Huius decocti unc.i.s capiebat mane et vesperi per iii continuos dies, quo corpus probe ab humoribus expurgatum.\textsuperscript{114}

\textsuperscript{10}West 53] West 40 53 [40 probably copied accidentally from Hall’s source - see footnote].
waters each 3oz. Strain. Dissolve haematite 3dr, shake until the whole eye-salve becomes red, then discard the dregs. Add myrrh ½dr, sarcocol washed in milk 1dr, ceruse, tutty each 1dr, white vitriol, starch each 1sc. Powder everything for a very fine powder. Mix with eye-salve. Also prepare linseed and fenugreek mucilage, and when the eye-salve is wanted, mix in a little of this mucilage or if not available, egg white.

These cured her.

[Case 49] Cure of red menstrual flux.

Julian West: lasting 53 years, and the use many medicines without effect. She confirms this with certain proof.

A purgative:

℞: senna leaves 1oz, agaric trochees 3dr, sugar 6dr, ginger 1dr, raisins 2dr. Reduce at a low fire in milk whey 4 pints, until ½ pint is gone. She took 1½oz of the decoction morning and evening for three successive days, by which her body was properly purged of the humours.

---

℞: croci Martis in vino rubro dr.i.s. Hora ab assumptione capiat frictulam sic compositam:

℞: vitellum ovi, cum modico olei communis, et misce cum istis herbis, videlicet matricaria, florum omnium mensium, herbae Sancti Ioannis, millefolii et chelidoniae et fac frictulam unam quotidie et capiat unam et sic usque ad 9 dies. Hora cubitus ex creta et albumine ovi emplastrum pro dorso.

His liberata.

[Case 50] /50/ Tussis inveteratae, auditus gravitatis cura.

Generosa Sheldon de Bell-ende, aetatis 55, tussi gravi misere deturbata. Purgata sic:

℞: pilularum de succino dr.s, aurearum sc.i, sine quibus sc.i. Fiant pilulae 5, iii hora cubitus, mane ii. Postridie exhibendus pulvis sequens, a sc.s ad dr.i, per singulos dies, mane ac vespere, [...] cum vino albo, iusculo aut grato aliqua liquore.

Pulvis purgatorius talis:

℞: cardui benedicti, synapisi sylvestris ana sc.ii, piperis longi sc.i, foliorum senae selectorum dr.ii, anisi dr.s, diagridii praeparati sc.s.

---

2 Martis | ♂.
On the fourth day:

℞: crocus Martis in red wine 1½dr. An hour after taking it, take a fritter made like this:

℞: egg yolk with little ordinary oil, and mix with these herbs, viz:

5 motherwort, flowers of all seasons, St John's wort, yarrow and celandine, and make one fritter daily. Take one, repeat for 9 days.

At bedtime, a plaster of chalk and egg white for the back.

These freed her.

---

[Case 50] //50// Cure of long-standing cough, impaired hearing.

Mrs Sheldon, a gentlewoman of Bell-End aged 55: wretchedly struck down by severe cough. She was purged thus:

℞: Pills - amber ½dr, aureae 1sc, sine quibus 1sc. Make 5 pills: 3 at bedtime, 2 in the morning. Next day give the following powder, 1sc to 1dr morning and evening for one day, with white wine, broth or other acceptable fluid.

A purgative powder of this sort:

℞: blessed thistle, charlock each 2sc, long pepper 1sc, selected senna leaves 2dr, anise ½dr, prepared diagrydium 1sc. Make a very fine

---

5 flowers of all seasons] Calendula, or pot marigold. 8 These freed her] S.O. has several of Cooke's own treatments here. 10 Case 50] S.O.: Observ LI [First Century], pp. 47-48. [S.O. inserts a later case here, hence the jump in numbering].
Fiat pulvis subtilissimus, et sic per iii dies. Tussi admodum urgente, trochiscis ut uteretur sequentibus uno in ore inter dentes et buccas retento, donec sponte diffuerit, quod noctu commodius inter dormiendum fieri posse docui.

Finita pulvere:
℞: diatragacanthi frigidi dr.i.s, seminum hyoscyami albi sc.i, sacchari penidii unc.i, opii dissoluti in vino generoso gr.vi. Cum infusione gummi traganchani factura in aqua rosarum, fiant trochisci. His penitus a tussi liberata.

Pro gravitate auditus, suffitum mane auribus, suscepit per infundibulum, ex decocto origani, rutae, maioranae, spicae celticae, baccarum lauri, iuniperi, seminum foeniculi, carvi, cymini in vino decoctis. Postea indatur lana cum moscho in aure nocte. Vero allium /51/ perforatum et per totum diem in melle maceratum auribus indidit.

Die in nares succum anagallidis et betae trahere iubebam, nam valde convent nihil enim aequi ab auribus derivat atque fluxus narium:
℞: succi anagallidis, (id est pimpernell), radicis betae an. unc.s.

Misce. Trahat naribus vel penna inticta in eo naribus indatur.

Atque hisce paucis perplures pristinae integraeque sanitati, Deo

---

powder. Continue for 3 days. When the cough threatens severely, the following trochees may be used. Hold one in the mouth between the teeth and cheek while it dissolves by itself. I showed her how to do this at night, while sleeping comfortably.

When the powder is finished:

℞: cold diatragacanth 1½dr, white henbane seeds 1sc, barley sugar 1oz, opium dissolved in good wine 6gr. Make trochees with an infusion of gum tragacanth in rose water. This freed her completely from the cough.

For impaired hearing, a fumigation for the ears was received through a funnel in the morning, with a decoction of origanum, rue, marjoram, valerian, bayberries, juniper, seeds of fennel, caraway, cumin boiled in wine. Afterwards, place wool with musk in the ear at night. In fact, insert garlic /51/ perforated and soaked in honey all day into the ears.

I prescribed scarlet pimpernel and beet juice sniffed into the nostrils during the day, for it is altogether appropriate, nothing indeed is its equal. It draws off the flux from the ears, and the nose:

℞: juice of pimpernel, beetroot each 1oz. Mix. Sniff this into the nostrils, or introduce with a feather dipped in it.

I restored her with these very few and with God’s help, to her
iuwante restitut.\textsuperscript{120}

[Case 51] Abortus frequentis cura,
2 mense.

[Case 51] Cure of frequent miscarriage at two months.

Mrs Sheldon, a gentlewoman, the son’s wife, stout, well coloured: Every time she suspects she has conceived, she has miscarried after about a month had passed. In the aborted matter there sometimes appeared clear evidence of a foetus. She suffers nothing more serious in association, remaining well and fat. She asks my advice.

She said her periods flowed appropriately. Then I told her that conception was not certain. It was therefore desirable that she be cleansed and strengthened at the time of conception, so that she would be fit to conceive. She is to take sage in her drink and food.

Take a little of the following powder in a soft-boiled egg:

℞: pomegranate tincture, daisies, tormentils each 1dr, mastic ½dr.

Mix. Make a powder. Give in an egg as much as can be taken up on a groat.11

An excellent plaster for retaining a foetus:

℞: pure labdanum 1½oz, galls, moss from an oak, bole Armeniac, cypress nuts /52/ sealed earth, myrtle, red roses, dragon’s blood, wild pomegranate flower each 1½oz, naval pitch 2oz, turpentine 6oz. Mix everything together. Make a plaster, spread one part of it on leather and apply to the lower back and sacral bone. Apply the

Hoc unico remedio liberatus et curatus.

[Case 54] Mensium obstructionis, capitis doloris
et cordis cura.
Paulmer de Auster, his symptomatibus gravata, et sequenti liberata:
℞: syrups de 5 radicibus unc.i, rhabbarī pulverizati sc.i,
diacathiconis dr.vi, mannae unc.s, aquae artemisiae unc.4: sedes
8. Vene pedis sectio.
Postea capiat:
℞: trochischorum de myrrha sc.ii, cinamomi, castorei ana sc.i,
syrupi artemisiae, vini albi ana unc.ii. Fiat haustus.

Praestantissimus ad solicitandum mensium fluorem, saepe
expertum.

[Case 55] Mensium floris superflui curatio.
Generosa Barnes de Tolton, nimio menstruum rubrum fluxu post
partum transacta mense. Hoc unico medicamento curata:
℞: rasurae cornu cervi dr.s in potu mane, et sic per 4 dies.

\textsuperscript{128}Platter, Observationum[...] libri tres. p. 138.
Edward Rawlins, about 1½ years of age: weighed down by a hard swelling of the testicle, the size of a hen’s egg.

℞: powdered linseed and make a poultice with linseed oil. Apply hot, then a piece of linen cloth folded double and pressed firmly.

This one remedy freed and cured him.

[Case 54] Cure of menstrual obstruction, pain in the head and heart.

Palmer of Alcester: weighed down by these symptoms, and freed as follows:

℞: syrup of the five roots 1oz, powdered rhubarb 1sc, diacatholicon 6dr, manna ½oz, mugwort water 4oz. Eight stools. Venesection of the foot.

Then take:

℞: trochees of myrrh 2sc, cinnamon, castor each 1sc, mugwort syrup, white wine each 2oz. Make a draught.

This is outstanding for promoting menstrual flux. It has often been well tested.

[Case 55] Cure of excessive menstrual flow.

Mrs Barnes, a gentlewoman of Tolton: with excessive red menstrual flow a month after giving birth. She was cured by this medicine alone:

℞: hartshorn shavings ½dr with a drink in the morning. Continue
Statim levamen sentiebat et penitus restaurata et curata.

[Case 56] /54/ Vermium et febris cura.

5 Talbot, filius primogenitus Comitissae de Salsburrey, febre et vermibus misere lancinatus, ita ut mortem prae foribus expectant, circa aetatis annum primum.

    Laus Deo spacio trium dierum convaluit. Comitissa ingentes mihi reddebat gratias cum magno salario.

[Case 57] Vomitus cibi, febris cura.

Generosa Sheldon de Grafton aetatis 24, symptomatibus his misere gravata: diebus 14 post partum, suffocatione saepe matricis et sudore frigido oppressa.

℞: hypossetalam ex rasuris cornu cervi et floribus calendulae.

Detur pro matricis motu album album e gallinae, stercore scilicet, sc.ii, tincturae coralli sc.ii.s, aquae buglossi unc.4, et saepe in die huius coch.i, istius coch.ii. Applicetur emplastrum ex caranna /55/ umbilico, in cuius medio imponentur 3 grana moschi.

5 Talbot] Originally in heading.
the course for four days.

She immediately felt relieved, completely restored and cured.

[Case 56] Cure of worms and fever.

Talbot, first-born son of the Countess of Salisbury: wretchedly attacked by fever and worms, so that everyone expects death at the door. About the first year of age.

An enema of milk and sugar: He passed two stools, four worms. I gave prepared hartshorn orally in the form of a julep. I applied populeon ointment 2dr to the pulses, many spiders’ webs, a little hazelnut shells. Mix. I applied it to the pulses in one arm, the following day the other. I applied Mithridate to the stomach, a plaster against worms to the umbilicus.

He recovered, praise God, within three days. The Countess thanked me greatly, with a large payment.

[Case 57] Cure of vomiting food, fever.

Mrs Sheldon, a gentlewoman of Grafton aged 24: wretchedly weighed down with these symptoms fourteen days after birth. She was overcome by frequent suffocation of the womb and cold sweats.

℞: posset ale of hartshorn shavings and marigold flowers. For the mother she was given the white movement of a chicken (that is, the dung) 2sc, coral tincture 2½sc, bugloss water 4oz: 1 spoonful of the first, 2 spoonfuls of the latter often during the day. Apply a caranna plaster /55/ to the umbilicus, in the middle of which is placed 3

Scutum stomachale:
℞: labdani dr.i, cerae dr.ii, caryophylli, santali citrini ana sc.i, masticis dr.i, myrrhae dr.s. Cum oleo absinthii et macis fiat emplastrum.

His curata.

[Case 58] Flatus stomachi cura.
Generosa Davis de Quenton, diu flatu stomachi lancinata, circa aetatis annum 63.
℞: speciei aromatici rosarum Gabrielis dr.ii, radicis enulae campanae dr.iii, calami aromatici dr.ii, liquiritiae unc.s, turbith praeparati unc.s, senae unc.ii, seminum anisi unc.s, cinamomi dr.ii, radicis gentianae dr.i.s, sacchari quantum satis. Fiat pulvis.
Dosis quantum super 12 denariis tenere potest, in vino.
Hoc unico medicamento liberata.

[Case 59] Tussis gravis cura, post variolas.
Filius generosi Bishopes aetatis vi, variolis tuto liberatis per mensem, incidebat in tusse gravem, febrem cum vermibus.
℞: mannae sc.ii, diacatholiconis dr.s, floris cassiae dr.i. Misce cum syrupo de liquiritia. Detur lambendum saepe. Cornu cervi praeparatum detur in lacte, inungat pectus unguento pectorale, zulapium nostrum ex papavere, glister ex lacte et saccharo.

\[130\]Vittori, De aegritudinibus infantium, p. 115: ℞ mannae electae sc.ii, diacatholiconis dr.s, floris cassiae dr.i. Misce cum syrupo de liquiritia, fiat mistura. Detur lambendum saepius. | \[131\]Vittori, De aegritudinibus infantium, p. 114: Ungatur pectus unguento pectorali commun.
grains of musk.

A stomach shield:

℞: labdanum 1dr, wax 2dr, cloves, yellow sandalwood each 1sc, mastic 1dr, myrrh ½dr. Make a plaster with wormwood and mace oils.

These cured her.

[Case 58] Cure of wind in the stomach.

Mrs Davies, a gentlewoman of Quinton: attacked by wind in the stomach for a long time. Age: about 63 years.

℞: Gabrieli's aromatic rose powder 2dr, elecampane root 3dr, sweet flag 2dr, liquorice ½oz, prepared turbith ½oz, senna 2oz, anise seeds ½oz, cinnamon 2dr, gentian root 1½oz, sufficient sugar.

Make a powder. Dose: as much as can be held on twelve pennies, in wine.¹²

She was freed by this medicine alone.

[Case 59] Cure of severe cough after smallpox.

The son of Mr Bishop, a gentleman, aged 6: a month after being entirely freed from smallpox, fell into a severe cough and fever with worms.

℞: manna 2sc, diacatholicon ½dr, cassia flowers 1dr. Mix with liquorice syrup. Give it to be licked often. Give prepared hartshorn in milk. Anoint the chest with chest ointment; our julep of poppies; an enema of milk and sugar.

---

¹²By experiment, approximately 6 grams, equal to 4 scruples and 12 grains.

Cito curatus.

[Case 60] /56/ Lumbaginis, menstruorum alborum cura.

Generosa Harvey, nunc Domina, casta, pia, religiosa, quinque septimanis a partu, dorsi dolore et menstruorum alborum fluxu nimio divexata et debilitata.

℞: dactylorum bonorum et minutim incisorum quod vis, et cum melle despumato fiat electuarium et utere mane.

Hoc unico remedio curata, et a dolore liberata quod saepe inveni menstrua alba sistere, et impinguare facit et aufert dolorem dorsi.

[Case 61] Flatus stomachi, menstruorum rubeorum fluxus nimii cura.

Generosa Randolphe, circa aetatis annum 27, menstruorum rubeorum fluxu nimia discolorata, cum tormine stomachi post pastum.

Dorso applicetur emplastrum:

℞: boli Armeni, Cretae ana, cum albuminibus ovorum fiat emplastrum. Pro fluxu refrænando capiat ad pondus denarii unius aluminis de pluma cum vino stiptico. Utetur pulvere ut pro Cooper, folio 44.

His spacio 4 dierum curata.

---

132Solenander, Consiliorum [... Solenandri, p. 331: Electuarium bonum ad menstruis alba, et impinguare facit, et aufert dolorem dorsi. ℞ quantum vis dactylorum bonorum, et minutim incisorum, et cum melle despumato fiat electuarium, et utere mane [Hall reversed the order of the sentences].

19 ana] No quantities specified.
He was quickly cured.

[Case 60] /56/ Cure of lower backache and white vaginal flux.

Mrs Harvey, a gentlewoman, now Lady, modest, devoutly pious: troubled and weakened by backache and excessive white menstrual flux, five weeks after giving birth.

℞: good dates sliced small as you wish. Make an electuary with skimmed honey, use in the morning.

This one remedy cured her and freed her from the pain. I have often found it to stop the white discharge, add on weight, and remove backache.

[Case 61] Cure of wind in the stomach, excessive red menstrual flux.

Mrs Randolph, a gentlewoman about 27 years old: discoloured by excessive red menstrual flux with torment in the stomach after food.

Apply a plaster to the back:

℞: bole Armeniac, chalk, each. Make a plaster with egg whites. To curb the flux, take one penny-weight of rock alum with a sharp wine.¹³ Use the powder as for Cooper, page /44/.

These cured her, within four days.

¹³A penny weighed approximately 0.5 grams, or just under 8 grains.

cloth smeared with butter.

*I alleviated the severe, troublesome headache with this ointment:*

℞: alabaster ointment ½oz, opium 7gr. After this was applied and rubbed to the temple, she recovered her former health and was freed from danger of imminent miscarriage.

To God be praise, honour and glory, for ever and ever. She was cured within seven days. This has been proved.

[Case 63] Cure of nosebleed.

Roberts, a tailor of Stratford upon Avon aged about 34 years: *falls into an immoderate nosebleed, more copiously for four hours, then diminishing.*

*Being called to him, I restrained the blood /58/ as follows:*

℞: a new piece of cloth often soaked in frog spawn in March, and dried in the sun. I made plugs with this and inserted them in the nostrils (*I squeezed tightly with the other fingers, not the little and ring finger*).

Afterwards:

℞: clay, burnt and powdered 2 handfu[ls, sharp vinegar 1½ pints.

Mix together in the form of a plaster or poultice placed in a folded

---

[Case 64] 1617. Dentium doloris et gingivarum tumoris cura.

Baron Compton, nunc Comes Northamptonensis, circa aetatis annum 55, conquaerebatur de maestissimo dolore dentium, et gingivarum tumore molestissimo, quos avertebam ab eo his paucis pharmacis:

℞: succini, masticis ana dr.ii, aloes dr.v, agarici dr.ii, aristolochiae rotundae verae dr.s. Cum syrupo betonicae fiant pilulae, ex dr.i fiant pilulae N.4. Capiat dr.i mane et hora cubitus alteram. Belle purgatus et sic per iii dies.

Gargarismus:

℞: diamoronis simplicis, mellis rosatum ana unc.ii, aquae rosarum unc.4, decoctionum corticis guaiaci et hordei ana unc.4. Olei vitrioli quantum satis diluantur ut acida reddantur, saepe in die in ista spongia madefacta, gingivis dolentibus applicetur et ibi manet toto die.

His remediis ab his symptomatibus penitus liberatus et 2a die cibum manducare potuit et 3a die perfecte, laus Deo curatus.

---

Misceantur omnia, et cum syrupo de absinthio, vel de succo betonic. conficianturque pillulae vii ex dr.i.

4 | in margin.
cloth. I applied it frequently, very cold, to the forehead, neck and temples. The flow ceased, and ended in less than half an hour.

[Case 64] 1617. Cure of toothache and swelling of the gums.

Baron Compton, now first Earl of Northampton, about 55 years of age: the victim of a most unhappy toothache with very troublesome swelling of the gums, which I took away with these few medicines:

℞: amber, mastic each 2dr, aloes 5dr, agaric 2dr, true round-leaved birthwort ½dr. Make pills with betony syrup, 4 pills from 1dr. Take 1dr in the morning and another at bedtime. He was agreeably purged. Continue so for three days.

A gargle:

℞: mulberry syrup, rose honey each 2oz, rose water 4oz, guaiacum root and barley decoctions each 4oz. Dilute with sufficient oil of vitriol to give acidity. Apply a sponge dipped in it to the painful gums often during the day, and hold it there /59/ the whole day.

These remedies freed him completely from the symptoms. On the second day he could chew food, and by the third he was perfectly cured, praise God.

---

[Case 65] Capitis doloris, pruritus universalis cum exanthematibus cura.

Anna Greene generosa, filiola primogenita causidici Greene, cum annum aetatis completit duodecimum primum. Dolore capitis corripitur, vivido colore totius corporis pereunte et huic albo succedente, affligitur simul pruritu corporis universalii cum exanthematibus dolorificis ut nisi summo dolore ambulare potuit.\textsuperscript{145}

Cura:

℞: sarsaparillae unc.ii, hermodactylis unc.i.s, guaiaci, liquiritiae ana unc.i, polipodii quercini, senae ana unc.ii, agarici dr.ii, radicum foeniculi, petroselini ana unc.i, herbarum betonicae, salviae ana M.s, rosmarini p.i, seminum anisi, carvi, coriandri ana unc.s, cinamomi dr.i. Bulliant in 8 libras aquae, ad consumptionem medietatis. Accipiebat unc.ii.s, syrupi rosacei solutivi unc.i, oleo vitrioli quantum satis ut acida reddatur: 5 sedes, et sic successive 5 dierum spacio.

Corpore bene purgato, decoctionem chynae in hunc modum dabam: radicem chynae tenuissime incidere oportet, huius recipe dr.iii. Fiat maceratio in lib.iii aquae fontane per 24 horas.

Transactis horis fiat decoctio igne lento, donec remaniet lib.i.s, et tunc coletur et reponatur. Capiat haustum mane horis 5 ante prandium et tribus horis ante cenam. Calide potantur. Omni 3\textsuperscript{a} die /60/ purganda.

Post usum decoctionis sudorifici praescripti, sequenti balneo usa:

[Case 65] Cure of headache, itching all over, with a pustular rash.

Anne Greene, a gentlewoman, first daughter of Lawyer Greene, has completed the first twelve years of her life. She is seized by a headache, with vivid colours all over the body, dying away and succeeded by pallor. She is vexed at the same time by itching of the whole body with a painful rash, so that at the height of the pain she could not walk.

The cure:

℞: sarsaparilla 2oz, colchicum 1½oz, guaiacum, liquorice each 1oz, polypody of the oak, senna each 2oz, agaric, 2dr, fennel, parsley roots 1oz, betony, sage leaves each ½ handful, rosemary 1 pinch, anise, caraway, coriander seeds each ½oz, cinnamon 1dr. Boil in 8 pints water, reduce by half. Take 2½oz, with loosening rose syrup 1oz, sufficient oil of vitriol to give acidity. Five stools. Continue the course for five successive days.

When the body was well purged, I gave a china decoction of this sort: china root sliced finely, take 3dr of it, soak in 3 pints spring water for twenty four hours. After that time, make a decoction on a slow fire until 1½ pints remain, then strain and store. Take a draught in the morning, five hours before lunch and three hours before dinner. It should be drunk hot. She should be purged every third day. /60/

After using the prescribed sweating decoction, she used the following bath:

---

℞: foliorum querci M.xx, foeniculi M.xv, radicem bryoniae, enulae campanae incisae ana M.4, sulphuris, aluminis, salis marini ana lib.i. Bulliant in satis quantum aquae pro balneo. E balneo egressa in lecto sudare iubebam, et post inungi corpus unguento ex radice enulae, bryoniae, aluminis, confecto cum butyri Maiali.

His pulchra et glabra facta fuit.

[Case 66] Urinae retentionis cura.

John Smith aetatis 60 de Nunam, urinae retentioni misere afflictus per iii dies, *ab calculo in urinae suppressionem omnimodam incidit*, cum vitae periculo. *Pro isto levando multa absque nullo fructu tentanda, tandem meum petens consilium.*

> *Medicas salutiferas eiusmodi adhibeo.*

*Potus caepas et alea incisa butyro atque aceto frixa calida superponere ad pectinem et inter anum et scrotum iubebam.*

*His ita administratis, urina profluere caepit intra /61/ horae spacium cum nonnullis calculis et arenis atque sic a flebili, diuturno ac perniciiali et imminenti periculo liber evasit per Dei gratiam.*

---

147Ruland the Elder, ‘Centuria VIII’, *Curationum [...] centuriae*, p. 564: *vino, quod bibebat, imponebam grana alkakengi contusa [...] caepas et allia incisa, butyroque ac aceto frixa calida superimposui ad pectinem et inter anum et scrotum. His itaque simul adhibitis post Dei devotam invocationem urina intra horae spatium copiose, nimirum ad multas libras profluere coepit cum nonnullis calculis et arenis. Atque sic generosus et ab alis medicis desperatus baro a flebili, diuturno ac perniciiali isto morbo liber evasit*
℞: oak leaves 20 handfuls, fennel 15 handfuls, sliced bryony, elecampane roots each 4 handfuls, sulphur, alum, salt each 1 lb. Boil in sufficient water for a bath. On leaving the bath I ordered her to sweat in bed, and afterwards to anoint the body with an ointment of elecampane root, bryony, alum, mixed with May butter.

These restored her looks, and made her [skin] smooth.

[Case 66] Cure of urinary retention.

John Smith aged 60, of Newnham: wretchedly afflicted by urinary retention for three days. He fell into complete suppression of urine on account of a stone, in danger of his life. Though much was tried, nothing worked to relieve it. I was finally asked for advice.

I use healing medications in this way:
℞: winter cherries 6, parsley seeds 3 dr. Boil in sufficient milk and make posset ale. ℞: 6 oz of this, Fernel’s marsh mallow syrup 1 oz, Holland powder 2 dr. Make a draught. He drank white wine in which bruised winter cherry pips had been soaked. I prescribed an onion and sliced garlic fried in butter and vinegar to be placed hot on the pubic region and between the anus and scrotum. By these ministrations, urine began to flow \(\text{61}\) within an hour, with some stones and gravel. And so he escaped free from lamentable, long-lasting, calamitous and imminent danger, through God’s grace.

---

[Case 67] Ventriculi doloris, lumbaginis, icteritiae citrinae curatio.

John Nason, Barbitonsor, opidanus 40 annos natus, semper a sumpto cibo acerbissimos ventriculi dolores patiebatur. Lumbagine misere cruciatus, ita ut noctes fere omnes insomnes transigebat, icteritiaque flava tinctus, urina rubra tenuis, corona flava et spumosa.

℞: poculi chymici unc.i: vomitus vi, sedes iii.

Die sequenti:

℞: marrubii unc.ii, lupulorum unc.i, radicis buglossae, radicis enulae, radicis eupatorii ana dr.s, rhubarbari grosso modo incisi dr.i, ligni aloses dr.i.s. Bulliant omnia in lib.iii vini albi potentis usque ad consumptionem tertiae partis, deinde coletur sine expressione. Colaturae adde succi stercoris anserini lib.s. Fiat. ℞ huius decoctionis unc.iii, sacchari albi dr.ii. Misce. Fiat potus, qui exhibeatur quotidie mane in diluculo.148

Et sic paucis dierum spacio curatus et bene coloratus.

[Case 68] Urinae ardoris cura.

Baron Compton, circa aetatis annum 55, infeste cruciebatur urinae /62/ ardore. Liberatus et sanus evasit per sequentem aquam, in hac aegritudine saepe a me probatam:

℞: albuminum ovorum bene conquassatorum N.8, lactis vaccini

perniciiali isto morbo liber evasit per Dei gratiam.

148Vettori, Exhortatio, p. 134: Recip. marrubii unc.ii lupulorum unc.i, radicum enulae, radicum eupatorii ana drach.s reubarbari grosso modo incisi drach.i ligni aloses drach.i.s. bulliant omnia in lib.iii vini albi potentis, et odoriferi, usque ad consumptionem tertiae partis, deinde coletur sine expressione, et de praedicto vino recipe unc.ii.s sacchari albissimi drach.ii. Misce et fiat potus, qui exhibeatur patienti quolibet mane in diluculo.

6 flava] flua.
[Case 67] Cure of stomach and lower back pain, yellow jaundice.

John Nason, a barber of Stratford upon Avon, 40 years old:¹⁴

suffering constantly from most grievous pains in the belly after food.

He was wretchedly tortured by lower back-ache, so that he remained awake almost all night. Also yellow-tinted jaundice, urine: thin, red, the surface yellow and frothy.

℞: the chymical cup 1oz: six vomits, four stools.

Next day:

℞: horehound 2oz, hops 1oz, bugloss root, elecampane root, gravel-root each ½dr, rhubarb sliced coarsely 1dr, aloes wood 1½dr. Boil everything in 3 pints strong white wine until reduced by a third, then strain without squeezing. Add juice of goose droppings ½ pint to the strained liquid. Make it. ℞: 3oz of this decoction, white sugar 2dr.

Mix. Make a drink. Give it every day, in the morning at dawn.

And so within a few days, he was cured and well-coloured.

[Case 68] Cure of burning urine.

Baron Compton, about 55 years of age: savagely tortured /62/ by heat of the urine. He was freed and achieved health through the following water, frequently proved by me in this illness:

℞: well-beaten egg whites 8, cow’s milk 1 pint, red rose water ½

pint. Distill by the usual method in a common still. Take 4oz of the distilled water, Fernel's marsh mallow syrup 1oz. Mix. Give cold on an empty stomach.

He was properly cured and rode with King James into Scotland. Tried and proved.

[Case 69] Cure of an impediment to swallowing with swelling of the tonsils.

Mrs Boughton, a gentlewoman, mother-in-law of Mr Combe, a gentleman of Lawford, good-looking, now aged about 36, of excellent and shapely figure: harassed by the most severe illnesses and savage symptoms for two years, feeling exceedingly wretched. Although the most skilled physicians in the art were consulted nothing helped, indeed [the symptoms] grew worse and proved even more severe within days.

At first she could hardly swallow or breathe. She felt something hard, the size of a dove's egg in her throat, which allowed her to swallow no food and hardly any drink. This was caused by a wind, because she felt it moving, and as it moved it caused more or less pain. Though the swelling of the tonsils was not large, she was most troubled at night by catarrh dripping from the head. The illness and pain deprived her of sleep, and led to fear of choking.

Her head was assailed by a notable lethargy, and she was

affected by an extraordinary constant sleepiness. Her body was equally oppressed by the catarrh, which caused great difficulty in walking and deprivation of the natural actions. From these she was seized by a long series of symptoms: a creeping discolouration in the hands at intervals, not without cold, and swollen legs like a scorbutic dropsy. All this was caused by the spleen and liver and suppression of her periods.

℞: senna 2½dr, cream of tartar 2dr, best turbith, colchicum each 1dr, rhubarb, trochischated agaric each 2sc, prepared scammony ½dr, mace, cinnamon, galangals each 3dr, violet sugar equal in weight to everything. Make the powder. Dose: 1 to 2dr in broth boiled with herbs - penny-royal, mugwort, horehound, sage, betony.

Once that is finished, take a china decoction prepared in this way:

℞: china root shavings 1oz, sassaphras root 3dr, spring water 6 pints, lemon juice 2oz. Soak for twenty four hours then boil, reduce by a third, then strain through a Hippocras bag. She should drink 5oz of this morning and evening, with 2oz prepared scurvy-grass juice. On the third day, although the bowel movements were not bound, I wished an enema injected: 12oz of this decoction, red sugar 2oz, rosemary honey 3oz. Make an enema.

---

18 On the third day| S.O.: every third day.  19 although the bowel movements were not bound| S.O.: if the body was not open.
℞: aquae fontane unc.ii, olei vitrioli Romani tot guttas quot acidum multum reddant. In hac aqua intinctam pennam ad fauces tumentes immittebat aliquoties in horas singulas, cuius usu ore permulta phlegmata continuo emittebat et exspuebat. Post aquae immisionem ex praecepto meo succinum album carbonibus imposuit, et per infundibulum ore fumum excepit. 154 Omni tempore vellem ut gestare ceratum nostrum stomachicum, folio /17/.

℞: diamoronis simplicis unc.v, mellis rosati unc.4, succi matrisylvae unc.viii, aquae hordei unc.12, olei sulphuris quantum satis ut acida redantur. Saepe in die gargarisare vellem.

His recte se habuit et vixit 8 annos postea.

[Case 70] /64/ Febris ex crapula cura.

Eques Beaufou (quem semper honoris causa nomino) cena finita, magnam lactis coagulati quantitatem edebat, circa aetatis annum 70. Post primum somnum male se habuit et indies deterior. Me veniente 2a die, pulsum celerem perspiciebam, urinam emisit rubram, paucam; saepe mingebat. Stomacho phlegmate et cholera pleno, nam quiquid caepit, mox sponte evomebat choleram in magna quantitate sicut vitellum ovi putrefacti.

Hec mihi consideranti, dabam poculi chymici unc.i: vomitus 10 et ter venter ex officio respondebat. Potus decoctio cornu cervi cum saccharo et succo limonum ad gratam acotositatem.

Laus Deo rite curatus 4 dierum spacio.

---

For the mouth:

℞: spring water 2oz, sufficient Roman oil of vitriol to give intense acidity. Insert a feather dipped in this water in the swollen throat, several times an hour, from which she repeatedly brought up and spat out much phlegm. After the water, by my advice white amber was put on coals, and the smoke led to the mouth through a funnel. I wanted her to wear our stomach salve, page /17/, all the time.

℞: simple mulberry juice 5oz, rose honey 4oz, cleavers juice 8oz, barley water 12oz, sufficient oil of sulphur to give acidity. I wished her to gargle often during the day.

These made her well, and she lived for 8 years afterwards.

[Case 70] /64/ Cure of fever from over-indulgence.

Squire Beaufou (whom I always name as a sign of honour): ate a large quantity of milk curds after dinner. Age: about 70 years.

Soon after going to bed he felt ill, and worse each day. Coming on the second day, I found his pulse rapid. He passed a little red urine, urinating frequently. His stomach was full of phlegm and choler, for whatever he took, he freely brought up choler in large quantity, like the yolk of a bad egg.

Considering this, I gave him the chymical cup 1oz. Vomits ten, and the belly returned to its duty three times. To drink: hartshorn decoction with sugar and lemon juice for a pleasing tartness.

He was properly cured, praise God, within four days.

---

[Case 71] Appetitus prostrati cura.

Eques Pauckington, anorexiam patitur ad appetitum amissum. Recuperandum medicamentum facile rogabat, cui sequentem pulverem senae per plures dies propinare iubebam:

℞ foliorum senae optimae dr.iii, zingiberis, macis ana sc.i, cinamomi dr.s, tartari cremoris dr.ii. Misce. Fiat pulvis. Dosis dr.i in iusculo.

Hoc unico pulvere appetitus restitutus et mihi gratias dedit, et conficiendi modum rogabat; et anno sequenti dixit se saepe pulverem praeparatam capere exoptato eventu. Probatum.

[Case 72] Anginae, tonsillarum et columellae inflammationis cura.

Magister Rogers, clericus opidanus; circiter aetatis suae annum 40, conquaebatur de gutturis dolore, inflammataeque tonsillatae atque uvula. Aegerrime deglutivit, difficulter respiravit et fere strangulatus. Huic subito subveni sequentibus:

---

155 This is the recipe for pulvis senae Montagnanae; it matches that in the 1613 Pharmacopoeia Augustana better than that in Pharmacopoeia Londinensis.
156 Ruland the Elder, Centuria IV, Curationum [... centuriae, p. 268.
[Case 71] Cure of exhausted appetite.

Squire Packington: suffering from distaste for food and poor appetite. He requested a medicine to restore it quickly, for which I prescribed the following senna powder, to be taken for several days:

℞: best senna leaves 3dr, ginger, mace each 1sc, cinnamon ½dr, cream of tartar 2dr. Mix Make a powder. Dose: 1dr in broth.

This one powder restored his appetite. He thanked me greatly and asked how it was made. The following year he said he used the prepared powder often, with the desired result. This has been proved.

[Case 72] Cure of sore throat, inflammation of tonsils and palate.

Mr Rogers, Vicar of Stratford upon Avon, about 40 years old: the victim of pain in the throat with inflamed tonsils and uvula. He swallowed painfully, breathed with difficulty and felt almost as if choked. I rescued him quickly with the following:

℞: figs, liquorice, raisins, anise seed each 1oz, spring water 4 pints. Boil by the usual method. Make an ordinary drink. He took amber fumes often during the day.

I made this plaster to be applied to the neck and visible swelling:

15From 1606 to 1619: Lane, John Hall, p. 139.
Unius noctis spacio curatus, *et deglutiendo facultas iterum facta max fuit.* 157 Centies probatum.

[Case 73] Luis Ungaricae cura, cum variolis.

Domina Beaufou, pia, honesta, ab omnibus summo gradu honoris collocata, pro sanitate amissa recuperanda omnes ad Deum comprecantur, anno aetatis 28.

Anno Domini 1617 Iulii primo, correpta fuit febre ardenti maligna continua cum summo capitis dolore, *aestuat vehementissime, dolet ventriculo et universis membris [...] corpus maxime brachia petechiis designata.* Urina parum rubra, signa febris (ut vulgo vocant) *quae tum temporis vicatim grassatatur,* obvios quosque invadens, demonstrabant. *Vocatus /66/ 3a invasionis die et stomachum malis humoribus infarctum et onustum percipiens.* 158

Meo consilio sequentem vomitorium exauriebat:

℞: poculi chymici unc.i.dr.i, quo duodecies evomebat, sine magna molestia. Die praeterito lac multum ad sitem extinguedam hauriebat. Hoc ex suo cerebro depromptum, quod per vomitum praedictum coagulatum in magna quantitate mirum dictu eliciebat. Singulo paene vomitu imprimis paene suffocata, tanta erat moles et tam magna frustra lactis coagulati. Postea multam cholerae phlegmate permistam, deinde melancholiam adustam summo labore evomebat: quo mota est alvus sexties, phlegmatibus

157 Ruland the Elder, *Centuria IV*, *Curationum [...] centuriae*, p. 271.
He was cured within one night, and the ability to swallow was soon restored. This has been proved a hundred times.

[Case 73] Cure of the Hungarian disease, with smallpox.¹⁶

Lady Beaufou, pious, respected, held in the highest regard by everyone: Everyone was calling on God for the recovery of her lost health. Age: 28 years.

1 July 1617. She was seized by a continual malignant burning fever, with most severe headache. She is exceedingly hot, feels pain in the belly and all organs. She was marked on the body, the arms particularly, with little spots. Urine: little and red. These revealed signs of the new fever (as it was commonly called) which at that time prowled the streets and attacked everyone exposed to it. I was called on the /66/ third day of the attack, and observed the stomach stuffed full and laden with bad humours.

On my advice she downed the following emetic:
℞: the chymical cup 1oz 1dr, which gave twelve vomits without much trouble. The previous day she drank a lot of milk, to quench her thirst. This was her own idea, from which she threw up an amazing amount of coagulate in the vomit. She was almost choked by the first vomit, it was such a large amount and such complete ejection of the curdled milk. Afterwards she vomited much choler

---

¹⁶An example of the changeable nature of illnesses in this period: Lady Beaufou's illness started with a malignant fever, which after seven days changed into smallpox; see Stein, 'The Meaning of Signs', 617-648.

⁴ Case 73] S.O.: Observ. LXXVII [First Century], pp. 68-69. ⁵ smallpox replacing measles [morbilli], which Hall had deleted. ⁶ held...everyone] S.O.: being of a noble extract. ⁲⁰ This...idea] S.O.: unknown to me.
referentibus et viridibus biliosis serosisque multis mixtum profluentibus.

Vomitorio per iii horas finito, dabam pilulas laudani Paracelsi gr.vii. Hac devorata pilula, perbelle per 4 horas edormiebet, dolore capitis cessante.

Tandem me insciente, pedissequa dedit haustum seri lactis quo decepto statim iii habuit vomitus nigros sine aliqua molestia et ii sedes eiusdem coloris; et singultum misere cruciata, qui vini clareti adusti cum aromatibus haustus refrænatus. Nox ceteris longe quietior, sed non bene /67/ somnum cepissit.

Mane iusculum ex pullo cum herbis appropriatis dabam et sic per 4 horas mansit. Finito tempore dabam haustum decoctionis cornu cervi calide. Mane lunarem evacuationem habuit, vellem tamen ut decoctionem cornu cervi biberit frigide. Pustulae misere cruciabant eam, cum summo gutturis et linguæ ardore, ita ut potum nisi maxima difficultate devorare potuit.

Sequenti gargarismo usa:

℞: diamoronis simplicis unc.iii, mellis rosati unc.ii, aquae rosarum lib.s, olei sulphuris quantum satis ad acedinem, tandem post usum decoctionis cornu cervi.
mixed with phlegm, then burnt black bile, with the greatest effort.

With this there were 6 bowel movements, returning phlegm and
green bile mingled with a large quantity of watery outpourings.

Three hours after the emetic was finished, I gave Paracelsus’s
laudanum pills 7gr. After taking the pills she slept soundly, the
headache ceasing.

Then her companion gave her a drink of milk whey without my
knowing. This deception gave her three black vomits immediately,
without any trouble, and two stools of the same colour. She was
wretchedly tormented with hiccups, which were curbed by a drink
of claret wine mulled with spices. The rest of the night was more
peaceful, but she could not /67/ fall fast asleep.

In the morning I gave chicken broth with appropriate herbs,
and she rested for four hours. At the end of that time I gave a
draught of hot hartshorn decoction. She had her monthly period,
nevertheless I would have preferred her to drink the hartshorn
decoction cold. The pocks tormented her wretchedly, with the
greatest heat in the throat and tongue, so that she could swallow
the drink only with the greatest difficulty.

She used the following gargle:

℞: simple mulberry juice 3oz, rose honey 2oz, rose water ½ pint,
sufficient oil of sulphur for tartness. Then she used the cold

1 with the greatest effort] S.O. omits.  5 7gr] S.O. adds: sure he mistook her,
for four is a good dose.  15 She had her monthly period] S.O.: on Monday
morning having some evacuation.
Variatiae apperabant die septima, attamen pro gutture usa est gargarismo praedictae et 4 in die haustum decoctionis cornu cervi frigide, et sic laus Deo curata.

Variolas inungi iubebam tempore convenienti tali unguento:

℞: aquae cardui benedicti, olei communis ana. Agitentur diu.

Sine vestigio curata. *Huic deploratae dominae hisce paucis auxiliante Deo medebar*,\(^\textsuperscript{159}\)

[Case 74] Variolarum cura, smalepoxe.

Generosus Farman, vesticeps, congero dicaculus, vultuosus, facetus, variolas dolet, infectus conviscendo Domina Beaufou ita ut abire patriam suam nequitt Lestriencis.

Ad expulsionem:

℞: diascordii dr.i, mithridatii dr.s, croci sc.s, aquae dracunculae unc.iii, cornu cervi praeparati sc.i. Fiat haustus sudoriferus. /\(^\textsuperscript{68}\)/

Hoc potato haustu eadem die pullulare incipiebant. Antea
delirebat, his visis *tacitum continere gaudent non potuit*, sed sorori
dixit se ab omni mortis periculo liberum esse.\(^\textsuperscript{160}\) Maesta et modesta eius soror hilaritate profusa et effusa *tendens ad caelum palamas*,\(^\textsuperscript{161}\)

Deo gratias immortales dabat quod praeter spem ab orci faucibus

\(^{159}\)Ruland the Elder, ‘Centuria VI’, *Curationum [...] centuriae*, p. 450: *Huic deploratae, auxiliante Deo, brevi hisce paucis et εὐ̛̛̛ πορίστοις medebar.*

The smallpox appeared on the seventh day, notwithstanding which she used the above gargle for her throat and a draught of the cold hartshorn decoction four times a day, and so, praise God, was cured.

I prescribed this ointment for anointing the smallpox:
℞: blessed thistle water, common salt, each. Stir them for some time.

She was cured without scars. *I healed this desperately ill lady with these few remedies and the help of God.*

[Case 74] Cure of smallpox.

Mr Farnham, a young gentleman of the same family, talkative, affected, witty: infected with smallpox while staying with Lady Beaufou, so that he could not return to his paternal home at Leicester.

To bring out the pocks:
℞: diascordium 1dr, Mithridate ½dr, saffron ½sc, tarragon water 3oz, prepared hartshorn 1sc. Make a sweating draught. /68/ Once he had drunk this, they began to spread the same day. Previously he was senseless, but seeing this joy could not be confined and his sister reported he was freed from all danger of death. His grieving and reserved sister poured out her wide flowing joy, holding her hands to heaven she gave everlasting thanks to God, because her...
fratrem liberatum esse.

Ad sitem eius effraenandum bibat ad placitum decoctionem cornu cervi. Usus est pro gutture, gargarismo ut pro Domina Beaufou. Ne desidarent faciem sequenti oleo usus saepe in die cum siccare incipiebant.

℞: aquae cardui benedicti unc.ii, olei olivarum unc.i.s.
Conquassantur et agitentur ad formam olei.
Sine vestigiis, laus Deo curatus.

[Case 75] Febris a partu cura.

Domina Rous, religiosa, aetatis 27 de Rouse Lench: 2a die a partu in febrem quotidiam incidebat, instante paroxysmo misere vehementissimo capitis dolore lancinata, extremoque cervicis dolore cruciata.

℞: diascordii dr.s, magisterii perlarum, tincturi coralli ana gr.12, aquae cardui benedicti unc.ii. Detur horas ii ante paroxysmum, reiteretur potio veniente paroxysmo, et sic per ii dies.

A dolore cervicis emplastrum hoc:
℞: carannae unc.i. Dissolvatur in vini hyssopicis albi unc.i. Fiat emplastrum. Extendatur super alutam et cervici applicetur.

A dolore capitis liberata et a febre. Laus Deo.

[Case 76] /69/ Gonorrhoeae virulentae cura.

William Clavell de Fecknam, gonorrhoea virulenta cum summo
brother had been freed beyond all hope from the jaws of death.

To control thirst he drank hartshorn decoction as he pleased.

For his throat he used the gargle as for Lady Beaufou. To prevent disfigurement of his face, he used the following oil when the pocks started to dry:

R: blessed thistle water 2oz, olive oil 1½oz. Mix. Shake together in the form of oil.

He was cured, praise God, without scars.

[Case 75] Cure of fever after giving birth.

Lady Rous of Rouse Lench, devout, aged 27: fell into a quotidian fever two days after giving birth. She was wretchedly attacked by a most violent headache at the moment of the attack, and tortured by extreme pain in her neck.

R: diascordium ½dr, magisterium of pearls, coral tincture each 12gr, blessed thistle water 2oz. Give two hours before the attack, repeat the potion when the attack comes. Continue the course for two days.

This plaster for the sore neck:

R: caranna 1oz. Dissolve in white hyssop wine 1oz. Make a plaster. Spread it on thin leather and apply to the neck.

She was freed from the headache and fever. Praise God.

[Case 76] Cure of virulent gonorrhoea.

William Clavell of Feckenham: most wretchedly seized by virulent
urinae ardore, a 40 diebus gravissime retinebatur. Chirurgum ad mensem incassum consult, in nostris vero manibus sequentibus remediis 15 dierum spacio convaluit.

Mense Octobris:

℞: gummi guaiaci unc.i, pulverizati in cervisia: quinque sedes.

Postea:

℞: decoctionis sarsaparillae lib.4. Libram mane et sero hauriebat, sed quoniam saepe mentio de decoctione sarsaparillae facta est, his assignare vellem:

Deinde electuarii sequenti:

℞: gummi tragacanthi unc.s. Dissolvatur in satis quantum aquae plantaginis. Coletur, colaturae adde pulveris gummi guaiaci dr.ii, terebinthinae ustae dr.i. Dosis dr.i.s.

Sed usu decoctione sarsaparillae rite recteque purgatus et omnino a lumbagine et ardore urinae liberatus 4 diebus, et usu huius electuarii a gonorrhoea penitus curatus.

[Case 77] Vermium admirandorum cura.

Richard Wilmore de Norton aetatis 14, evomebat vermes nigros ad pollicis unitis et semis longitudinem, cum sexdecem pedibus,
gonorrhoea with extremely hot urine for forty days. He consulted a surgeon uselessly for a month, but did indeed recover in our hands with the following remedies, in fifteen days.

In the month of October:

℞: guaiacum gum 1oz powdered, in beer. Five stools.

Afterwards:

℞: sarsaparilla decoction 4 pints. He drank a pint morning and evening, but because he often mentioned sarsaparilla decoction, I wanted to give him these:

℞: sarsaparilla 2oz, colchicum 1½oz, guaiacum, liquorice each 1oz, senna 2oz, anise, caraway, coriander seeds each ½oz. Boil in 8 pints, reduce to four. Strain and store for use. He took 4 pints of this.

Next, the following electuary:

He was suitably and correctly purged by the use of the sarsaparilla decoction, and entirely freed from lower backache and burning urine in four days. The use of the electuary completely cured his gonorrhoea.

[Case 77] Cure of astonishing worms.

Richard Wilmore of Norton, aged 14: vomited black worms about one and a half inches long, with sixteen legs and small red heads.

---

1 He consulted a surgeon] S.O.: having been under another's hands.
8 but...decoction] S.O. omits.
12 pints of this] S.O.: four oz.
capitellis rubris. Quando evomebat paene mortui fuerant, pauco interposito tempore revivixebant. Haec ex mercurio vitae reiecta.

Die sequenti ab assumptione pater /70/ eius, charta involutos, ad me adducebat. Hic et illic erucati gressu serpebant, et eruis nisi colore similes. Eis visis, remanebat meum ultra petens consilium, quod filio faustum iudicabat.

Cum animadverterem statum morbi et virium robor et quod maxime semel in mense nimirum novo lunae conflictabatur graviter, et misere torquebatur horum lancinatione (nisi cibario se ingurgitaret et avido ore captaret cibos, nam /fames rabida/ et /improba ventris rabies/). Ita summo cruciatus oppressus ut astantes animis sauciati. /Urina excepta erat/ resplendens cum scintillis ad colorem ambrae pulverizatae, alias satis bona. Erat robustus, bene coloratus.

Duabus ab hinc annis a lue Gallica a me rite curatus, et bene se habet et a doloribus immunis. Donec incidebat in hoc pertristi dolore, /quoniam hoc vitii genus acutissimum est omnium qua insidiantur stomacho et penitus exitiale, nisi cito et recte subventum fuerit./

Ego vero misertus, huius curam institui sequentibus remediis: /℞/: mercurii vitae gr.iii, conservae rosarum parum: vomitus ii.

Evomebat vi vermes vivos, tales quales nunquam antea vidi nec legi.

Die sequenti:

---

---

2 mercurio|♀.  21 mercurii|♀.
When he vomited they were almost dead, but revived after a short time had passed. They were expelled with mercurius vitae. The day after they were brought up /70/ his father brought them to me wrapped in paper. They crawled slowly as if with earwig feet, but not the same colour as earwigs. Once we had seen these he continued to ask me for further advice because he judged it would benefit his son.

Next I observed the state of the illness and robustness of his strength, that he was most vexed once a month, that is, at the new moon, and was wretchedly wracked by their attack (unless he gorged himself with plain food, and greedily took food by mouth, because of frenzied hunger and immoderate greed of the stomach). He was so overwhelmed by the greatness of his suffering that those around him were wounded in spirit. He passed urine with shining sparks the colour of amber powder, otherwise satisfactory and good. He was strong, well coloured.

Two years previously I had cured him properly of the French disease, and he became well and freed from pain. Then he fell into this very painful condition, indeed the most severe kind of affliction, which lurks in the stomach and is deeply destructive unless quickly and correctly treated.

I did indeed feel pity, and started its cure with the following remedies:

℞: mercurius vitae 3gr, a little rose conserve: vomits two. He brought up six live worms, of a sort that I have never seen or read of

---

2 They were expelled with mercurius vitae] S.O.: I gave him Merc. Vitae; I read as a home remedy before Hall was consulted; 4 earwig] following S.O.
℞: poculi chymici dr.v: vomitus 5, vermes iii.

3a die purgatus sic:

/71/℞: speciei diaturbith cum rhabarbaro dr.i, pulveris senae laxativae dr.s, aquae portulacae unc.iii, syrupi rosacei solutivi unc.i, olei vitrioli gut.8. Misce. Rite purgatus sed nullos eiciiebat vermes, et his liber evasit, et mihi multas reddebat gratias.

Transactis duobus annis, obiter vidi, et rogabam an unquam sentiebat erosionem stomachi, vel eiciiebat vermes, et dixit ab omni dolore et torminibus ab eo tempore liberum esse. Deo laus.

[Case 78] Dentium doloris cura.

Generosa Kempson perferebat dies noctesque in dente genuino carioso, cruciatum maestum et querulum, pro quo abigendo permulta machinata est, sed absque omni profectu. Tandem ad me accurrenti, do aquam sequentem qua admota derepente dolor sedatus, sputaque multa et tenua promota.166

℞: aquae papaveris rheadis unc.ii, olei vitrioli quantum satis ut acida reddatur. Commiscendor bene, immersum linteolum supra dolentem dentem admovit saepe, et cum quater saltem hoc fecisset, subito omnis dolor remisit.167

Capite tamen dolente, pilulis sequentibus usa:

---

166 Ruland the Elder, 'Centuria IV', Curationum [...] centuriae, p. 251: perferebat dies noctesque in dente genuino carioso cruciatum moestum, odiusum et querulum: pro quo abigendo permulta machinatus est sed absque omni profectu. Tandem ad me accurrenti, do aquam antipodagricam, qua admota derepente dolor elevatus est et sedatus est, sputaque multa et tenua promota sunt.

before.

On the following day:
℞: the chymical cup 5dr: vomits five, worms three.

On the third day he was purged in this way:
℞: diaturbith powder with rhubarb 1dr, laxative senna powder \(\frac{1}{2}\)dr, purslane water 3oz, solutive syrup of roses 1oz, oil of vitriol 8 drops. Mix. He was properly purged but passed no worms. He was set free by these and gave me many thanks.

I saw him in passing two years later, and asked whether he ever felt any corrosion of the stomach or passed worms. He replied that he had been free of all pain and torment since that time.

Praise God.

[CASE 78] Cure of toothache.

Mrs Kempson, a gentlewoman: endured grim and pitiful torture from a decayed molar tooth day and night. She contrived many things as cures but with no success. When she comes running to me, I give her the following water whose rapid application calmed the pain. She brought up much thin sputum:
℞: field poppy water 2oz, sufficient oil of vitriol to render it sharp. Mix well. Place a cloth soaked in it over the sore tooth often. At last, when the fourth application had been made, all the pain suddenly left.

Her head was still hurting, so she used the following pills:

---

14 Case 78] S.O.: Observ. LXXXII [First Century], p. 73. 16 things as cures but with] S.O.: used many medicines, as also charms.
℞: pilularum cochiarum dr.s, aurearum dr.i, trochischati agarici
sc.s. Cum aqua betonicae fiant pilulae 7: sedes 10 et vomitus iii, et
4 vermes magnos et longos per se sessum deiciebat.

His solis a praedictis symptomatibus liberata.

[Case 79] /72/  Tumoris faciei cura.
Baron Compton Praesidens Walliae, tumore faciei a rheumate orto
gravissime cruciat us et defoedatus. Ad quem veniens sequentia
ordinabam praesidea:
℞: unguenti dialtheae unc.s, oleorum chamaemelli, violacei,
amygdalarum dulcium ana dr.i, axungiae gallinae dr.i. Fiat unctio,
et linteum duplicatum supraponatur. Pilularum de succino dr.i.s
hora cubitus, mane totus tumor paene sublatus.

Saepe usus pro gargarismo:
℞: syrupi papaveris unc.s, aquae papaveris unc.iii, olei vitrioli
quantum satis ut acida reddatur.

Duobus diebus curatus ex toto.

[Case 80]  Febris malignae, doloris splenis.
tumoris testiculorum cura.  1618.
Eques Raynforde aetatis 35, febris maligna, siti, flatu, dolore
splenis, tumore testiculorum, melancholia hypochondriaca misere
cruciat us. Sic se purgabat: mannae unc.s, rhabarbari expressi dr.i,
possetalae quantum satis: sedes quinque sine levamine ullo. Tunc
meum petit consilium.

Spleni applicabam emplastrum hoc:

21 aetatis 35\et 35/.
℞: pills - cochiae ½dr, aureae 1dr, trochischated agaric ½sc. Make 7 pills with betony water. Ten stools and three vomits. She passed four large long worms at one evacuation.

These alone freed her from the above symptoms.

[Case 79] Cure of a swollen face.

Baron Compton, President of Wales: severely tortured and disfigured by swelling of the face, springing from catarrh. I visited him and prescribed the following treatment:

℞: marsh mallow ointment ½oz, oils of chamomile, violet, sweet almond each 2dr, chicken fat 1dr. Make an ointment, spread it on a folded cloth. Amber pills: 1½dr at bedtime. In the morning the swelling was entirely gone.

He used the following gargle often:

℞: poppy syrup 1oz, poppy water 3oz, sufficient oil of vitriol to render it sharp.

He was cured of everything after two days.

[Case 80] Cure of malignant fever, pain in the spleen, testicular swelling. 1618.

Squire Rainsford, aged 35: wretchedly tortured by malignant fever, thirst, wind, splenic pain, swelling of the testicles, hypochondriac melancholy. He purged himself with manna ½oz, expressed rhubarb 1dr, sufficient posset ale: five stools without any relief.

Then he asked my advice.

I applied this plaster to the spleen:

---

℞: labdani dr.ii, cerae flavae unc.i, emplastri meliloti unc.i,
emplastri ex Saturno rubro unc.s. A flatu rite liberatus.

Pro tumore flatuoso testiculorum:
℞: emplastri nostri Saturnali et meliloti ana partes aequales, sed
prius cataplastate ex ruta, chamaemelli, parthenio in vino clareto, ebullito et adhibeto tumori. Hoc sublato, applicetur emplastrum praedictum exoptato eventu, nam tumor ex toto sublatus fuit.

Usus glistere emollienda:
℞: olei seminum lini unc.8 or rutae, chamaemelli ana unc.i,
diaphaeniconis et diacatholiconis ana unc.s. In vino Hyspanico dissolvantur. Fiat gister: ii sedes cum flatibus. A tumore et splenis dolore liberatus, nondum stomachus nec appetitus recte fuerunt. Idciro 3a die dabam poculi chymici unc.i, aquae caelistis gut.iii:
vomitus vi. Die sequenti cibum commedebat.

Eadem die a vomitu, hora somni:
℞: diascordii dr.i, syrupi limonum unc.i, possetalae quantum satis.
Et sequenti die a vomitorio, clysterem ex diacatholico, saccharo rubro et lacte: ii sedes.

Et sic, laus Deo, ad pristinam sanitatem restitutus.

[Case 81] Cancri tibiae cura.
Generosus Barnes aetatis 36, diu cancro tibiae claudus. Corpus rite purgatum pilulis, deinde usus decoctione guaiaci, postea topicis adhibitis. Rite curatus.

Martini, ‘De scorbuto’, in Sennert, De scorbuto tractatus, pp. 746-747, refers to Emplastra ex Saturno Langii, but I have not found a recipe.

Saturno] an unusual alternative to the commoner minio, for lead. 4 emplastri nostri Saturnali] probably referring to emplastrum ex Saturno rubro above.
℞: labdanum 2dr, yellow wax 1oz, melilot plaster 2oz, plaster of red lead ½oz. He was rightly freed from wind.

For the fluctuant swelling of the testicles:
℞: our lead and melilot plasters in equal amounts, but first a poultice of rue, chamomile, feverfew in \(\frac{1}{73}\) in claret wine. Boil and spread this on the swelling. When this was removed, the above plaster was applied with the desired result, for the swelling was entirely removed.

He used this softening enema:
℞: linseed oil 8oz or rue, chamomile oil each 1oz, diaphoenicon and diacatholicon each \(\frac{1}{2}\)oz. Dissolve in Spanish wine. Make an enema: two stools with wind. He was freed from the swelling and pain of the spleen. Neither the stomach nor the appetite were yet as they should be, so on the third day I gave the chymical cup 1oz, caelestis water 3 drops. Six vomits. The next day he started eating.

The same day after the vomit, before sleeping:
℞: diascordium 1dr, lemon juice 1oz, sufficient posset ale. The day after the vomitory, an enema of diacatholicon, red sugar and milk. Two stools.

And so, praise God, he was restored to his former health.

[Case 81] Cure of a canker on the leg.

Mr Barnes, a gentleman aged 36: limping for a long time because of a canker of the leg. His body was suitably purged with pills, then he used guaiacum decoction, then external applications. He was
℞: vitrioli albi unc.ii, boli Armeni unc.i.dr.ii, camphorae dr.iii. Fiat pulvis. De quo ℞ unc.i, quem proiice in aqua fere ebullientem /74/ et relinque parum fervescere et amove ab igne. Subsident faeces. Ista aqua tepida, fove cancerum sine alio additamento.169

Cum paene curatus, cicatricem inducebam sequenti emplastro:

Praecedat haec lotio sequens:

Sic curatus perfecte, qui multa frustra a chirurgis tentatuit sine fructu.

[Case 82] Dysenteriae, menstruorum fluxus cura.

Shefeelde uxor agricoleae de veteri Stratforde, aetatis anno 48: dysenteria misere lancinata et fluxu menstruorum rubrorum debilitata, menstrua antea retenta spacio 5 annorum.

---

169 Penot, De denario medico, p. 70. ℞ vitrioli albi lib.s, boli Armeni unc.v, camphorae dr.i.s. Fiat pulvis, de quo accipe unc.i.s, quem proiice in aquam fere bullientem, et relinque parum fervescere, et amove ab igne; subsident faeces. Ista aqua tepida, fove quaevis ulcera, sine alio additamento.

7 plumbi ☿.
properly cured:

℞: white vitriol 2oz, bole Armeniac 1oz 2dr, camphor 3dr. Make a powder. Take 1oz of this, put it in water almost boiling. Leave a little while to get hot and remove from the fire. The dregs will settle. Clean the canker with this warm water, without any other addition.

When he was nearly cured, I encouraged scabbing with the following plaster:

℞: white lead ½lb, chalk 4dr. Make a powder. Make a styptic plaster with pork fat by the usual method. Apply to a thickness of one finger. Leave for 9 days.

This lotion came first:

℞: sufficient white copperas. Boil in sufficient spring water, wash the ulcer with it. When the first plaster is removed, another should be applied which will stay for six days, and when that is removed a third, for three days. NOTE: the canker should always be washed with the above water.

He was perfectly cured in this way, after vainly trying many remedies from surgeons, to no purpose.

[Case 82] Cure of dysentery, menstrual flux.

Sheffield, a farmer’s wife of Stratford Old Town, 48 years old: wretchedly attacked by dysentery and weakened by red menstrual flux. Her periods had previously been suppressed for the past five years.

---

3 water almost boiling] S.O.: hot smith’s forge-water [reading ferre for fere, which is in the source]. 5 without any other addition] S.O. adds: and a cloth laid upon it wet in the said water. 12 copperas] following S.O. 17 after... purpose] S.O. omits. 20 Case 82] S.O.: Observ. LXXXVI [First Century], p. 76. 21 Stratford Old Town] The area around Holy Trinity Church in Stratford upon Avon still has this name.
Haec convalescebat, hisce paucissimis quantitate, ac virtute praestantissime:\textsuperscript{170}

℞: pilularum laudani gr.vi, Mithridatii sc.s, conservae rosarum dr.i.s, croci Martis sc.i. Misce. A menstruorum fluxu et ventris profluvio liberata, site tamen vexata.

℞: aquae papaveris rheadis unc.4, syrupi violarum unc.i. His a site et fluxu liberata et curata.

[Case 83] Anorexiae, rheumatis cura.

Pro illustrissimo Heroi ac Domino Gulielmo Compton Praesidi Cambriae, /75/ rheumatis e capite in gingivas distillantis, et anorexiae,\textsuperscript{171} Curavi et sanavi, capiendo sequenti:

℞: foliorum senae abiectis stipitibus unc.s, rhabarbari optimi dr.ii, agarici electi dr.i, cinamomi praestantissimi dr.vi. Infundantur omnia per horas xii lege artis, in aqua boraginis et cichorii tepentis ana unc.10. Mane, bulliant ad consumptionem unc.4, deinde colentur sexties vel septies, et dulcorentur unc.4 sacchari optimi in modum nectaris.\textsuperscript{172} Huius accipiebat hora cubitus unc.ii. Mane unam tanta modo habuit sedem magnam et foetidam, Aprilis 21.

Die 22:

Mane praedictae decoctionis cepit unc.5, ex quibus octo sedes.

23:

\textsuperscript{170}Ruland the Elder, ‘Centuria VI’, Curationum [...] centuriae, p. 417.

\textsuperscript{171}Bruele, Praxis medicinae, f. 2r [see page /4/]. |

\textsuperscript{172}Ranzau, De Conservanda, pp. 63-64: Rec. foliorum senae Alexandr. recentium abiectis stipitibus unc.i. rhabarbari optimi drachmas ii. Agarici electi drachmas iii. Cinnamomi electi unciam unam semis. Infundantur per horas xii secundum artem in sextaris duobus repentis vini Rheensis optimi. Deinde colentur per saccum lanuem [...] sexies aut septies, et dulcorentur lib.semis sacchari optimi in modum nectaris [See also /1/].
She recovered with these, very little in quantity but of outstanding power:

℞: laudanum pills 6gr, Mithridate ½sc, conserve of roses 1½dr, crocus Martis 1sc. Mix. She was freed from the menstrual flux and diarrhoea of the bowels, but was still troubled by thirst.

℞: corn poppy water 4oz, syrup of violets 1oz.

These freed her from thirst and flux, and she was cured.

[Case 83] Cure of loss of appetite, catarrh.

For the most illustrious hero and Lord, William Compton, Lord President of Wales: /75/ with rheum from the head dripping into the gums, and loss of appetite. I cured and healed him by having him take the following:

℞: senna leaves detached from the stalks ½oz, best rhubarb 2dr, choice agaric 1dr, excellent cinnamon 6dr. Infuse everything by the usual method for twelve hours, in lukewarm borage and chicory waters each 10oz. In the morning boil, reduce by 4oz, then strain six or seven times, and sweeten with 4oz best sugar in the form of nectar. He took 2oz of this at bedtime. In the morning he had a single large foul-smelling stool. 21 April.

22nd:

He took 5oz of the above decoction in the morning; eight stools from this.

23rd:

---

℞: pilularum auroarum, de rhabarbaro ana dr.i, ex quibus 13 sedes. Post tertiam sedem parum aegrotabat. Iusculo ex herbis et crusta panis accepto (nam fuit dies passionis Christi) statim convaluit. Corpore optime purgato, decoctionem sequentem administrabam:

℞: chynae in talleolas sectae dr.ii, radicis sassaphras in tenues orbiculos sectae unc.s. Bulliant lege artis in lib.8 ad 4, de quo quater in die ad minus bibet et sic per 8 dies. Omni alio die devorabat pilulas Ruffi sc.ii conformatas. His finitis, Deo gratias, optime et athletice valet.

[Case 84] Cibi indigestionis et hepatis obstructionis cura.

Domina Beaufou, de indigestione cibi et flatu post pastum conquesta, cui sequentem biream praescipi, felici et optato eventu:

℞: radicis lapatii expurgatae unc.4, foliorum agrimoniae M.v, foliorum cichorii cum toto M.ii. Coque in congiis tribus cervisiae novissima ad consumptionem congii.s. Cola et adde florem cervisiarium. Liquor in vas reconditur, cui immerge sequentia in sacculo raro linteo inclusa:

℞: sarsaparillae, sassaphras, /76/ rasurae eboris ana unc.i, senae, polypodii ana unc.v, hermodactylis unc.ii, liquiritiae unc.s, galangae, rhabarbari ana unc.s, mecoachan unc.i, cinamomi, caryophylli ana dr.i. Communiont omnia grosso modo et misce (et cum lapide nam fandum attemperaret in sacculo incluso) et filo

26 attemperaret] attempeteret.
℞: pills aureae, rhubarb each 1dr. Thirteen stools from these. After
the third stool he was a little better. After taking broth with herbs
and a crust of bread (for it was Good Friday), he at once recovered.

After the third stool he was a little better. After taking broth with herbs
and a crust of bread (for it was Good Friday), he at once recovered.

After a very good purge of the body, I gave the following
decotion:
℞: china sliced in pieces 2dr, sassaphras root sliced in thin rounds
½oz. Boil by the usual method in 8 pints, reduce to 4 pints. Drink
this at least four times a day, for eight days. On alternate days he
swallowed well made Ruffus’s pills 2sc.

When these were finished, praise God, he was very well and fit.

[Case 84] Cure of indigestion of food, and liver
obstruction.

Lady Beaufou: complained of indigestion of food and wind after
eating. I prescribed the following beer for this, with the desired
happy result:
℞: washed dock root 4oz, agrimony leaves 5 handfuls, leaves of
chicory with everything 2 handfuls. Boil in 3 gallons very new beer,
reduce by ½ gallon. Strain. Add flowers of yeast. Put it away in a
vessel, in which immerse the following inside a thin linen bag:
℞: sarsaparilla,sassaphras, 76/ ivory shavings each 1oz, senna,
polypody each 5oz, colchicum 2oz, liquorice ½oz, galangals,
rhubarb each ½oz, mechoachan 1oz, cinnamon, cloves each 1dr.
Break them all up coarsely and mix (with a stone if that may be
properly accommodated) and fasten it with a string at the top of the

1 After...3 recovered] S.O.: After the third stool he began to be better, there being
taken broth. The body was well purged. 12 Case 84] S.O.: Observ. LXXXVIII [First
Century], pp. 77-78.
summitati dolioli alligetur. Post 10 vel 12 dies capiat haustum mane et sero.

Rite purgata, et cibum optime digerit. Gratias dedit.

[Case 85] chiragrae et podagrae cura.

Eques Packington, ut Londinum curru eveheretur, subito in hospitio chiragra et podagra misere afflicitus, ut nec stare nec tractare aliquis potuit. Meum petens consilium, sequenti levatus:

His ita restitutus, et 3a die Londinum equitabat et multas mihi gratias dedit.

[Case 86] Doloris stomachi a flatu cura.

Wilsune opidana, circa aetatis annum 48, dolore stomachi cibique indigestione misere per longum tempus cruciata, ut cibum capere non ausit. Meum petens consilium, hoc unico pulvere curata:

---

173 Solenander, Consiliorum [...] Solenandri, p. 429: Recipio malvam integram cum radicibus concisam minutim, eam in aequis vini et aceti partibus coquo in fictili novo, ad tertiae partis consumtionem, deinde admisceo secalis crassiores furfures q. satis |

174 Croll, Basilica chymica, p. 277: In aqua sperniolae perse destillata, si tantillum aluminis solvatur. Doloribus podagricis linteis madefactis commode et cum successu applicatur.
(cask). After ten or twelve days, take a draught morning and evening.

She was rightly purged, and digested food very well. She thanked me.

Case 85: Cure of gout in the fingers and feet.

Squire Packington: suddenly and wretchedly afflicted with gout in the fingers and feet, at an inn while travelling to London by carriage. He could neither stand nor handle anything. After asking my advice, he was restored with the following:

℞: mallow with the roots cut small. Boil in equal amounts of wine and vinegar, reduce to a third part, then add coarse rye husks. After light boiling, bruise, apply hot to the painful joints. He was well restored within the space of one day, and was freed from inflammation. He used a fomentation of distilled frog spawn water, then I applied diachalcitys plaster. The same day I advised him to drink 2dr of Montagnana’s senna powder with colchicum 15gr.

These restored him, and on the third day he rode to London, and gave me many thanks.

Case 86: Cure of stomach ache with wind.

Wilson of Stratford upon Avon, about 48 years old: wretchedly tortured for a long time by stomach ache and indigestion of food, so that she dares not take food. After asking my advice, she was cured.

---

17 See Appendix B: New Patient Identifications.

℞: senae dr.vi, zingiberis albi, seminum foeniculi, zedoari, seminum cumini ana dr.ii, caryophylli, galangae, nucis moschatae ana dr.i, rhabarbari dr.ii, sacchari candi dr.vi. Fiat pulvis. Dosis mane quantum fabae super panem tostum in vino madefactum, hora cubitus quantum avellanae cum pauxillo vini.

Curata.

[Case 87] /77/ colicae lumbaginisque cura.
10 Generosa Hanberey Wigorniensis, aetatis 30, lumbagine incurvata ita ut erigere se non potuit, colicaque lancinata.
℞: emplastrum nostrum carannae.
℞: herbarum parthenii, rutae, chamaemelli ana M.i, seminum carvi, cumini, levistici, anisi, dauci ana M.s. Bulliant lege artis in satis quantum vini clareti, deinde coletur non fortiter, et reservetur vinum expressum. Applicetur cataplasma inferiori ventris parti calide, eo frigefacto iterum in sartagine cum vino praedicto expresso calefieret, bis vel 3a ut opus est. Semina urticae rubrae cum summitatibus bulliant in vino albo, de quo capiat mane haustum calide.

Rite recteque curata, et ab omni symptomati liberata. Laus Deo.

[Case 88] Menstruorum rubrorum cura.
with this one powder:

℞: senna 6dr, white ginger, fennel seed, zedoary, cumin seed each 2dr, cloves, galangal, nutmeg each 1dr, rhubarb 2dr, sugar candy 6dr. Make the powder. Dose: the amount of a bean on toasted bread moistened with wine in the morning; at bedtime the amount of a hazelnut, with a little wine.

Cured.

[Case 87] /77/ Cure of colic and backache.

Mrs Hanbury, a gentlewoman of Worcester aged 30: so bent over by lower backache that she could not stand erect, and attacked by colic.

℞: our caranna plaster.

℞: green shoots of feverfew, rue, chamomile each 1 handful, seeds of caraway, cumin, lovage, anise, carrot each ½ handful. Boil by the usual method in sufficient claret wine, then strain without force, and keep the expressed wine. Apply the hot plaster to the lower part of the belly. When it becomes cold, heat it again in an oven with the above expressed wine, two or three times as needed. Boil red nettle seeds with their tops in white wine. Take this hot in the morning.

She was rightly and properly cured, and freed from all symptoms, praise God.

[Case 88] Cure of red menstrual flux.

---

Soror vicini Sheffelda, nimio menstruorum fluxu debilitata, a me sic cito curata:
℞: aluminis de pluma pondus ii denariorum, in aqua rosarum, et sic per iii dies. Ieiunet horis ii, tunc capiat iusculum ex carne ovina et his herbis: millefolium, corticem interioris roboris, et bibat potum chalybeatum.
Curata cito et tuto.

[Case 89] Torturae oris curatio, Sepembris 29.
℞: unguentum cum oleis ut pro filia.
℞: aquae rosarum unc.6, olei vitrioli ut acida reddatur. Teneat in ore.
His curata. Quaere folio /34/.

[Case 90] Fluxus sanguinis e dente evulso cura.
℞: Generosus Barnes de Clifforde, senio confectus ex dente putrido sito, sine aliqua difficultate vel dolore evulso. Post biduum /78/ ab evulsione, [.../ ingens secuta haemorrhagia ex arteria gingivae subdita, cuius dens inmtebatur sanguine ubertim fluente [...] qui a
The sister of neighbour Sheffield: weakened by excessive menstrual flow. I cured her quickly, in this way:

℞: plume alum, the weight of 2 pennies in rose water.\(^{18}\) Continue the course for three days. Fast for 2 hours, then take mutton broth and these herbs: yarrow, inner bark of oak, and drink steeled fluids.

She was cured, quickly and safely.

[Case 89] Cure of spasm of the mouth. 29 September.

Lady Rous: 8 months pregnant, disfigured by spasm of the mouth.

Age: 28 years more or less, tall in stature.

℞: sufficient rosemary ashes. Make a lye with white wine. Warm the affected area with a warm cloth folded in three.

℞: the ointment of oils, as for my daughter.

℞: rose water 6oz, oil of vitriol to make it sharp. Hold in the mouth.

These cured her; see page \(/34/\).

[Case 90] Cure of bleeding from an extracted tooth.

Mr Barnes, a gentleman of Clifford: reduced to the feebleness of old age by a rotten tooth, extracted without difficulty or pain. Two days after \(/78/\) the extraction a huge haemorrhage followed, from an artery which supplied the tooth in the gum bleeding copiously. I

14 Martis| 0°.
cured this in a short time, after he remained continuously bloodstained for twenty four hours, not calling a physician.

Since I had no remedy to hand, I prescribed cold water held in the mouth and often spat out. He did that until other medicines were prepared, but the use of the water restrained the flow.

Afterwards:
℞: white vitriol 2 pinches, bole Armeniac 1 pinch, camphor ½ pinch, sufficient hot rose water. Make a lotion. On my instructions he applied a cold soaked cloth to the gum several times. After five hours it stopped, having kept him awake for much of the night. Sleep took a stronger hold than usual. Sleep released him after five hours had passed, and the bleeding restarted, not with much force. I could not stop it with the aid of lesser aids, so (when other remedies have been used in vain) I had to fight with stronger ones. I prescribed a sponge wetted with crocus Martis and the above vitriolated water, wrapped round and filling up the eroded place, by which the flow was controlled, and suppressed entirely, nor did it return in greater amount. Praise God the creator of medical practice.

This is well-proven. He was cured. 1 January 1619.
[Case 91] vertiginis cura experta.

Postremo accipiatur stercoris pavonis masculi pro masculo siccat ut pulveris dr. i, maceretur per noctem in vino albo. Omnia per linteum trajecta exhibeatur, idque continuatur a novilunio ad plenilunium.  

Curatus.

Domina Rouse, gravida, matricis suffocatione cum animae deliquio misere divexata, cum extremo capitis dolore.

Mane stomacho ieiuno capiebat quantitatem nucis moschati sequentis electuarii:

---

180Du Chesne, Pharmacopoea dogmaticorum, p. 148: Paratur autem ex stercore pavonis masculi, pro maribus, quod siccandum et pulverizandum, dein maceretur de eo drachma una per noctem integram in vino albo: omnia per linteum trajecta exhibeantur vertiginoso, idque continentur a novilunio usque ad plenilunium.

3 Hudson] in margin.
[Case 91] Well-tested cure of giddiness.

For Hudson, a poor man suffering from giddiness: venesection of the cephalic vein to 10oz. He was purged with pills - aureae, cochiae 2sc each, alhandal trochees 8gr. Make 7 pills. Nine stools. Afterwards he took peacock droppings, of a male for a male. Dry for a powder 1dr, soak overnight in white wine. Give when everything has been passed through a cloth, and continue from the new to the full moon. Cured.

[Case 92] Cure of headache, suffocation of the womb.

Lady Rous: pregnant, wretchedly troubled by suffocation of the mother with fainting and extreme headache.℞: fumes of burnt horse hoof. She quickly came to herself when the smoke was drawn into her nose. Then she had a suppository of honey and holy powder, resulting in seven stools with a large amount of wind. She had the fumes of fragrant things applied below, and stinking ones to the nostrils. I prescribed an ointment for her neck with spikenard, then Martiatum ointment, because she had suffered from facial paralysis the previous year and now feared it greatly.

She took the following electuary in the morning, the quantity of a nutmeg on an empty stomach:

---

℞: dianthi, conservae boraginis ana unc.i, Mithridatii, diacymini ana dr.ii, corne cervi praeparati dr.iii. In iusculo capiebat cornum cervi praeparatum. Umbilico, emplastrum ex caranna simplice, in cuius medio iii grana moschi imposita.

5 His liberata et postea debito tempore peperit filiam. 1620 Martii 16.

[Case 93]  Menstrui diminutionis, capitis doloris cura.

Generosa Maria Murden, dolore capitis, rubore faciei post pastum, menstruum diminutione et discoloratione laborat, aetatis 17.
℞: radicem foeniculi, petroselini, ana unc.ii, asparagi, brusci ana unc.iii, calami aromatici unc.s, herbarum betonicae, artemisiae, caryophillatae, nasturtii aquatici, hyssopi, rosmari, pulegii, urticae ana M.s, radices enulae campanae unc.s, liquiritiae unc.ii, seminum anisi, foeniculi, ana unc.iii, passularum enucleatarum M.i, senae, polypodii quercini ana unc.4, hermodactylis unc.ii, rhabarbari, agarici ana dr.ii. Bulliant in lib.8 aquae fontanae, ad dimidias. Exprimantur. In expressione dissolve syruporum arthanitae, augustani, cichorii cum rhabarbaro ana unc.ii. Dosis ab unc.iii ad v.

Huius usu, cito curata.

[Case 94] /80/  Vermium e umbilico

exeuntium cura.

Dixwell Brunt de Pilerton, aetatis anno 3°, tumore duro umbilici
℞: clove-gillyflower, borage conserve each 1oz, Mithridate, diacyminum each 2dr, prepared hartshorn 3dr. She took the prepared hartshorn in broth. To the umbilicus: a simple caranna plaster, in the middle of which 3gr musk were placed.

These freed her, and afterwards she bore a daughter at the due time. 16 March 1620.

[Case 93]  Cure of scanty menstruation, headache.
Mary Murden, a gentlewoman: suffers from headache, red face after eating, scanty and discoloured menstruation. Age: 17.
℞: fennel, parsley roots each 2oz, asparagus, broom each 3oz, sweet flag ½oz, leaves of betony, mugwort, cure-all, watercress, hyssop, rosemary, pennyroyal, nettles each ½ handful, elecampane root ½oz, liquorice 2oz, anise and fennel seeds each 3oz, stoned raisins 1 handful, senna, polypody of the oak each 4oz, colchicum 2oz, rhubarb, agaric each 2dr. Boil in 8 pints spring water, reduce to half. Squeeze out. Dissolve syrups of cyclamen, wallflower, chicory with rhubarb each 2oz. Dose: from 3 to 5oz.

The use of these quickly cured her.

[Case 94]  Cure of the emergence of worms from the umbilicus.
Dixwell Brent of Pillerton, aged 3 years: when a hard umbilical

rupto, quinque vermes longi (ad similutudinem vermium e ano exeuntium) per parvum foramen in modum fistulae. Evellebat 4 mortuos nutrix, quintus vero vermis semimortuus, anterior pars immota, posterior se movebat. Testes: nutrix, mater, pater, et ancillae. Foramine aperto et tumore adhuc duro (nam oculatis feci testis) emplastrum solummodo ex melle crudo applicare iubebam. Eodem die, suppositorium ex melle administrare iubebam.\(^{181}\) Nullum vermem progredientem vidimus, idcirco sequenti die cataplasmatem ex absinthio recenti contuso et felle bovino cocto umbilico applicare vellem, et suppositorium ex melle.

Puer laetus hinc coloratus, umbilicus curatus, vivit nunc sumpta virili toga. Anno 1620 Aprilis 27.

℞: decoctionem ut pro generosa Murden, folio /79/., additis rhabarbari dr.ii, senae unc.s. Dosis unc.4, et sic per iii dies: primi die 8 sedes; 2\(^{a}\) 18; 3\(^{a}\) 15 sedes, sine virium amissione. Postea capiat quantitatem avellanae electuarii diacubebarum, per 5 matutinas.

Deinde utetur decocto guaiaci in hunc modum praeparato:

℞: ligni sancti lib.i, [...] soldanellae siccae M.i, cinamomi unc.ii,

\(^{181}\)Platter, De vitiis, p. 985: Ad interimendas ascarides, suppositorium ex melle coctum, permiscendo Aloen et Fella, valde est efficax [honey suppositories are mentioned elsewhere, but only here in connexion with worms].
swelling broke, five long worms (similar to worms appearing from
the anus) [emerged] through a small hole like a fistula. His nurse
removed four dead ones. The fifth worm was actually half dead, the
front half motionless, the rear moved. Witnesses: the nurse, his
mother and father, and servants. The hole being open and the
swelling still hard (for I was an eye-witness) I prescribed only the
application of an unrefined honey plaster. The same day I
prescribed the administration of a honey suppository. We did not
see any worms appear, so the next day I wished a poultice of freshly
bruised wormwood and boiled cattle bile applied to the umbilicus,
and the honey suppository.

The happy boy's colour was thus restored and the umbilicus
healed. He is still alive, and now wears adult clothes. 27 April
1620.

[Case 95] Cure of generalised dropsy.
The [first] Countess of Northampton, 6 May 1620: fell into a
generalised dropsy with swelling of the face and feet.
℞: the decoction as for Mrs Murden, page /79/, with the addition of
rhubarb 2dr, senna ½oz. Dose: 4oz. Continue the course for four
days: eight stools on the first day, eighteen on the second, fifteen
stools on the third without loss of strength. Then take electuary of
cubebs, as much as a hazelnut, on five mornings.

Next she is to use guaiacum decoction prepared in this way:
℞: guaiacum wood 1lb, dried snowbells 1 handful, cinnamon 2oz,

Omni mane quando sudabat, accipiebat una hora elapsa electuarium diacubebae, et omni 3\textsuperscript{a} die purgata.

℞: mecoachani dr.i.s, syrupi rosacei solutivi unc.i, aquae absinthii, vini Hyspanici ana unc.ii: sedes ii, deinde vomitus ii, postea sedes iii, deinde vomitum i, postremo sedes 12, exoptato eventu, nam tumor omnis sublatus. *Usa est electuario chalybeato Cratonis.*

His rite recteque curata et colorata, spacio 20 dierum, laus Deo.

[Case 96] Stomachi et capitis doloris cura.

Generosa Goodman, circa aetatis annum 54, capitis doloris et stomachi gravata.

℞: massae pilularum mastichinarum sc.ii, aloes rosati sc.i. Cum syrupi rosati solutivi reformentur pilulae mediocris. *Capiat ante cenam, sic per iii dies. Postea, stomacho ieiuno, Capiat electuarium quod:*

\footnote{\textit{Valleriola: Observationum[...]} \textit{libri sex}, p. 89: Parabam autem decoctum ex ligni sancti in ramenta pulverati lib.i, in aquae libris novem decocti (erat autem aqua pluvia) ad dimidias et sub finem decoctionis adiciébam soldanellae siccae manipulum, interioris cinamomi uncias duas, passularum cum acinis unc.ii. Ubi perfecta decoctio esset, illam calentem in alterum vitreum vas infundi iubebam, in quo vini generosi libras tres inieceram et ex hoc syrupo calido uncias novem mane sumere, vespere vero uncias sex consulebam: eamque probe stragulis opertum elicere sudorem, qui fat multus fluebat, coegi [see /172/].}
raisins 2oz. Boil in 9 pints water, reduce to half. After the boiling was completely finished I ordered it put, hot, into another glass vessel, into which I had poured three pints good wine. *81/* I advised her to take 6oz of the hot syrup in the morning, 4oz in the evening. I advised her to cover herself completely with bed-coverings, to elicit sweat. Every morning when she sweated, she took the diacubeb electuary one hour later, and was purged every third day:

℞: mechoachan 1½dr, loosening syrup of roses 1oz, wormwood water, Spanish wine each 2oz. Two stools, then two vomits, then three stools, then one vomit; finally twelve stools with the desired result, because the swelling disappeared. She used Crato’s steeled electuary.

These cured her rightly and properly and restored her colour within twenty days. Praise God.

[Case 96] Cure of stomach ache and headache.

Mrs Goodman, a gentlewoman aged about 54 years: oppressed by headache and stomach ache.

℞: a mass of mastich pills 2sc, aloes rosata 1sc. Re-shape the pills into medium size with loosening rose syrup. Take before meals, continue the course for three days. Finally, take this electuary on

---

16 Case 96 S.O.: Observ. C [First Century], p. 85.
℞: conservae rosarum rubrarum unc.4, speciei aromatici Gabrielis
dr.i.s, caryophyllae incisae dr.i, ambrae griseae gr.vi. Misce cum
syrupi de corticibus citri, fiat electuarium. Dosis magnitudo
castaniae.

Sic pauxa ista optimum adiumentum statim attulerunt, et ad
integram sanitatem pervenit.

[Case 97] Manum pruritus cura.
Generosus Penill, gener Equitis Grevill de Milcot, lenticulis et
pustulis manum gravatus. His ruptis, aqua clara venenosa
extillabat, quae totas manus maxima inflammatione et excoriatione
cruciebat. Multis remediiis externis incassum adhibitis, caput
quoque inflammatione et ardore et squamis scatit. Circa aetatis
annum 38.

Sic liberatus:
℞: agrimoniae, cochleariae, nasturtii aquatici ana M.i, salviae,
cichorii, fumariae ana M.s, radicis enulae campanae unc.s,
polypodii quercini unc.iii, radicis sassaphras unc.s. Bulliant in
lib.12 /82/ aquae fontanae ad consumptionem medietatis. Coletur,
colaturae adde rhabarbari, agarici ana unc.s, senae laxativae unc.i,
liquiritiae unc.i, seminum anisi, carvi, coriandri ana dr.ii, cinamomi
dr.i. Bulliant iterum ad duarum librarum consumptionem.
Colaturae adde syrupi rosarum solutivi unc.i, olei vitrioli gut.12.
Fiat. Dosis unc.4 per 4 dies continuas, omni die 6 vel 7 sedes.

Topicum:

183Ruland the Elder, ‘Centuria III’, Curationum [...] centuriae, p. 184. | 184Ruland the
Elder, ‘Centuria III’, Curationum [...] centuriae, p. 185.
an empty stomach:

℞: red rose conserve 4oz, Gabrieli’s aromatic powder 1½dr, sliced cloves 1dr, ambergris 6gr. Mix with citron rind syrup. Make the electuary. Dose: as much as a chestnut.

So a little of that brought her immediate help, and she came to complete health.

[Case 97] Cure of itching hands.

Mr Penell, a gentleman, son-in-law of Squire Greville of Milcot:

oppressed by eruptions and pustules on his hands. When these ruptured, a clear poisonous water dripped out, which greatly tortured the whole of his hands with inflammation and excoriation. Many external remedies were applied in vain. His head is also overflowing with inflammation, heat and scales. Age: about 38 years.

He was freed like this:

℞: agrimony, scurvy grass, watercress each 1 handful, sage, chicory, fumitory each ½ handful, elecampane root ½oz, polypody of the oak 3oz, sassaphras root ½oz. Boil in 12 pints /82/ spring water, until half is gone. Strain. To the strained liquid add rhubarb, agaric each ½oz, laxative senna 1oz, liquorice 1oz, seeds of anise, caraway, coriander each 2dr, cinnamon 1dr. Boil again until two pints are gone. To the strained liquid add loosening rose syrup 2oz, oil of vitriol 12 drops. Dose: 4oz on four consecutive days. Six or seven stools each day.

For external use:

---

℞: unguenti albi camphorati cum succo sempervivi maioris, mixti quantum vis, cum quo inunxit manus. Venae iecorariae sectio ad unc.vii.

His cito curatus, et a scabie liberatus.

[Case 98] Icteritiae citrinae, menstrui obstructionis, vomitus, haemorrhagiae cura. 1621 Aprilis 4.

Rogers opidana, circa aetatis annum 17, vomitu, menstruorum obstructione, icteritia, hemorrhagia laborabat.

℞: poculi chymici dr.vii, syrupi violarum coch.s: vomitus vii, sedes 5.
℞: decoctionis sarsaparillae unc.iii, pulveris senae laxativae dr.i.s. Optime purgata.

3a die:
℞: dr.s excrementi albi gallinarum in vino albo cum saccharo.

Ab icteritia 3a die curata.

[Case 99] Febris ardentis, icteritiae citrinae, ventriculi tumoris cura.

℞: white camphor ointment mixed with juice of common houseleek as much as you like, with which anoint the hands. Venesection of the right basilic vein to 7oz.

These cured him quickly and freed him from the itch.

[Case 98] Cure of yellow jaundice, obstructed menstruation, vomiting blood. 4 April 1621.

Rogers of Stratford upon Avon, about 17 years old: suffered from vomiting, obstructed menstruation, jaundice, bleeding.

℞: the chymical cup 7dr, syrup of violets ½ spoonful: seven vomits, five stools.
℞: sarsaparilla decoction 3oz, laxative senna powder 1½dr; very well purged.

On the third day:
℞: ½dr of the white droppings of fowls, in white wine with sugar.

She was cured of the jaundice on the third day.

[Case 99] Cure of burning fever, yellow jaundice, abdominal swelling.

Mrs Randolph, a gentlewoman aged 55: tortured for a long time by burning fever, from which she fell into yellow jaundice. Urine: red like saffron. She suffered from abdominal pain with swelling and hardness, lower backache, splenic swelling, dropsy. She asked my advice after three weeks had passed since the beginning of the illness.

℞: poculi chymici dr. vi, oxymellitis scillitici dr. ii, syrapi violarum coch.s: vomitus iii, sedes iii.

Die sequenti:
℞: electuarii de succo rosarum dr. ii /83/ diacatholiconis dr. i.s, diapaeaniconis dr. ii.s, rhabbarari electi sc.s, spicae gr. v, syrapi cichorii cum rhabbararo unc.s, aquae cichorii unc. iii. Fiat haustus: sedes 18. Potus ordinarius die quietis, decoctio cornu cervi.

A febre liberata, icteritia adhuc manente, pro qua extirpanda:
℞: vini albi lib. i, aquae chelidoniae unc. vi, croci dr. i, theriacae Andromachi dr. iii, lapidis bezoar sc. i, succi stercoris anserini coch. vii. Fiat potus sudorificus: dosis unc. 4 stomacho ieiuno. Capiat ad 4 dies.

Sero utere sequenti electuario:
℞: santali rubri at albi ana dr. iii, passularum Corinthiacarum in vino albo infusarum, post in cribro transmissarum unc. 4, rhabbarari dr. i, croci sc. i. Misce, fiat electuarium, quantitas nucis moschati.

In ventris tumorem:
℞: unguenti Agrippae unc. i, arthanitae unc. s, Martiati dr. iii, oleorum nardini, ruteae, scorpionum ana dr. ii, aquae vitae parum, acetii guttas aliquot. Fiat unguentum lege artis.185

His curata, laus Deo, praeter amicorum expectationem.

185Bruele, Praxis medicinae, p. 335; R: unguenti Agrippae unc. i.s, arthanitae unc. i, martiati, olei nardini, scorpionum ana unc. s, succi ruteae dr. iii, aquae vitae unc. s, acetii guttas aliquot, fiat unguentum arte.
illness.

℞: the chymical cup 6dr, oxymel of squills 2dr, syrup of violets ½sp: three vomits, four stools.

The next day:

℞: electuary of rose juice 2dr, /83/ diacatholicon 1½dr, diaphoenicon 2½dr, choice rhubarb ½oz, spikenard 5gr, chicory syrup with rhubarb ½oz, chicory water 3oz. Make a draught: eighteen stools. Her usual drink on the quiet day was hartshorn decoction.

She was freed from the fever, yet the jaundice remained. To remove it:

℞: white wine 1 pint, celandine water 6oz, saffron 1dr, Venice treacle 3dr, bezoar stone 1sc, juice of goose droppings 6 spoonfuls. Make a sweating potion. Dose: 4oz on an empty stomach. Take for four days.

She used the following electuary in the evening:

℞: red and white sandalwood each 3dr, currants soaked in white wine then put through a sieve 4oz, rhubarb 1dr, saffron 1sc. Mix. Make the electuary. [Take] as much as a nutmeg.

For the stomach swelling:

℞: ointments, Agrippa’s 1oz, cyclamen ½oz, Martiatum 3dr, oils, of nard, rue, scorpions each 2dr, a little aqua vitae, some drops of vinegar. Make the ointment by the usual method.

She was cured, praise God, beyond her friends’ expectations.
Anginae, febris ardentis, linguae inflammationis cura.

Generosus Broade del Grange, angina praefocativa corripitur [...] deploratus, moribundus iacebat,186 a theologiis relictus, ab omnibus desertus; cum febre ardentis, linguae ardore et excoriatione, annos natus 42.

His incolmis evadit me sic opitulante:187

℞: decoctionis communis pro glisteribus lib. s, diacatholiconis, diaphaeniconis ana unc.i. Fiat glister: 4 sedes. Phlebotomia sublingua.

Gargarismus:
℞: mellis rosatum, aquae plantaginis et rosarum ana partes aequales, cum pauco olei vitrioli.

Linctus:

Phlebotomia neglecta, in febrem ut praedixi incidebat, ardentem continuam.

Potus ordinarius:
℞: liquiritiae, seminum anisi, ficuum, passularum solis ana unc. i.

Bulliant in lib. 4 aquae ad consumptionem lib. i. Sit potus ordinarius. Indies crevit febrem, vires delectae fuerunt, et dixit se

---

[Case 100] Cure of sore throat, burning fever, inflammation of the tongue.

Mr Broad, a gentleman of the Grange: seized by a choking sore throat. He lay incurable, despaired of, abandoned by ministers, deserted by all, with a burning fever, hot and excoriated tongue. Aged 42.

He escapes unharmed, with the aid I bring:

℞: the common decoction for enemas ½ pint, diacatholicon, diaphoenicon each 1oz. Make an enema: four stools. Venesection beneath the tongue.

A gargle:

℞: rose honey, plantain and rose waters each equal amounts, with a little oil of vitriol.

A linctus:

℞: liquorice, hyssop syrups each 3oz, oxymel of squills ½oz, rose honey 1oz. Mix. Make the linctus. Use it after the gargle. I prescribed /84/ a plaster of wormwood wine and pork fat, to apply to the throat. Moreover, I prescribed venesection but he refused. I feared his imminent death. As venesection had been rejected, he fell into a continual burning fever as I foretold.

His ordinary drink:

℞: liquorice, anise seeds, figs, raisins each 1oz. Boil in 4 pints water until 1 pint is gone. This should be his ordinary drink. Day by day the fever increased, his strength was destroyed, and he declared that he could not survive.

---

vivere non posse.

Nuntium pro me sudante equo misit nam *CELERITAS IN DESIDERIO MORAE*.\(^{188}\) Me nuntio veniente, inveni cum in mortis periculum, vocem emittere nequit. Statim venam secabam et phlebotomabam ad unc. 10. Vox reddit, et dixit se magnum levament venae sectione invenire. Eadem die hora somni iulapium nostrum antifebricum dabam. Nox alis longe quietior.

Potus ordinarius decoctio cornus cervi, et a metu suffocationis et febris liberatus, et recte convaluit nutu Dei, qui sit benedictus et *QUI SOLUS MIRABILIA MAGNA FACIT*.\(^{189}\)

---

[Case 101] Tussis gravissimae cura. 1621.

Generosa Sadler, tussi gravi et spirandi difficiitate laborat, cum fastidio cibi, aetatis 60.

℞: pilularum de succino, cochiarum ana sc.i, rhabarbari pulverizati sc.s. Fiant pilulae cum satis quantum oxymellitis squillitici: 17 sedes.

Linctus:

℞: lohoch sani et experti, de pulmone vulpis ana unc.i, syrupi liquiritiae, tussilaginis ana unc.i, oxymellitis scillitici dr. ii. Fiat linctus. *Liquiritiae radice modice tusa utatur*.\(^{190}\)

Hora somni teneat in ore pilulam unam in hac forma compositam:

---

He sent me a messenger on a hard-ridden horse, for *in desire*, *swiftness is delay*. After the message reached me, I found him in danger of death, unable to say anything. Immediately I cut a vein and bled to 10oz. His voice returned, and he said that he found great relief in the venesection. The same day I gave our antipyretic julep before sleeping. That night was more peaceful than others.

His ordinary drink was hartshorn decoction, and he was freed from fear of choking and fever. He recovered well, by God’s will who should be blessed, and *who alone doeth great wonders*.

---

Case 101 | Cure of very severe cough, 1621.

Mrs Sadler, a gentlewoman, suffers from severe cough, difficulty in breathing and aversion to food; aged 60.

℞: oxymel of squills 2dr, syrup of violets ½oz, chymical cup 2dr.

Mix: seven vomits, twelve stools. She is very much relieved.

℞: pills - amber, cochiae, each 1sc, powdered rhubarb ½sc. Make pills with sufficient oxymel of squills. Seventeen stools.

A linctus:

℞: lohochs - sanum et expertum, of fox lungs each 1oz, liquorice and coltsfoot syrups each 1oz, oxymel of squills 2dr. Make the linctus. *Take it with a moderately bruised liquorice root.*

Before sleeping hold a pill in the mouth, made in this way:

---

1 He...delay| S.O.: I was sent for speedily. 11 Case 101| S.O.: Observ. V [Second Century], pp. 89-90.
℞: succi liquiritiae dr.ii.s, farinae amyli dr.i.s, croci, myrrhae ana sc.i.s, opii gr.iii, styracis calamitae dr.iii, syrupi violarum quantum satis. Fiant pilulae, detur sc.i sub ingressum lecti.¹⁹¹

Atque sic Deo auxiliante per unicam septimanam convaluit.

[Case 102] Fluxus ventris per tres annos
durantis cura.  

Generosa Broune, ivencula, optimo corporis habitu praedita, tres totos annos fluxu ventris aquoso maxime nocturno (nam ad minus 6 vel 7 sedes noctibus singulis habuit) correpta et ad extremum periculum ducta, cum ingenti virium defectione torminibus et insomnis, cum pertaesa mali.

Meis praeceptis obtemperare dicit, sic:
℞: pilularum de succino dr.s, rhabarbari optimi pulverizati dr.i.

Cum syrupo de stoechode fiant pilulae 7, ex quibus 8 sedes.
℞: sarsaparillae, corticis ligni sancti ana unc.ii, sassaphras unc.i, guaiaci lib.s, seminum coriandri praeparatorum unc.iii.

Contundantur et decoquantur in aquae fontanae lib.14, ad medietatis consumptionem. In fine decoctionis adde cinamomī contusi unc.4. De hac decoctione sumatur haustus iii quoque die, videlicet in aurora calide et hora 4 pomeridiana, et tunc bibat frigide, et hora cubitus frigide. Ex faecibus, fiat secunda decoctio.  

Caput muniatur tegmentis quae vaporentur hoc suffitu.  
℞: nigellae Romanæ, styracis calamitae, benzoini ana unc.iii, macis, caryophilli ana dr.i. Fiat pulvis grossus pro suffitum.
℞: foliorum salviae, maioranae, stoechados ana M.s, seminum anisi,

¹⁹¹Bruele, Praxis medicinae, p. 173.
℞: liquorice juice 2½dr, wheat flour 1½dr, saffron, myrrh each 1½sc, opium 3gr, dry styrax 3dr, sufficient syrup of violets. Make pills. Give 1sc before going to bed.

And so she recovered in a week, with God’s help.

[Case 102] Cure of loose bowels lasting for three years.

Mrs Browne, a young gentlewoman, endowed with very fine condition of her body: has for three years been in the grip of a watery flow of the bowels mostly at night (for she had at least six or seven stools every single night). She has been led into extreme peril with great loss of strength, and with torments and sleeplessness, though wearied by her troubles.

She promises to comply with my instructions, as follows:

℞: pills - amber ½dr, best powdered rhubarb 1dr. Make 7 pills with French lavender syrup, resulting in eight stools.

℞: sarsaparilla, guaiacum bark each 2oz, sassafras 1oz, guaiacum ½ pint, prepared coriander seed 3oz. Crush and boil in spring water 14 pints, reduce to half. At the end of the boiling add crushed cinnamon 4oz. Drink 3 draughts of this decoction each day, that is to say at dawn hot, then at 4 o’clock drink cold, and at bedtime drink cold. Make a second decoction from the dregs.

Cover the head with cloths, which are suffused with this fumigant:

℞: Roman coriander, dry styrax, benzoin each 3oz, mace, cloves, each 1dr. Make a coarse powder for fumigation.

foeniculi, cumini ana unc.ii. /86/ baccarum lauri contusarum unc.s,
millii lib.i, salis communis lib.s. Torrefiant omnia in sartagine,
reponantur in sacculis, qui calidissime adhibeantur capiti et cervici,

\textsuperscript{193}Ruland the Elder, \textit{Centuria III'}, \textit{Curationum [...] centuriae}, p. 226.

\textsuperscript{9} 1628] in margin
℞: flowers of sage, marjoram, French lavender each ½ handful, seeds of anise, fennel, cumin each 2oz, /86/ bruised bayberries ½oz, millet 1lb, common salt ½lb. Parch everything in a frying pan, store in bags. Apply them very hot to the head and neck until they cool by themselves. After that she is to use the above fume.

These freed her from a most savage and deadly illness. To God the highest and most merciful alone be praise.

[Case 103] 1628. Cure of scurvy with associated symptoms.

Mrs Mary Talbot, a gentlewoman, sister to the Earl, Roman Catholic, modest and well-conducted: weighed down by these and many other symptoms: splenic swelling, erosion of the gums, livid spots on the legs, lower backache, convulsions of the jaw, tightening and paralysis of the tongue. People are ignorant of the nature of the disease, even the doctor in Salisbury, learned and experienced in other illnesses.¹⁹ I was treating the Countess at that time. She asked me to visit her sister, taking me into a darkened room. I found the pulse uneven and small, the urine turbid and thick.

While I was considering the above symptoms, the Countess asked my opinion on her life. I replied that I should not despair. I said that she suffered from long-standing, established scurvy. The Gentlewoman replied that she had been cured in the Archduke’s

¹⁹Dr Nathaniel Wright M.D. practiced in Shrewsbury about this time; Raach, A Directory of English Country Physicians, pp. 95, 113.
peius. Dixi et numeravi plura signa, et natura morbi, cum radices altas aegerit anno sequenti pullullare, neque cura difficilis sed longa, missis aliis medicinis. Libenter meum, sequenter consilium.

Imprimis hoc statuere oportet /87/ requiri perseverantiam et tolerantiam. Exiguo enim tempore nihil fit. Idcirco si curari vult, opus est pertinaci perseverantia, fidelis obedientia et patientia singulari, si tardet aut desperet nullum habebit effectum. His concessis, in nomine Dei curam suscepi felicem.

Imprimis corpus purgatum pilulis Ruffi et tartari vitriolati. Usa in cibo sale cochleariae, in iusculo sale absinthii. Potus omni alio interdicto, sequens fuit:

palace in the Low Countries two years previously, but now it was much worse. I described and enumerated the many signs and the nature of the disease, which sends out shoots from deep roots in the following year. Nor is the treatment difficult but it is prolonged, requiring other medicines. I willingly gave the following advice.

*First it is essential to establish [87] that perseverance and fortitude is required, for nothing comes in a short time. Therefore, if she wishes to be cured, steadfast perseverance, faithful obedience, and unusual patience is required. If she delays or despair, nothing will have an effect.* Once she agreed to this, I undertook the happy cure in the name of God.

Her body was first purged with Ruffus’s pills and vitriolated tartar. She used scurvy grass salt in food, wormwood salt in broth. Her drink was the following, all others being forbidden:

℞: garden scurvy grass 4 handfuls, watercress, brooklime each 2 handfuls, bruised juniper berries 1 handful, wormwood ½ handful. Boil in sufficient new beer, reduce to 4 gallons. Make beer by the usual method. After fourteen days it was ready for drinking. She took a draught in the morning. She is to take exercise for an hour, then swallow electuary of scurvy grass flowers, as much as a nutmeg. She did this for six days.

She could walk a mile, for she went to the house of her relative, Winter. I was there, and she thanked me greatly, and said she had walked three miles. She digests food well, and from being

---

2 I...5 | S.O. omits. 6 First...11 God] S.O. omits. 17 by the usual method] S.O. omits. 22 She...101.1 Three] S.O.: Afterward she began to walk, and at last was very well.
[Case 104] Scorbūti confirmati
in sene cura.

Generosus Hanslope, circa aetatis annum 61, de angustia pectoris, difficultate anhelitus, siti, icteritia citrina, tumoribus duris femoris lividis et nigris, retractione poplitis (ut sine baculo ire non potuit) appetitu prostrato et vomitu conquestus. /88/ Inveni pulsum parum, ut vix moveri sentiebam, urinae variae fuerunt, modo tenues, die sequenti citrinae absque sedemento.

Ventrem habuit lubricam:

℞: electuarii diacatholiconis, electuarii ventriflui Solenandri 
ana dr.ii, confectionis Hamech dr.s, pulveris senae, 
cremoris tartari ana sc.s. Cum saccharo fiat bolus.

ex quo sedes vi, sed ita imbecillis ut deliquium animae passus.197

Die sequenti:

℞: cornu cervi praeparati, rasurae eboris ana dr.i, pulveris lumbricorum dr.iii, (optīmi habentur in scorbuto), conservam berberiarum quantum satis. Fiat electuarium molle. Capiat quantitatem avellanae.

Postea capiat coch.sex sequentis vini:

℞: vini absinthii unc.4, syrupi sceletyrbici Forresti unc.ii.

Femori tumido et livido, iubebam bis in die pannis calidis duplicatis fomentare:

---

197Sennert, De scorbuto tractatus, p. 159: ℞ electuar. diacatholic. unc.s, confect Hamech dr.s, pult. fol. senae, crem. tartari an. sc.s vel sc.i. Cum saccharo f. bolus.
weak has become strong. Praise [God], the One and Three.

[Case 104] Cure of established scurvy in an elderly man.

Mr Hanslap, a gentleman about 61 years old: complained of constriction of the chest, troublesome shortness of breath, thirst, yellow jaundice, hard, livid and black swellings on the thighs, contraction of the knees (so that he could not walk without a stick), loss of appetite, and vomiting. /88/ I found the pulse small, so that I hardly felt it move. Urine: variable, first thin, the next day yellow without sediment.

He had unsettled bowels:

℞: diacatholicon electuary. Solenander’s opening electuary each 2dr,20 Hamech confection ½dr, senna powder, cream of tartar each ½sc. Make a bolus with sugar. This resulted in six stools, but also with weakness so that he suffered from faintness.

The next day:

℞: prepared hartshorn, ivory shavings each 1dr, powder of worms 3dr, (held to be very good in scurvy), sufficient conserve of barberries. Make a soft electuary. Take as much as a hazelnut.

Afterwards take six spoonfuls of the following wine:

℞: wormwood wine 4oz, Foreest’s scheletyrbic syrup 2oz.

The thighs were swollen and livid, so I ordered them to be fomented twice a day with hot folded cloths.

---

20 Opening: Hall’s word, *ventriflatus*, is an adjective here rather than part of the name. The electuary is possibly that in Solenander, *Consiliorum* [...]*Solendr*, p. 222. See p. /199/ for a related recipe.

℞: becabungae M.ii in cervisia coctae (vide Eugaleno folio 27).

Iis finitis:
℞: novem lumbricos praeparatos, in mortario contusos cum ii cochlearis vini, per pannum expressos. His addatur dimidia vini mensura. Sumatur cochlearia iii mane et miridie et vesperi.\textsuperscript{199}

Traiiciantur lumbrici terrestres, circulis in collo rubris (vel ut aliis vult, cum singulis rubeis in collo) insigniti, vino prius abluti ter simul et semel una vice.\textsuperscript{200} Medicina composita, cui addebam vini lib.ii usque ut supra.

sassaphras root 2oz. Boil by the usual method in 5 gallons new beer, reduce to 4. Add flowers of yeast as is the practice, and save in a small barrel. Drink without break after the fourteenth day.

For contraction of the knees:

℞: juice expressed from scurvy grass leaves 1oz, oils of St John’s wort, mullein, elder each ½oz. Boil until the juice is used up. With the expression mix tacamahacca powder 1½dr, Indian balsam 4sc. Make on a slow fire stirring carefully, at the end add a little wax.

He had this cordial electuary:

℞: scurvy-grass conserve 2oz, wormwood, Horst’s diasereos, bugloss, clove-gillyflowers, damask roses, preserved elecampane root each ½oz, rosewood, sweet flag, prepared arum root, diarrhodon Abbatis powder, diapleres archonticon, alkermes confection each ½dr. Make the electuary with Foreest’s scheletrbic syrup. Dose: as much as a bean.

I applied the following poultice to the hard swelling:

℞: sufficient powdered common wormwood, which should be mixed to the consistency of a poultice with eggs freshly laid the same day, with the white, yolk /90/ and the shells broken and finely powdered. Apply cold to the swelling. Its effect was marvellous and

7 Indian balsam] S.O. balsam of Peru.
mirabile et magna laude canit.

Tumor sublatus, contractionem inungit hoc unguento:
℞: unguenti dialtheae, olei chamaemelli, de castoreo, olei
lumbricorum ana unc s, medullae crurum vitulae, olei lini ana

5 dr.iii, suci raphani, cochleariae, nasturtii ana unc.s. Cum satis
quantum cerae et ammoniaci solutione fiat linimentum. Optime
levatus.

Mali i:
℞: unguenti dialtheae unc.s, liliorum alborum, chamaemelli, anethi

10 ana dr ii, granorum iuniperi contusorum sc.i. Fiat unguentum.
℞: electuarii chalybeati unc ii, conservarum absinthii, cochleariae
ana unc.i. Misce. Detur dr.iii stomacho ieiuno.

His rite curatus, equitare ambulare potuit, et dixit se perfecte
curari.

[Case 105] Palpitationis cordis cura.

Domina Puckringe, palpitatione cordis saepe cruciata.
℞: diambrae, diamoschu dulcis, aromatici rosarum ana dr.ii,

20 confectionis alkermes dr.i, diacoralli dr.i, theriacis magnae,
Mithridatii optimi ana sc.ii, conservae buglossi, cochleariae
(quoniam habuit scorbutum) ana unc.i. Misce. Fiat electuarium.
Dosis quantitas avellanae.

Liberata.

Generosa Iremonger pedissequa eius curabam /91/
sequentibus, a palpitatione et tremore cordis.
he sang its praises.

When the swelling had subsided, I anointed the contraction with this ointment:

℞: marshmallow ointment, oils of chamomile, castor, worms each ½oz, veal marrow from the shinbone, linseed oil each 3dr, radish, scurvy grass, watercress juices each ½oz. Make a liniment with sufficient wax and ammoniac solution. He was very much alleviated.

1 May:

℞: ointments of marsh mallows ½oz, white lilies, chamomile, dill each 2dr, crushed juniper seeds 1sc. Make the ointment.

℞: steeled electuary 2oz, wormwood and scurvy grass conserves each 1oz. Mix. Give 3dr on an empty stomach.

He was properly cured, could ride and walk, and declared himself entirely cured.

[Case 105] Cure of palpitations of the heart.

Lady Puckering: often tortured by palpitations of the heart.

℞: diambra, sweet diamoschu, aromatic rose [powder] each 2dr, alkermes confection 1dr, diacorallion 1dr, Venice treacle, best Mithridate each 2sc, bugloss and scurvy-grass conserves (because she had scurvy) each 1oz. Mix. Make the electuary. Dose: as much as a hazelnut.

Freed.

I cured Mrs Iremonger, a gentlewoman, her companion, /91/ of palpitations and tremor of the heart with the following:

℞: castoreii dr.i, radicis diptami dr.s (quoniam menstrua non rite
fluebant) diambrae, diamoschu dulcis, speciei aromaticum rosarum
ana dr.ii, theriacis magnae, Mithridatii optimi ana sc.ii, conservae
buglossae unc.i. Cum syrupo arthenitia quantum satis fiat opiata.

Dimidiam huius tantummodo accipiebat et liberata, etiamsi
diu antea gravata, et dixit electuarium auro dignum, et me
assignare ut aliis quoque prodessem. Curavit et saepe mihi
ingentes reddebat gratias.

[Case 106] Scorbuti cura experta.

Domina Broune de Radforde, his symptomaticis scorbuticis
oppressa: ventris constipatione, melancholia, vigilia, somnis
turbulentis, menstruorum obstructione. Per annum durante, iis
obstructis misere ventris torminibus, flatuosis cruciata, tumoribus
ventris instar pugni maxime circa lienem. Crepitu a torminibus
liberata. In orificio stomachi palpitationem continuam sentit, et
manu adhibita facile discernitur, ut verbis eius uter, as theare
weare some live thinge leaped in hir belly.

Haec omnia ex morte filiae charae, /92/ formosa et religiosa
accidebant, quae vitam (anno ab hinc) cum morte mutavit in
puerpera et placide cum Domino dormit.

His infrascriptis remediis curata, et ab omnibus
symptomatibus liberata:

℞: foliorum cochleariae recentium, nasturtii aquatici, becabungae,
capillorum veneris, ceterachi ana M.ii, scabiosae, scolopendrii ana
℞: castor 1dr, Cretan dittany root ½dr (because her periods were not flowing properly), diambra, sweet diamoschu, aromatic rose powder each 2dr, Venice treacle, best Mithridate each 1sc, bugloss conserve 1oz. Make an opiate with sufficient mugwort syrup.

She took only half of this and was freed, although she had been weighed down with it for a long time before. She said the electuary was worth gold, and rewarded me so that I might help others as well. It cured her, and she thanked me greatly.

[Case 106] Proven cure of scurvy.

Lady Browne of Radford: overcome by these scorbutic symptoms: constipation of the belly, melancholy, sleeplessness, disturbed dreams, obstructed menstruation. She has been wretchedly tortured by these obstructions lasting a year, with windy abdominal colic and a swelling like a fist, maximally around the spleen. She was freed from the torments by passing wind. She feels a continuous palpitation at the mouth of the stomach. She feels it easily by applying a hand, in her own words, ‘as theare weare some live thinge leaped in hir belly’.

All this all arose from the death of her beloved, /92/ beautiful and devout daughter, whose life (a year previously) changed to death in childbirth, and she sleeps peacefully with the Lord.

The remedies below cured and freed her from all symptoms:
℞: fresh leaves of scurvy-grass, watercress, brooklime, maidenhair,

M. s. florum cordialium ana p. i. radicis glycyrrhizae rasae dr. vi.
foliorum senae unc. i. rhabarbari. corticis radicis capparum, corticis
mirabolans Indorum praeparati ana sc. 4. tartari cristalli dr. ii. uvarum
passarum exemptis arillis dr. x. hordei mundi p. i. squinanthi sc. i.

Decoquantur in satis quantum aquarum absinthii, agrimoniae,
fumariae, pro lib. i et unc. 4. et post ebullitionem manent infusa per
noctem. Colatae adae syripi sceletyrbici Forrestii unc. ii.
diaserios, syripi rhabarbari unc. i. Misce cum dr. ii aquae
cinamomi. Dosis coch. 7. ex quibus sedes vi. Postea, ceratum de
ammoniaco Foresti ad regionem lienis, quod ad tumores discutiendos
convenientissime latere dolente applicatur. Probatum.

/ 93/ Etiamsi rite purgata, attamen dolore ventris scorbutico

perturbatione, et pingui earundem superficie de sceletyrbe

spleenwort each 2 handfuls, scabious, hart’s-tongue fern each ½ handful, the cordial flowers each 1 pinch, shaved liquorice root 6dr, senna leaves 1oz, polypody of the oak 6dr, rhubarb, bark of caper roots, prepared Indian myrabolans bark each 4sc, tartar crystals 2dr, stoned raisins 10dr, wheat barley 1 pinch, lemongrass 1sc. Boil in sufficient wormwood, agrimony and fumitory waters for 1 pint 4oz, after boiling stand to infuse overnight. To the strained liquid add Foreest’s scheletryrbic syrup 2oz, diasereos, rhubarb syrup each 1oz. Mix with 2dr cinnamon water. Dose: 7 spoonfuls, resulting in six stools. Afterwards, apply Foreest’s ammoniac salve to the area of the spleen, because it is very suitable for removing swelling from a painful side. This has been proved.

/93/ Even though rightly purged, she was attacked by scorbutic abdominal pain. See Sennert page 95 and Eugalenus page 62 for the cause of this. You will find the differences from colicky pain on pages 93 and 94 of Sennert, and pages 603 and 638 in the same book.

After purging the urine was confused, and the varieties of sediment were separated, with continuing disturbance in the urine above. These, with the greasy surface, were a warning of scurvy.

14 See...17 book]
18 After...separated] Perhaps due to faecal contamination from the purging.
20 with the greasy surface were a warning of] S.O. omits.
Adde bireae fumariae M. ii, in aliis ut pro Generoso Hanslap.

Item: Haemorrhoides apperientur sanguisugis. Postea utetur electuario ut pro Generoso Hanslap folio /88/.

Usu horum a scorbuto *liberatus, et ad integram sanitatem pervenit*, virtute Divina.212

[Case 107] Vertiginis, capitis doloris et surditatis cura.

Generosa Murden, circa aetatis annum 59, de levi vertigine, capitis dolore et surditate conquesta. A me ita cito curata:

His usa pilulis felici successu et *has multis laudibus extollere non desit, mihiique, ut anotarem, ea urgete occasionem dedit*, et iterum pro praeservatione habere desiderat.214

[Case 108] */94/ Fluxus ventris et flatus cura.*

Generosus Gorgius Underhill circa aetatis annum 64; fluxu

---

Add 2 handfuls of fumitory to the beer, otherwise as for Mr Hanslap.

ALSO: the haemorrhoids will be removed with leeches. After that she is to use the electuary as for Mr Hanslap. page /88/.

She was freed from scurvy by using these and returned, by divine power, to complete health.

[Case 107] Cure of giddiness, headache and deafness.

Mrs Murden, a gentlewoman about 59 years old: complained of slight giddiness, headache and deafness. I cured her quickly in this way:

℞: aloes rosatae 1dr, powdered rhubarb sprinkled with cinnamon water 2sc, freshly trochischated agaric 1sc, mastic, myrrh each ½sc.

Make 25 pills with betony syrup. Dose: 5 pills an hour before dinner.

27 April 1626.

She used these pills successfully, and did not cease extolling them with great praise, and by her urging gave me occasion to make a record of that. She also asked to have them for prevention.

immoderato ventris debilitatus, et flatu misere lancinatus, ex esu halicis.

℞: electuarii ventriflui dr. vi, tartari cremoris sc. i, rhabarbari pulverizati sc. ii. Cum saccharo fiat bolus: sedes 9 cum levamine. Hora cubitus:

℞: diascordii dr. i, aquae scabiosae unc. iii, syrupi limonum unc. i, syrupi papaveris unc. s. Misce. Capiat rasuram cornu cervi bis in die quietis.

Pro stomacho:

℞: conservae rosarum rubrarum unc. ii, speciei aromatici rosati Gabrielis dr. i, caryophyllorum incisorum dr. s, ambrae griseae gr. iii. Misce cum corticibus citri. Sumat mane quantitatem castaniae. Post pastum tragea sequenti:

℞: coriandri praeparati, seminum foeniculi, anisi, carvi ana sc. ii, cornu cervi praeparati, coralli rubri praeparati, cinamomi, nucis moschati ana sc. i, speciei aromatici rosati, laetificantis Galeni ana sc. s, sacchari rosati tabellatas ad pondum omnium. Gestet scutum nostrum stomachale.

Sic rite curatus.

[Case 109] Seminis fluxus, nocturnae pollutionis cura.

Generosus praedictus anno sequenti, pro fluvio seminis nocturno debilitatus, sed mox ad sanitatem reddiit, sequenti

---

3 tartari |
unrestrained loose bowels and wretchedly attacked by wind due to eating gruel.

℞: ventrifluus electuary 6dr, cream of tartar 1sc, powdered rhubarb 2sc. Make a bolus with sugar: nine stools with relief.

At bedtime:

℞: diascordium 1dr, scabious water 3oz, lemon syrup 1oz, poppy syrup ½oz. Mix. Take hartshorn shavings twice daily on the quiet days.

For the stomach:

℞: red rose conserve 2oz, Gabrieli's aromatic rose powder 1dr, sliced cloves ½dr, ambergris 3gr. Mix with citron peel. Take as much as a chestnut in the morning.

After food, the following sweetmeat:

℞: prepared coriander, seeds of fennel, anise, caraway each 2sc, prepared hartshorn, prepared red coral, cinnamon, nutmeg each 1sc, powders, aromatic rose, Galen's laetificans each ½sc, rose sugar tablets to the weight of everything. He should wear our stomach shield.

He was thus properly cured.

[Case 109] Cure of seminal discharge, nocturnal emission.

The above Gentleman had been weakened by nocturnal seminal emissions the previous year, but soon returned to health when I

---

21 See Appendix B: New Patient Identifications.

curatione per me adhibita:\textsuperscript{215}

℞: pulpae cassiae dr.vi, pulpae tamarindorum dr.ii, coralli rubri, mastich ana sc.i.s. Fiat bolus cum saccharo. Rite purgatus.

Postea:

pilulas tres, deinde pilulam unam perplures dies mane, et usus lacte chalybeato.\textsuperscript{216} Dorso bracteam plumbi tenuissimam sed latam, gestet supra renum regionem.

His cito, tuto curatus.

[Case 110] Fluxus alborum, gonorrhoea.

Generosa Kenton Northampton, aetatis 48, alborum fluxu debilitata et discolorata.

℞: terebinthinae Venetiae limpidae unc.s. Dissolvatur cum vitello ovi ut artis est. Addendo mellis purissimi unc.i, sacchari rosati tabellati unc.ii, vini generosi unc.vii. Misceantur. Bibat de lacteo illo liquore ad unc.i omni die, cuius operationem ad vesicam usque et ultra pertingere ex urinae violaceo odore deprehenditur.\textsuperscript{217}

\textsuperscript{215}Ruland the Elder, ‘Centuria VIII’, Curationum centuriae, p. 566: Deo [...] adiuvante mox ad sanitatem rediit optime [see also p. /179/]. \textsuperscript{216}Rodrigo de Castro, De universa mulierum medicina, p. 66: pilulae insuper probatissimae in hunc modum parantur, gummi arabici, tragacanti, Karabes, mumiae, boli armeni, mandibuli lucii piscis an dr.s. In pulverem subtilem redigantur, et cum syrapi myrthino vel de rosis siccis fiant pilulae singulae ponderantes scr.i. Capiet prima vice tres, deinde singulis diebus unam. \textsuperscript{217}Platter, Observationum libri tres, p. 770: R resinae illius limpidae unc.s dissolvatur in vitello ovi, ut artis est, addendo mellis puri unc.i sacchari ros. tab unc.ii. Vini generosi unc.vii misceatur. Bibat de lacteo illo liquore ad unc.i alternis diebus, cuius operationem ad vesicam usque et ultra pertingere, ex urinae violaceo odore deprehendit potest.

\textsuperscript{2}pulpa\textsuperscript{e} pul. [This abbreviation is usually for pulvis, but pulpa is written in full in the previous line, and is commonly used with tamarinds].
applied the following cure:

℞: cassia pulp 6dr, tamarind pulp 2dr, red coral, mastic each 1½sc.

Make a bolus with sugar: rightly purged.

Afterwards:

℞: gum Arabic, tragacanth, carabe, mummy, bole Armeniac, pike’s jaw each 2sc. Powder and make pills weighing 1sc with syrup of dried roses or myrtle. Take for the first dose three pills, then one pill in the morning for several days and use steeled milk. He is to wear very thin broad lead sheets on his back, over the renal area.

These cured him quickly and completely.

[Case 110] Flux of the whites, gonorrhoea.

Mrs Kenton, a gentlewoman of Northampton aged 48: weakened and discoloured by a flux of the whites.

℞: clear Venice treacle ½oz. Dissolve in egg yolk by the rule of practice. Add the most refined honey 1oz, rose sugar tablets 2oz, good wine 7oz. Mix. Drink up to 1oz of the milky liquid every day.

The effect of this is detected reaching up to and beyond the bladder by the smell of violets in the urine.

---

Sit potus ordinarius tempore sumendi potionem praedictum sequentem:

℞: aquam hordei cum malva et licoritia.

Utetur bolo sequenti:

5 Faictes un bol de demie dracme d’encens blanc, autant de bol Armene et de terre sigillée. Le tout pulverisé subtilement et incorporé avec deus blancs d’oeufs frais. C’est chose admirable et secret si en usez plusieurs jours six heures avant manger.²¹⁸

Sit potus talis:

℞: rasurae ligni guaiaci lib.i, corticis euisdem contusi unc.4. 

Macerentur octiduo in lib.8 aquae fontanae cum dr.ii olei sulphuris, in fimo aequino in vase vitreo capaci, cera et sulphure prius bene obturato. Cola, in colatura novum lignum reassunde ut in eodem vase, et fimo macera triduo, et cola ut pris. colatura ad libitum /96/ per cohobationem purificatur, item edulcoretur et aromatizatur, prout postulat necessitas et aegri natura. De simplici colatura, neque purificata, neque edulcorata, et aromatizata, dantur unc.2 vel 3 vel 4 pro viribus aegrae. Huius decocti tanta vis est et energia, ut unc.ii alterius decocti lib.i aequent. Picrocholis et lienosis icteritiae confirmata tuto est, hydropo et Gallico morbo confectis medetur, apoplecticis, et altis gravissismis capitis morbis succurrat. [...] Ex magmate, secundum decoctum potest praeparari, addita aquae

²¹⁸Liébaut, Thresor des Remedes Secrets, p. 392: faictes un bol de demie dracme d’encens blanc, autant de bol armene et de terre sigillée: le tout pulverisé subtilement et incorporé avec deux blancs d’oeufs frais: c’est chose admirable et secrette, si en usez plusieurs jours six heures avant manger.
Her ordinary drink while taking the above potion should be the following:

℞: barley water with mallows and liquorice.

Take the following bolus:

Make a bolus with olibanum ½dr, also bole Armeniac and sealed earth. Powder everything finely and mix with the white of two fresh eggs. This is something admirable and secret if used for a few days, six hours before eating.

Her drink should be of this sort:

℞: shavings of guaiacum wood 1lb, bruised bark of the same 4oz. Soak for eight days in 8 pints spring water with 2dr oil of sulphur. Clarify with horse droppings in a capacious glass vessel, well stopped earlier with wax and sulphur. Strain. Put new wood in the strained liquid as in the vessel, soak with the droppings for three days. Purify the strained liquid as you wish by double distillation, also sweeten and flavour as necessity and the nature of the illness demand. Give the simple strained liquid, neither purified nor sweetened nor flavoured, 2 or 3 or 4oz depending on the strength of the patient. This decoction has so much strength and efficacy in 2oz that it is equal to 1 pint of any other. It is entirely proved in yellow choler and splenic jaundice, cures dropsy and the French disease quickly, and helps with apoplexy and other very severe illnesses in the head. From the dregs a second decoction can be

---

1 Her ordinary drink| S.O. she drank her ordinary drink warm.  5 Make...8 eating| In French in the MS.  7 admirable and secret| S.O. This is an admirable secret. [In the absence of any indication that these were not Hall's words (S.O. omits the attribution to Liébaut) this has caused some confusion. Dr Bird, in his introduction to Cooke, said that the manuscript 'was intended by the author not to be published till his decease, when men more willingly part with what they have' (Select Observations, 1st ed., f.b4.v). Lane, John Hall, p. 199, in turn wrote that 'Hall reported on the use of two medicines which he may have numbered among those he would not have wished to be made public during his lifetime.'
quantitate sufficienti. Eius usus erit in mensa, loco potus.\textsuperscript{219}

Malexentur omnia simul cum oleo myrtilli, fiat emplastrum, cuius portio extensa supra alutam admoveatur lumbis et ossi sacro, altera imo ventri et gestetur inter duas purgationes menstruas qua adventante auferatur.\textsuperscript{220}

His rite curata.

\textbf{[Case 111] Scorbuti lipothymiae cura.}

Generosa Delaberre de Southam iuxta Glosterem diu aegrotabat cum fastidio cibi, nunc hunc cibum summis /97/ in deliciis habet, mox respuit, urinae saepe mutatio, et quando in lecto bene se habet, cum surgit lipothymiam patitur.

\textsuperscript{12}Scorbuti lipothymiae\textit{ae} scorbuti \textit{animae} lipoth. \textsuperscript{13}diu\textit{]}\dive.
prepared by adding sufficient quantity of water. It was used at table in place of drink.

For the back: the plaster against ruptures, that for the womb each 1oz, comitissa ointment 2oz, mastic powder, dragon’s blood and white coral each 2dr, red roses 1 pinch, snakeweed root, oak moss each 2dr, sealed earth $\frac{1}{2}$dr. Soften everything together with myrtle oil. Make a plaster. Spread one part on a piece of leather to the lower back and sacrum, the rest though on the lower belly. Wear it from one menstrual period to another, then remove it.

She was properly cured.

[Case 111] Cure of scorbutic collapse.

Mrs Delabere, a gentlewoman of Southam near Gloucester: ill for a long time, with aversion to food. Sometimes she takes the greatest delight in food, at other times spits it out. The urine changes frequently and while she is well when in bed, she suffers a
Sequentibus curata:

℞: pilulae hierae cum agarico, Ruffi ana sc.ii, de succino, aggregatavo, tartari cremoris ana sc.i.s, oxymellitis scillitici quantum satis. Fiant pilulae 15, deaurentur. Capiat ii sero, mane iii, omni 3a die. Rite purgata.

Lieni: ceratum de ammoniaco Foresti unc.i, emplastrum de meliloto unc.s. Fiat emplastrum pro liene, et syndone rubra subducatur.

Die quietis:

℞: conservarum rosarum Damascenarum unc.i, conservae cochleariae dr.iii, conservae buglossi dr.ii, speciei pleres archonticonis dr.s, tartari cremoris, pulveris chalybis praeparati ana sc.ii, radicis aronis praeparatae sc.i, confectionis alkermes dr.i. Cum syrupi zingiberis quantum satis, fiat electuarium molle. Dosis sero quantitas fabae, mane nucis moschati ante surgit, sic per ii dies. Tertia die purganda pilulis praeparatis.

Longe melius se habuit, ita ut ambulare et equitare potuit.
Tunc Bathoniam se confert, ibi utetur sequenti decoctione cum e balneo exivit et in lecto sudet:

℞: scobis ligni guaiaci unc.iii, corticis eius unc.ii, sassaphras unc.i, chynae in tenuis orbiculis sectae unc.s, rasurae eboris dr.iii, liquiritiae unc.i, agrimoniae, cardui benedicti, cochleariae, nasturtii aquatici, becabungae ana M.s, summotatum fumariae, florum buglossi, stoechados, anthos ana p.i, nucis moschati, cinamoni ana dr.ii. Macerentur ad ignem per 12 horas in lib.12 aquae fontanae.

/98/ Mane coquantur ad dimidias, dein percolentur. Colatura

---

3 tartari[]? 20 scobis...112,1 mane] This is the recipe prescribed in Bath, not by Hall, so is an example of the use of a Latin source by another physician.
collapse when she gets up.

She was cured with the following:

℞: pills of hiera with agaric, Ruffus's each 2sc, amber, aggregative, cream of tartar each 1½sc, sufficient oxymel of squills. Make 15 pills, gild them. Take 2 in the evening, 3 in the morning, every third day. She was rightly purged.

For the spleen: Foreest’s ammoniac salve 1oz, melilot plaster ½oz. Make a plaster for the spleen, and cover it with fine red cloth.

On the quiet days:

℞: conserve of damask roses 1oz, bugloss conserve 2dr, pleres archonticon powder ½dr, cream of tartar, prepared steel powder each 2sc, prepared arum root 1sc, alkermes confection 1dr. Make a soft electuary with sufficient ginger syrup. Dose: the amount of a bean in the evening, of a nutmeg in the morning before rising.

Continue so for two days. On the third day she should be purged with the prepared pills.

She was much better, so that she could walk and ride on horseback. Then she went to Bath. There she used the following decoction when she left the bath, and sweated in bed:

℞: guaiacum wood chips 3oz, the same bark 2oz, sassaphras 1oz, china cut into thin disks ½oz, ivory shavings 3dr, liquorice 1oz, agrimony, blessed thistle, scurvy grass, watercress, brooklime each ½ handful, tops of fumitory, flowers of bugloss, French lavender, rosemary each 1 pinch, nutmeg, cinnamon each 2dr. Soak by the fire for twelve hours in 12 pints spring water. /98/ In the morning boil,

8 cover it with fine red cloth] S.O.: Spread it upon leather, and a red sarcenet upon it.
9 quiet days] S.O.: Those days she purged not.

282
dulcoratur saccharo. *Dosis unc. 4, hoc decocto utendum mane.*

Omni 4a die purgata his pilulis:

℞: pilulae hierae cum agarico, Ruffi ana sc. ii, ex quibus rite purgata.

Nullis aliis pharmacis usa, et sana domum reversa.

Laus Deo, liberata ab omnibus doloribus et symptomatibus, quorum *in hunc diem, Deo gloria, nullum deprehendit vestigium.*

---

[Case 112] Dysenteriae per iii menses

during [cura].

Iacobus Ballarde aetatis 60, fluxu sanguineo et spumoso, aliquando chyloso, per iii menses, et tenasmo lancinatus.

℞: hordei cum cortice p. i, seminum lini, foenugraeci conquassatorum ana unc. i, florum chamamaeillae, meliloti ana p. i, furfuris macri p. ii.

Fiat omnium decoctio ad lib. i. In colatura dissolve vitellorum ovorum N. ii, mellis rosati unc. iii, sacchari rubri unc. iii. Misce, fiat glister.

℞: philonii Persici sc. ii, aquae plantaginis unc. iii, syrupi cydoniorum unc. i. {Fiat potio quam sub noctis initium quum se in somnum daturus aeger esset dari iussi.} Nox quieta. Mirifice iuvari se a potione dicebat. Sedatur namque dolor et fluxio subsistebatur somnusque suavis obrepebat.
reduce to half, then strain. Sweeten the strained liquid with sugar.

Dose: 4oz. This decoction should be used in the morning.

She was purged with these pills every fourth day:

℞: pills - of hiera with agaric, Ruffus’s each 2sc, from which she was rightly purged. She used no other medicines, and returned home well.

She was freed, praise God, from all pains and symptoms, of which to this day, glory be to God, there remain not a trace.

[Case 112] [Cure of] dysentery of three months’ duration.

James Ballard aged 60: attacked by a bloody and frothy flux, sometimes chylous, for three months, and tenesmus.

℞: barley with husks 1 pinch, broken linseed, fenugreek seeds each 1oz, chamomile, melilot flowers each 1 pinch, rye bran 2 pinches.

Make a decoction of everything to 1½ pints. In the strained liquid dissolve 2 egg yolks, rose honey 3oz, brown sugar 3oz. Mix. Make an enema.

℞: philonium Persicum 2sc, plantain water 3oz, quince syrup 1oz.

Make a potion, which I ordered to be given at nightfall when the patients was going to sleep. The night was peaceful. He said he was helped amazingly by the potion. He was settled, for the pain and flux ceased, and sweet sleep crept up.

---

Postea clystere astringenti utetur. *Fluxionem ventris sistit et ulcus glutinat:*

℞: \[99\] summitatum rubi, plantaginis, portulacae, coriandrorum praeparatorum, cymini parum torrefactorum et conquassatorum ana unc.i, amyli torrefacti unc.s, gallarum, nucum cupressi grosso modo contritorum ana paria ii, furfuris p.ii. Fiat omnium decoctio in aquae chalybeatae ad lib.i. In colatura adde axungiae renum hirci liquefactae unc.i, boli Armeni praeparati dr.ii, succi plantaginis unc.4, mucaginis tragacanthae unc.i, mellis rosati unc.ii. *Misce, paratur* glister.\[^{226}\]

Ventri hoc admovi emplastrum:

℞: massae emplastri contra rupturam unc.iii, emplastri diaphaeniconis unc.ii, masticis, olibani, coriandri praeparati, boli Armeni praeparati, sanguinis draconis ana sc.4, lapidis haematitis dr.ii, succi plantaginis unc.4, vini rubri crassi unc.iii, olei myrtilli, olei cydoniorum ana unc.ii. Misce cum cera et terebinthina. *Manibus inunctis vino rubro crasso, fiat magdaleon, ex quo super alutam extenso emplastrum fiat, et ventri admoveatur.*\[^{227}\]

In tenasmum:

℞: myrrhae electae, croci, styracis calamitae ana dr.i, opii sc.i, bdellii, aloes ana gr.18, cerae citrinae liquefactae quantum satis. Fiat

Then he is to use an astringent enema. *It stops the belly’s flux and closes an ulcer:*

℞: /99/ tops of briars, plantains, purslane, prepared coriander, cumin dried a little and broken each 1oz, dried starch ½oz, galls, coarsely crushed cypress nuts two, both of adequate size, rye 2 pinches. Make a decoction with everything in steeled water to 1 pint.

To the strained liquid add liquefied fat of goat’s kidneys 1oz, prepared bole Armeniac 2dr, plantain juice 4oz, tragacanth mucilage 1oz, rose honey 2oz. Mix. Prepare the enema.

I applied a plaster on the belly:

℞: a mass of plaster against ruptures 3oz, diaphoenix 2oz, mastic, olibanum, prepared coriander, prepared bole Armeniac, dragon’s blood each 4sc, haematite stone 2dr, plantain juice 4oz, rough red wine 3oz, myrtle oil, quince oil each 2oz. Mix with wax and turpentine. Make a roll with hands wetted with rough red wine, from which make a plaster spread on thin leather, and apply to the belly.

For the tenesmus:

℞: choice myrrh, saffron, dried styrax each 1dr, opium 1sc, bdellium, aloes each 18gr, sufficient liquefied yellow wax. Make suppositories.

---

5 two both of adequate size] each iv.

Place one in the anus. He had one of these a day.

The philonium drink was repeated as above, and the astringent electuary:

℞: prepared bole Armeniac powder 4sc, selected pearls, red coral washed 2sc, new rose powder, diarrhodon Abbatis powder each $\frac{1}{2}$dr, comfrey conserve, preserved citron peel each 1dr. \[100/\]

Expand with sugar dissolved in rose water. Make the electuary in small cubes weighing 2dr. I prescribed one to be eaten at dawn, the other before supper. I prescribed some grains of clear olibanum to be taken now and then, before food.

I prescribed thin food, restrained and drying and with these, by the will of God, he recovered beyond his friends’ expectations.

NOTE:

If there is good digestion but not separation, then dysentery is present.

If there is separation and not digestion, then it is a lyentery.

If neither separation nor digestion, then diarrhoea is present.

If putrefaction of the stomach contents is present, then there is a flux of the belly with various colours.

[Case 113] Cure of scorbutic epilepsy.

---

1 He had one of these a day] S.O. omits. 21 Case 113] S.O.: Observ. XVII [Second Century], pp. 102-103.
Generosa Laiton, ex nobile stirpe nata, epilepsia scorb utica diu laboravit. Primum quod semper cum febre hi motus convulsivi incidunt, cetera signa quaere Eugalenum folio 86,\textsuperscript{232} et Senertum folio 620.\textsuperscript{233} Paroxysmo ingruente, misere frigore et horrore membrorumque concussione divexata per dimidiam horam, ita ut totum lectum quassavit. Durat paroxysmus spacio 10 horas, ipsa nesciente et dolorem non sentiente. Postea alio paroxysmo laboravit per vi horas. Eodem die, praeter spem astantium ad se reddit, \textsuperscript{/101}/ a paroxysmo liberata.

Eam rogabat mater quomodo se habuit. Recte inquit: cur vos omnes me visitare venistis, unde huc, non aegroto nec ullam dolorem sentio. Vix expergefacta amicorum confabulatione sed iterum dormit, quasi sopori vigilanti. Tandem ad se reddit spacio 24 horarum, sed sensus non dum perfecti. Me presente, rogabam an dolores membrorum sentiebat. Respondit dolore et fatigatione membrorum lacinata, ut vix per se ire potuit, et satis mire nequit quomodo eveniet.

Sic Senertus folio 109: accidit, inquit, interdum et tristis membrorum omnium iactatio et concussio cum levi resolutione coniuncta.\textsuperscript{234} Icteritia quoque per totum corpus defoedata, cum menstrui diminutione.

Curam talem nomine Dei praescrpsi:

℞: electuarii ventriflui dr.vi, tartari cremoris sc.i, rhabarbari pulverizati sc.ii. Fiat bolus; sex sedes.

Ad icteritiam:

\textsuperscript{232}Eugalenus, De scorbuto morbo, pp. 86-88. \textsuperscript{233}Martini, 'De scorbuto', in Sennert, de scorbuto tractatus, pp. 620-621. \textsuperscript{234}Sennert, De scorbuto tractatus, p. 109.
Mrs Layton, a gentlewoman born of a noble line: suffered for a long time from scorbutic epilepsy. In the first place, convulsive movements with fever always indicate it. For other signs see Eugalenus page 86 and Sennert page 620. The attack starts by wretchedly troubling her with a chill, shivering and shaking of the limbs for half an hour so that she shook the whole bed. It then persists for ten hours, during which she is unaware and insensible to pain. She suffered from the subsequent attack for six hours. The same day she came to herself beyond the hope of the bystanders /101/ after having been freed from the attack.

Her mother asked her how she was. She replied straight away: ‘Where have you all come from to visit me? I do not feel illness or any pain.’ She was barely kept awake by the conversation among her friends, but fell asleep again, as if in a waking sleep. Eventually she came to herself for twenty four hours, but her senses were not yet fully restored. Being there, I asked if she felt pain in her limbs. She replied that she was so attacked by pain and weariness in her limbs that she could hardly move, and was so bewildered she could not say how she was going to be.

Thus Sennert, page 109: it sometimes happens, he says, that the unhappy shaking and disturbance of all the limbs is associated with some recovery. She was also disfigured by jaundice throughout the body, with diminution of her periods.

I prescribed a cure in this way, in the name of God:

℞: loosening electuary 6dr, cream of tartar 1sc, powdered rhubarb

---

11 Her...14 friends] S.O. omits. 13 She...19 was] S.O.: After she fell asleep, another fit she had, wherein she said she had a cutting pain. 20 Thus...22 recovery] S.O. omits. 25 loosening] ventrifluus is an adjective, not part of the proper name of the electuary.
℞: Mithridati optimi dr.i, cornu cervi praeparati sc.ii, pulveris lumbricorum dr.ii, conservae berberorum unc.i, pro ii matutinis. Melius habuit, ab icteritia liberata.

Postea sic purgata:

℞: pilularum foetidarum, alephanginarum, cochiarum ana sc.i. [...] agarici trochischati sc.s, castorei gr.vi. *Cum syrupo de stoechados quantum satis fiant pilulae* 7,235 Dentur iii hora cubitus, mane 4 cum custodia.

Postea sternutatorio hoc usa:

℞: nucis moschati, radicum paeoniae ana dr.s, ellebori nigri sc.i, pyrethri, piperis albi ana sc.s. Misce. Fiat pulvis sternutatorius, cujus portio calamo suffletur in nares.236

/102/ Dum suspectum accessionis tempus exactum sit mane quotidianie offerentur drachmae duae huixus opiateae:

℞: conservae cochleariae unc.ii, *semper enim medicamenta antiscorbutica alis admiscenda, ut malitiam morbi infringeres*237 dianthos, conservae betonicae ana unc.i, Mithridatii veteris, theriacae verae ana dr.i, visci quercini, rasurae cornu cervi, seminum paeoniae, cranii humani inhumati pulverizati ana sc.4. Misce. Capiat per se vel cum aqua betonica, et pauco olei vitrioli.238

Ex his, Laus Deo, paroxysmi repellendi ac ex toto liberata fuit.

---

2sc. Make a bolus: six stools.

For the jaundice:
℞: best Mithridate 1dr, prepared hartshorn 2sc, powder of worms 2dr, barberry conserve 1oz: for two mornings. She felt better when freed from the jaundice.

Next she was purged in this way:
℞: pills - foetidae, alephanginae, cochiae each 1sc, trochischated agaric ½sc, castor 6gr. Make 7 pills with sufficient syrup of French lavender. Give 3 at bedtime, 4 in the morning with an attendant.

Then she used this sneezing powder:
℞: nutmeg, peony root each ½dr, black hellebore 1sc, pellitory of Spain, white pepper each 1sc. Mix. Make the sneezing powder. Blow a portion of it into the nostrils through a reed.

/102/ When it is exactly the expected time of onset in the morning, give two drachms of this opiate every day:
℞: scurvy grass conserve 2oz (antiscurbutic medicines should always be given mixed with others, so that you diminish the evil of the illness) mallows, betony conserve each 1oz, old Mithridate, Venice treacle each 1dr, moss from oak, hartshorn shavings, peony seeds, powdered unburied human skull each 4sc. Mix. Take on its own or with betony water and a little oil of vitriol.

These, praise God, fended off the attack and freed her from

22Burton, *Anatomy of Melancholy*, p. 109: they must especially beware, a melancholy discontented person [...] never be left alone or idle; but as physicians prescribe physic cum custodia, let them not be left unto themselves, but with some company or other, lest by that means they aggravate and increase their disease:

Non amplius in hoc malum incidit, sed ex eo tempore multis annis bene, recte et libere vivit.\textsuperscript{239}

[Case 114] Hemiplegiae, febris ardentis, lumbricorum cura.

Filia paedagogi, Liddea Trap, circa aetatis annum secundum, febre ardente, hemiplegia laborabat. Ab omnibus quotidian mortem cum vita mutare iudicabant.

A me, nutu Dei, sic restituta:

℞: cornu cervi praeparati dr.iii, aquae fontanae lib.i. Bulliant ad dimidias, tunc adde aquae rosarum parum, syrapi limonum unc.i, sacchari coch.s, olei vitrioli quantum satis ad gratam acetositatem, pro potu omnia alio omissa.

Corde applicabatur:

℞: theriacae verae dr.i, pulveris radicum paeoniae dr.s. Fiat emplastrum. Radices paeoniae in orbiculis incisae circa collum suspendantur filo. Inspergetur caput pulvere paeonie.\textsuperscript{240}

Inungatur nuca olei succini, olei sassaphras ana dr.s, spiriti rosmarini gut.vi. Misce pro nuca.

/emplastrum pro umbilico:

℞: aloes dr.s, pilularum sine quibus sc.i, lumbricorum sc.i, myrrhae sc.s. Cum felle bovino fiat emplastrum pro umbilico.

Ad extinguendam sitem et sedem provocare, capiat potionem

\textsuperscript{239}Ruland the Elder, ‘Centuriae III’, Curationum [...] centuriae, p. 199. \textsuperscript{240}Platter, Observationum [...] libri sex, pp. 26-27: Emplastrum hoc cordis regioni applicavimus: ℞ theriacae verae dr.i rad. paeoniae pul. dr.s. Misce. Item pulvere radicis paeoniae capilli conspergantur.

6 Liddea/ \Liddea/. 18 spiriti rosmarini] sp. ros [ A standard preparation; sp. usually abbreviates species, a powder, but Hall’s use of gut. (drops) in the quantity indicates a liquid].

293
everything. *She has not fallen into this misfortune any more, but has lived very well and without constraint since then, for many years.*

[Case 114] cure of hemiplegia, burning fever, worms.

The teacher's daughter, Lydia Trapp, about her second year of age: suffered from burning fever and hemiplegia. They expected every day from all this that she would exchange life for death.

I restored her in this way, by God’s will:

℞: prepared hartshorn 3dr, spring water 1 pint. Boil, reduce to a half, then add a little rose water, lemon syrup 1oz, sugar ½ spoonful, sufficient oil of vitriol for a pleasant tartness in her drink, laying aside all other drinks.

This was applied to the heart:

/103/ A plaster for the umbilicus:

℞: aloes ½dr, pills - sine quibus 1sc, worms 1sc, myrrh ½sc. Make a plaster for the umbilicus with ox gall.

---

4 Case 114] S.O.: Observ. XVIII [Second Century], p. 104. 7 hemiplegia] S.O.: want of sense and motion in some parts. 294
hanc:
℞: syrupi rosacei solutivi unc.i, aquae coctae unc.ii, olei vitrioli quantum satis ad gratam acetositatem. Pro stomacho, unguentum pectorale.

Atque his quidem paucis intra paucis dies sanitati integrae sigillum datum est.²⁴¹

[Case 115] Articularis doloris cura.

Domina Underhill aetatis 53, dolore articulari manus et quando manu manum fricat, statim exurgit tumor flatuosus. Habet quoque ruborem faciei subitaneam, cum legit loquela paene amissa, ut astantes non intelligant. Sentit quasi morsum formicarum in multis corporis partibus, haec ex scorbuto.

℞: sarsaparillae unc.4, sassaphras unc.i, agrimoniae, cochleariae, nasturtii aquatici, becabungae ana M.i, corticis radicis capparum, corticis mirabilanorum Indorum ana sc.4, polypodii quercini, liquiritiae ana unc.s, uvarum passarum exemptis arillis dr.x.²⁴²

Macerentur per noctem in lib.vi aquae fontanae. Mane bulliant ad consumptionem mediatatis. Colaturae adde senae unc.i, rhabarbari dr.i, una vel altera. Facta ebullitione, adde syrupi sceletyrbici Foresti unc.4. Fiat syrupus: dosis coch.vi vel 8.

Rite purgata et optime se habuit et summis laudibus hunc syrupum extollit. et, laus Deo, hoc unico machinamento vindicata est

To remove thirst and provoke a stool, take this potion:

℞: loosening syrup of roses 1oz, boiled water 2oz, sufficient oil of vitriol for a pleasant tartness. For the stomach, pectoral ointment.

And so with these few, her complete health was sealed in a few days.

[Case 115] Cure of painful joints.

Lady Underhill, aged 53: with painful joints in her hands, when she rubs them together a flatuous\(^{23}\) swelling arises at once. She also has sudden flushing of the face. When she reads her voice almost disappears, so that bystanders cannot understand her. She feels as if there are ant bites in many parts of the body. This is due to scurvy.

℞: sarsaparilla 4oz, sassafras 1oz agrimony, scurvy grass, watercress, brooklime each 1 handful, bark of caper root, rind of Indian myrabolans each 4sc, polypody of the oak, liquorice each \(\frac{1}{2}\)oz, stoned raisins 10dr. Soak overnight in 6 pints spring water.

In the morning boil, reduce by half. To the strained liquid add senna 1oz, rhubarb 1dr, one or the other. Once boiled, add Forest's scheletyrbic syrup 4oz. Make a syrup. Dose: 6 or 8 spoonfuls.

She was rightly purged and was very well, and extolled this syrup with the highest praise. She was protected from the misfortune.

\(^{23}\)See Barrough, The Method of Physick: tumours called inflations ... have their original of a phlegmatick humour, and therefore doe yeeld unto touching and handling, and our fingers being laid thereon doe descend somewhat deeply into them.

\(^{7}\) Case 115] S.O.: Observ. XIX [Second Century], p. 105. \(^{23}\) was...device] S.O.: as if it wrought by enchantment.
ab hoc malo.243

[Case 116] /104/ Articularis doloris cura experta.

Eques Underhill aetatis 50, gutta ambulativa misere cruciatus.

Dolebant corporis articuli, malleoli, genua, brachia, collum.

Offerebam petenti huic aegro auxilium sequentem medicinam, qua Deo annuente intra dies paucos ex integro evanuere dolores:

Purgato corpore, balneo sequenti usus:

℞: salis lib.i, sulphuris vivi unc.i.s, aluminis lib.s, baccarum lauri pulverizatarum unc.4. Bulliant in satis quantum aquae. Insideat usque ad genu quotidie, per horam mane et sero. Non solum a podagra liberatus, verum etiam a duritie carnis sub digitos pedis curatus.

Pro praeservatione, mense Octobris sequenti praescripsi:

℞: caryocostini dr.ii.s, electuarii de tamarindis unc.s, tartari cremoris sc.i. Cum saccharo, fiat bolus.

Deinde pilulas antipodagricis Plateri in hunc modum dispensatas, 5 devoret:

℞: hermodactylorum verorum excorticatorum unc.s, aloes, turbith, mechoachani ana dr.i, rhabarbari, electuarii myrobalanis citrinae, chebulorum, masticis ana sc.iii, euphorbii sc.ii, radicis aristolochiae rotundae sc.i, seminum hyperici, zingiberis, seminum cuminis ana

243Ruland the Elder, 'Centuria III'. Curationum [...] centuriae. p. 218: sequentibus machinamentis vindicatus est ab hoc malo.

9 tartari[♀]. 18 tartari[♀].
praise God, by this one device.

[Case 116] /104/ Well-tested cure of painful joints.

Squire Underhill, aged 50: wretchedly tortured by wandering gout.

He suffered pain in the joints of the body, the ankles, knees, arms and neck. I offered the entreating patient the following medical remedy. With God's favour it entirely banished the pains.

℞: powder of sarsaparilla bark, senna each 6dr, cream of tartar 3dr. Mix. Dose 4sc, or 3, or 2, by which he daily evacuated three or four times.

Once the body was purged, he used the following bath:

℞: salt 1lb, live sulphur 1½oz, alum ½lb, squashed bay-berries 4oz. He sat in it up to his knees every day, for an hour in the morning and evening. He was not only freed from the gout, but was also truly cured of the hard flesh beneath his toes.

For prevention the following October, I prescribed:

℞: caryocostinum 2½dr, tamarind electuary ½oz, cream of tartar 1sc. Make a bolus with sugar.

Then Platter's pills against gout, dispensed in this form.

℞: true colchicum peeled ½oz, aloes, turbith, mechoachan each 1dr, rhubarb, electuaries of myrobalans, citron, yellow myrobalans, mastic each 3sc, euphorbia 2sc, round birthwort root 1sc, St John's

ane cibos alios bibatur [...] et lac decoctum cum ovis. consolidationis gratia.
wort seeds, ginger, cumin seeds each ½dr, salt of gems ½sc. Make a few pills with ground-pine juice, prepared scammony ½dr. Dose: 1dr each month. He was thus released entirely from a recurrence of the pain. I nonetheless added the above powder to a ½oz quantity of betony with rose sugar 1oz.

He became very well and for several years the pain never returned, praise God.

Cured.

[Case 117] Passing blood.

Mr Izod, a gentleman of Toddington, consumed by old age: suffers from bloody micturition on slight movement of the body.

℞: a mass of turpentine pills with rhubarb 2dr, clear turpentine 1dr. Make 15 pills with liquorice powder. Give from a spoon with marshmallow syrup.

He used the following tablets:

℞: winter-cherry trochees with opium ½oz, comfrey roots, turpentine boiled hard each 1dr, sugar 2½oz. Make tablets with gum tragacanth infusion, 2sc by weight. Drink cream of refined barley often, also milk cooked with eggs to an agreeable thickness.

Cured.

---

Domina Smith, Catholica Romana, formosa et bene habita, flatu stomachi maxime afflicta. Ab emperico stibii infusione forti, mense ab hinc accepta. Longe peius se habet. Nocte ter vel 4 haustum iuris pinsit pro flatu expellendo, aliis dormire pro dolore non potest neque in lecto quiescere. Circa aetatis annum 27.

℞: pilulae hierae cum agarico, de succino, Ruffi ana sc.i. Fiant pilulae vi. Deaurentur. Dentur hora cubitus iii, mane capiat quantitatem /106/ nucis moschati.

Electuarium sequentem:

℞: electuarii chalybeati Cratonis unc.i.s, electuarii ventriflui unc.s. Misce. Utetur exercitio.

Post pastum:

℞: seminum coriandri praeparorum, foeniculi, anisi, carvi ana dr.i.s, cornu cervi praeparati, coralli rubri praeparati, cinamomii, nucis moschati ana dr.s, speciei aromatici rosati, speciei laetificantis Galeni, diamosci dulcis ana sc.s, sacchari ad ponderis omnium. Fiat tragea.

Die 24 Octobris, ad me misit pro pulvere praedicta e Comite Lecestriensis, ea quantitate devorata quam hic habuit. Et anno sequenti obiter vidi, et pro pulverem ingentes mihi reddebat gratias ut a saevissimis istis doloribus se omnino liberatam.

Sic his ita administratis ocyssime, salva et incolumis nutu Dei, in omne aevum laudandi evasit.246

---

18 tragea] trachea.
Lady Smith, Roman Catholic, beautiful and healthy, very much vexed by wind in the stomach. She took a strong infusion of antimony from an empiric a month ago and is now very much worse. To expel the wind she takes three or four draughts of broth at night, otherwise she can neither sleep for the pain, nor lie peacefully in bed; about 27 years of age.

℞: pills - hiera with agaric, amber, Ruffus's each 1sc. Make six pills, gild them. Give three at bedtime, in the morning take the quantity /106/ of a nutmeg.

The following electuary:

℞: Crato's steeled electuary 1½oz, opening electuary ½oz. Mix. She is to take exercise.

After meals:

℞: seeds - prepared coriander, fennel, anise, caraway each 1½dr, prepared hartshorn, prepared red coral, cinnamon, nutmeg each ½dr, aromatic rose powder, Galen's laetificans powder, sweet musk each ½sc, sugar to the weight of everything. Make a sweetmeat.

24 October. She sent to me for the above powder, on behalf of the Earl of Leicester, since she had eaten what she had. The next year I saw her in passing, and she thanked me greatly for the powder because she had been altogether freed from her very severe pains.

By the very rapid administration of these, she escaped safe and unharmed, by the will of God to whom be praise in eternity.
Generosa Winter, vidua, aetatis 28, Catholica Romana; fluxus ventris, inflammatione renum gravata, magnum urinae copiam redit, quantitate potus tripla, aegrotat se paene ad animae deliquium, calculo quoque cruciata. Alvi fluore lancinata et scorbuto confirmato debilitata.

Sequenti curata:

℞: Mithridatii optimi sc.ii, diascordii dr.s, confectionis alkermes sc.i, cornu cervi praeparati sc.s, lapidis bezoar gr.vi, manus Christi perlati dr.i, magisterii perlarum gr.4, coralli praeparati sc.s, electuarii laetificantis Galeni dr.i. Misce. Cum syrupi papaveris rheadis quantum satis fiat electuarium. Dimidiam partem aculeo cultelli devorabat, ex quo fluxus refrænatus, cum magno levamine et /107/ hilaritate animae. Hora cubitus alteram partem accepit. Nox ceteris quietior. Potus, decoctio cornu cervi.

Emplastrum pro orificio stomachi:

℞: speciei aromatici rosati Gabrielis dr.s, labdani dr.s, Mithridatii optimi, theriacae Andromachi ana dr.i, cerae flavae dr.ii. Dissolvantur in oleum stomachicum Cratonis. Fiat lege artis emplastrum.

Ex his venter constipata, pilulis sequentibus laxata:

[Case 119] Cure of a flux from the belly and excessive quantity of urine.

Mrs Winter, a gentlewoman, a widow aged 28, Roman Catholic: with a flux from the belly and inflammation of the kidneys. She passes a large amount of urine, three times more than she drinks. She is sick almost to fainting from being tortured by the stone. She has been attacked by loose bowel movements and weakened by confirmed scurvy.

She was cured as follows:

℞: best Mithridate 2sc, diascordium ½dr, alkermes confection, prepared hartshorn ½sc, bezoar stone 6gr, pearled manus Christi 1dr, magisterium of pearls 4gr, prepared coral ½sc, Galen’s laetificans electuary 1dr. Mix. Make an electuary with sufficient field poppy syrup. She swallowed half from a knife blade, which controlled the flux with great relief and /107/ cheerfulness of spirit.

She took the other half at bedtime. That night was more restful than others. To drink: hartshorn decoction.

A plaster for the mouth of the stomach:

℞: Gabriel’s aromatic rose powder ½dr, labdanum ½dr, best Mithridate, Venice treacle each 1dr, yellow wax 2dr. Dissolve in Crato’s stomach oil. Make a plaster by the usual method.

The stomach became constipated from this: loosened by the following pills:

℞: pills - Ruffus’s, of amber each 1dr. Make 10 pills. Give three at bedtime. Repeat the cordial.

---

Postea dabam potionem sequentem:

℞:

- *aquae antiscorbuticae Dorncrellii* unc. 4,
- *spleniticae eiusdem* unc. ii,
- syrupi sceletyrbici Forresti unc. iii.

Mess.  Detur coch. 8 mane.

Deinde usa electuario hoc:

℞:

- conservarum buglossi, caryophyllatae hortensis, dianthos ana unc. i,
- conservae cochleariae unc. ii,
- radicis Helenii conditae dr. iii,
- speciei diarrhodonis Abbatis dr. i,
- electuarii diapleris archonticonis unc. s,
- concoctionis alkermes sc. ii.

Cum syrupo sceletyrbico Forrestii quantum satis, fiat electuarium. Dosis quantitas avellanae stomacho ieiuno. Reiteretur decoctio cornu cervi.

His, Deo gloria, rite curata, et ab omni accidente liberata.

[Case 120] Scorbuti cura.

Domina Jenkenson, pulchra, pia, casta: dolore capitis, levi vertigine, cardialgia, dolore hypochondriorum, animae deliquio, vigilia, calore momentaneo manum et pedum, languore sine causa, gingivarum carne laxa, et saepe sanguinolenta, his cruciata.

℞:

- pilularum hierae cum agarico, Ruffi, ana dr. i,
- alephanginarum sc. ii.

Mane capiat haustum sequentis decoctionis. ℞: vini chalybeati sequentis:

℞: radicis ireos, corticis ebuli, sambuci, capparum, tamarisci,

- cichorii, graminis, foeniculi, asparagi, rubiae tinctorum ana unc. s,

---

[22] chalybeati] queer [for Quercetani (Du Chesne)].
Next I gave the following potion:

℞: Dornkrell’s antiscorbutic water 4oz. the same for the spleen 2oz.

Foreest’s scheletyrbic syrup. Mix. Give 8 spoonfuls in the morning.

Then she used this electuary:

℞: conserves of bugloss, clove-gillyflowers, clove pinks each 1oz.
scurvy grass conserve 2oz. preserved elecampane root 3dr.
diarrhodon Abbatis powder, diapleres archonticon electuary ½oz.
alkermes confection 2sc. Make an electuary with sufficient
Foreest’s scheletyrbic syrup. Dose: the quantity of a hazelnut on an
empty stomach. Repeat the hartshorn decoction.

By these, glory to God, she was properly cured, and freed from
all misfortunes.

[Case 120]  Cure of scurvy.

Lady Jenkinson, good-looking, devout and modest: tortured by
headache, slight giddiness, heartburn, hypochondriac pain,
fainting, wakefulness, heat spells briefly in the hands and feet,
weakness without cause, loose flesh in the gums and often blood-
stained.

℞: pills - hiera with agaric, Ruffus’s each 1dr, alephanginae 2sc.
Make pills with betony water, 15 pills with diatartar 2sc. Take
/108/ 3 before sleeping.

Take the following decoction in the morning: ℞: the following
steeled wine:

℞: orris root, bark of dwarf-elder, elder, capers, tamarisk, chicory,

much better.

She was purged thus, as was needed:

℞: pills - Ruffus's, alephanginae, diatartar each 1sc, pills /109/ hierae with agaric 2sc. Make six pills with sufficient antiscorbutic water. Take three at bedtime.

5 December: tortured by toothache:

℞: scurvy grass water 6oz, red rose, plantain waters each 3oz, rose honey, simple diamoschu each 1oz, sufficient spirit of vitriol for a pleasant tartness. Dose: as much in the mouth as she can gargle.

She was freed from the toothache, and, glory to God, completely freed from all symptoms.

[Case 121] 1629. [cure] of bloody urination, stones.

Butler, of Stratford upon Avon: produces large amounts of bloody urine on slight movement of the body, with oppressive pain in the kidneys. He has been attacked by very great heat on urinating, maximally around the prepuce. This is [due to] no other material than dispersed tartar, from the coagulation of which grains of sand are afterwards produced (see Horst, observation 39, page 284).

He used sarsaparilla decoction for eight days. Afterwards he used tormentil, which when drunk with wine, cures the torture of

Hic morbus spacio 8 dierum magna ex parte minutus et usu curatus.

[Case 122] Scorbuti, alborum fluxus, flatus uteri, [cura].

Generosa Richardsune, Catholica Romana, flatu uteri, (ita ut quando urinam emittit, crepitos multis uterinos emittit, sicut alii per anum) scorbuto lipothymia, dolore capitis /110/ rubeorum nimio fluxu, iis sistentibus tum alborum fluxu nimio laborat.

Restaurativum ex coxa vitulina cum gallo et rasurae cornu cervi et chyna omni mane pinsebat aquae nostrae lactis cum manu Christi perlata.

\textsuperscript{251}John of Gaddesden, *Rosa Anglica*, p. 510: tormentilla cum vino bibita, urinae cuciatius, et stranguriam curat, sicut sum expertis, nec est ei alius par. | \textsuperscript{252}Bruele, *Praxis medicinae*, p. 351: Lamina plumbea perforata plurimis foraminibus, renum regioni applicetur, saepiusque mutetur; [See also fn. below, and pp. /110/., /119/ and /128/]. | \textsuperscript{253}Bernard de Gordon, *Lilium Medicinae*, p. 602: cum lamina plumbea perforata et madefacta in aceto [see also previous fn.].

1 510| 99 [which is unrelated].
dripping urine (well-tested on Stephen Taylor of Alveston, and by John of Gaddesden, page 510). Nor is there any equal to it, as John says in his book. **Apply thin lead sheets perforated with many holes and sprinkled with wine vinegar, to the kidney region, and change often.**

The illness was in large part diminished within eight days, and he was cured by using these.

**[Case 122]** Cure of scurvy, white flux, uterine wind.

Mrs Richardson, a gentlewoman, Roman Catholic: suffers from uterine wind (so that when she passed urine she breaks much wind from the womb, just as if from the anus) scurbutic weakness, headache, excessive red flux. When this stops she then suffers from excessive white flux. She was often attacked by lower backache with great heat in the back, very great weakness of the whole body and distress. She was oppressed by headache, worst at the back. She cannot stand light. She had a satisfactory, praiseworthy appetite, feels an aversion to medicines.

A restorative of a veal joint with a rooster, and shavings of hartshorn and china were crushed every morning in our milk whey

[Case 123] /111/ Vomitus, tumoris pedum, febris quotidianae cachexiae, scorbuti cura.

Generosa Peirse de Auson, Catholica Romana, pulchra, circa aetatis annum 28, melancholia, vomendi conatu inani, tumore pedum vespertino, imbectillitate totius corporis, febre quotidianae scorbutica, cum levi horrore, dolore splenis, doloribus variis articulorum

\textsuperscript{254}Croll, \textit{Basilica chymica}, p. 276; Croll recommends aqua sperniola ‘in profluvio muliebre contumacissimo’, p. 277. \textsuperscript{255}Bernard de Gordon, \textit{Lilium medicinae}, p. 602 [see also p. /109/]. \textsuperscript{256}Dorncrell, \textit{Dispensatorium novum}, pp. 33-36. \textsuperscript{257}I have not identified a source for this.
with pearled manus Christi.

To control the flux:
℞: milk whey 3oz, frog-spawn water 2 spoonfuls, pearled manus Christi 2sc, alkermes confection 2sc. On the back: lead sheets perforated and wetted with wine vinegar.

A plaster for the womb:
℞: prepared hartshorn 1sc, alkermes confection ½sc, bezoar stone 3gr, scabious water 2oz, lemon syrup ½oz. Mix. Give at the time she feels cold, because she had an erratic fever.
℞: snail water (my own compound), simple of frogs each 4oz, alkermes confection 2sc, pearled manus Christi ½oz, antiscorbutic water 6oz, splenitic 2oz. Mix. Repeat and add 1½oz of Rodrigo de Fonseca’s laetificans syrup.25
    She recovered her lost strength wonderfully, and said this divine water far surpassed potable gold, and she wished never to be without it because, she said, it was the equal of anything. She was thus completely cured, and after the death of her husband remarried and bore an heir six years later.

[Case 123] /111/ Cure of vomiting, swelling of the feet, quotidian fever, wasting, scurvy.

Mrs Peers, a gentlewoman of Alveston, Roman Catholic, beautiful, about the age of 28: oppressed by melancholy, vain attempts to vomit, swelling of the feet in the evenings, weakness of the whole body, quotidian scorbutic fever with slight shivering, splenic pain,

25There are several versions of laetificans syrup. I have not yet found one attributed to Rodrigo de Fonseca.

gravata, urina sicut aqua clara.

℞: electuarii de tamarindis unc.s, syrupi diaserios unc.i, oxymellitis nostri unc.s, aquae buglossi unc.i, olei vitrioli gut.vi. Misce: sedes vi. Die sequenti urina turbida.

5 Die sequenti:
℞: speciei aromatici rosati sc.i, electuarii de tamarisco dr.ii, aliis ut antea additis.

Hora somni:
℞: lapidis bezoar gr. iii, laudani Paracelsi gr.ii, confectionis alkermes sc.s. Nox quieta.

10 14 die:
℞: syrupi papaveris unc.i, aquae scabiosae unc.i, olei vitrioli quantum satis, lapidis bezoar gr.4, aquae rosarum parum. Usa vino chalybeato ut pro Generosa Talbot folio /87/, et pro Domina Jenkenson folio /108/, cui addebam syrupi sceletyrbici Foresti.

15 ℞: vini unc.vi, syrupi sceletyrbici unc.4, *aquaes antiscorbuticae spleniticae* unc.ii, syrupi laetificantis unc.iii.258

Ob maerore in suffocationem matricis incidebat:

---

258Dorncrell, *Dispensatorium novum*, pp. 33-36.
various pains in the joints. Urine: like clear water.

℞: tamarind electuary ½oz, diasereos syrup 1oz, our oxymel ½oz, bugloss water 2oz, oil of vitriol 6 drops. Mix. Six stools. The next day the urine was turbid.

The following day:

℞: aromatic rose powder 1sc, tamarind electuary 2dr, with other items added as before.

At bed time:

℞: bezoar stone 3gr, Paracelsus’s laudanum 2gr, alkermes confection ½sc. The night was restful.

14th:

℞: poppy syrup 1oz, scabious water 1oz, sufficient oil of vitriol, bezoar stone 4gr, a little rose water. She used steeled wine as for Mrs Talbot page /87/ and Lady Jenkinson page /108/, to which I added Foreest’s scheletyrbic syrup.

℞: wine 6oz, scheletyrbic syrup 4oz, antiscorbutic water 2oz, splenitic 2oz, laetificans syrup 3oz.

℞: prepared hartshorn 1sc, alkermes confection 2sc, magisterium of pearls, tincture of coral each 6gr, pearled manus Christi ½dr, bezoar stone 6gr, sufficient scurvy grass conserve. Make an electuary with honey. I added pleres archonticon powder. She was freed from her symptoms.

On account of sadness she fell into suffocation of the mother:

℞: castor 1dr, bryony dregs ½sc. Make 5 pills with water for the womb. Give at nightfall. To the umbilicus: caranna plaster with musk. She inhaled asafoetida smoke through her nostrils:
levata.

Postea purgata:
℞: pilulae Ruffi, speciei hierae simplicis ana sc.i.s, castorei sc.i, faeculae bryoniae sc.s, aquae hystericae quantum satis. Fiant pilulae 5, hora somni.

Sic rite curata.

[Case 124] /112/ Matricis motus, doloris, præfocationis cura.  

Alice Collins, pedissequa dominae Puckringe, circa aetatis annum 24, suffocatione matricis cruciata. Menstruis obstructis, paroxysmo finito lachrimas effundit, item urina sicut aqua fontana. A me vero ad exerstionem morbi et symptomatum huiusmodi medela erat praescripta.  

℞: radicis bryoniae unc.s, foliorum senae unc.s, zingiberis dr.s, cinamomi dr.i, sacchari dr.vi. Infundantur per noctem in seri lactis lib.i.s. Mane bulliant parum et coletur. Adde syrupi artemisiae compositi unc.ii. Ex hac infusione potui per aliquot dies exhibebatur mane unc.v calide.

Rite purgata recteque se habuit.

[Case 125] Vermium cura.

Hester Silvester, filia Generosae Smith, nunc marita de Burforde, vermibus lacinata anno praeterito, a me pulvere sequenti curata.

---

259* Ruland the Elder, ‘Centuria VI, Curationum [...] centuriae’, p. 62.  
260* Ruland the Elder, ‘Centuria VI, Curationum [...] centuriae’, p. 447: A me vero ad revelationem morbi et symptomatum huiuscemodi medela erat praescripta.  
261* Ruland the Elder, ‘Centuria I, Curationum [...] centuriae’, p. 63: ℞ radicum bryoniae drach iii fol. senae mundatae unc.s zingiberis scrup. s. cinamomi drach.i sacchari unc.s Infundantur per noctem in seri lactis caprini calentis lib.i.s. Ex hac infusione potui per dies aliquot exhibebatur stomacho ieiuno ad unc. quinque calide.
successfully relieved.

   Afterwards she was purged:

℞: pills - Ruffus’s, simple hiera powder each 1½sc, castor 1sc,
bryony dregs ½sc, sufficient water for the womb. Make five pills:

   [take] at bed time.

   She was thus properly cured.

[Cure of motion of the womb, pain, choking.

   Alice Collins, Lady Puckering’s companion, about 24 years old:
tortured by suffocation of the mother. Her periods were obstructed,
when the paroxysm ends she bursts into tears. Also, the urine is
like spring water. I did indeed prescribe these medicines to root out
the illness and symptoms:

℞: bryony root ½oz, senna leaves ½oz, ginger ½dr, cinnamon 1dr,
sugar 6dr. Infuse overnight in milk whey 1½ pints. In the morning,
boil a little and strain. Add compound mugwort syrup 2oz. Give
5oz of this infusion to drink hot, in the morning, for a few days.

   She was rightly purged and became well.

[Cure of worms.

   Hester Sylvester, the daughter of Mrs Smith, gentlewoman, now
married in Burford: attacked by worms last year, and cured by me
Nunc ad me misit pro pulvere.

℞: corallinae, seminis sanctonici an. uncias duas, dictamni albi, bistortae, tormentillae an. uncias. Omnia in pulverem redigantur, et aceto acerrimo irrorentur, ac ad umbram quousque sicci fiant. Tractentur, quorum pondus a drachma media ad tres usque, pro virium et morbi magnitudine signetur, aliquando in vino quandoque nostra aqua portulacae, vel pomo sub cineribus cocto.262

Iterum curata, laus Deo.

[Case 126] /113/ Tympanitis, vocis raucedinis cura.

Bibat mane et vespere uncias.

with the following powder. Now she sent to me for it.

℞: sea-moss, French wormwood each 1 oz, white dittany, snakeweed, tormentil each ½ oz. Reduce all to a powder, sprinkle with sharp vinegar and dry in shade. Take this, from ½ dr to 3 dr by weight (for her, ⅛ dr) according to strength and the degree of the illness. It is sometimes put in wine, sometimes our purslane water, or in an apple cooked in the ashes.

She was cured again, praise God.

[Case 126] /113/ Cure of tympany, hoarse voice.

Lynes of Stratford upon Avon: suffers from tympany. Age: 53. She has been weighed down by a huge swelling of the belly so that she could hardly get about, with hoarseness of the voice and aversion to food. Her friends despair of her as in a hopeless condition.

Symptoms of dropsy also accompanied this, as they commonly do.

In order to cure and avert these most difficult of misfortunes I establish, with the help of divine grace, a method of treatment like this:

℞: orris root, wild ginger, pellitory of Spain, elecampane, briar, bark of elder root each 3 dr, origanum, calamint each 1 pinch, bindweed 1 oz, mecoachan 3 dr, anise seed, bay berries each ½ oz. Boil by the rule of practice in 2 pints white wine in a closed bain Marie for four hours.
Deinde evacuetur pilulis de soldanella sic.\textsuperscript{264}

\textit{℞:} summitatum soldanellae sc.ii, cinamomi sc.i, pilulae aggregativae dr.i, trochischi alhandal sc.s, elaterii gr.4. Cum succo radicis iridis, fiant pilulae, ex dr.i, quinque. Sumat iii circa medium noctem, ut opus reiterentur.\textsuperscript{265}

\textit{Ventriculus reliquaque viscera hoc electuario erunt corroboranda:}

\textit{℞:} succi radicis iridis dr.iii, canellae, galangae ana dr.ii, caryophylli, macis ana dr.i, zedoariae sc.ii, soldanellae unc.s. Pulverizentur et cum melle despumato misceantur in formam electuarii. Sumat alternis vel singulis diebus, quantitatem nucis Ponticae [...] imperantur etiam pulveres a pastu sumendi, ut ventriculus a crudis humoribus perfrigeratus modice calefiat, facilius concoquat flatusque discutiat.\textsuperscript{266}

\textit{℞:} seminum coriandri praeparatorum unc.s, /114/ seminum foeniculi, anisi ana dr.ii, carvi dr.i, cinamomi dr.i, radicis acori veri, galangae, corticis citri sicci ana dr.i, rosarum rubrarum dr.s, sacchari ad ponderem omnium. Post pastum sumendus coch.s.

His optime valere caepit. Ianuarii 4 1630.

then strain and sweeten with sugar. Drink 6oz morning and evening.

Then purge her with bindweed pills in this way:

℞: tops of bindweed 2sc, cinnamon 1sc, aggregative pills 1dr, alhandal trochees ½sc, wild cucumber 4gr. With orris root juice, make 5 pills from 1dr. Take 3 about midnight, repeat as needed.

The stomach and other organs should be strengthened with this electuary:

℞: orris root juice 3dr, canella, galangal each 2dr, cloves, mace each 1dr, zedoary 2sc, bindweed ½oz. Powder, mix with purified honey to form an electuary. Drink it on alternate, or every day, as much as a hazelnut. I also prescribed powders to be taken with meals, so that the stomach, cooled by the undigested humours, warms moderately. This promotes digestion readily and disperses wind.

℞: prepared coriander seeds ½oz, fennel, anise seeds each 2dr, caraway 1dr, cinnamon 1dr, roots of sweet flag and galangal, dried citron rind each 1dr, red roses ½dr, sugar equal to the weight of all. Take ½ spoonful after meals.

With these she began to feel much better. 4 January 1630.

10 Drink...day] S.O. omits.
[Case 127] Hystericae passionis, id est melancholiae, [cura].

Generosa Baker, opidana, aetatis 38, lumbagine, disiderio mingendi cruciata. Urina paua et alba. Ob metum scorbuti sequenti utetur exoptato eventu:

℞: syrupi laetificantis Roderici a Fonseca dr.ii, diatartari eiusdem dr.i,\textsuperscript{267} aquae buglossi unc.iii. Misce: vi sedes.

℞: ligni sassaphras incisi unc.i.s, cinamomi optimi unc.i. Infundantur in aquam fontanam unc.14 pro horis xii. Deinde bulliant ad medias, colatae adde saccharum albissimum unc.12. Bulliat ad consistentiam electuarii, cui adde dianthos, conservae buglossi ana dr.vi, florum caryophyllati unc.s, radicis enulae campanae conditae, zingiberis conditi ana dr.ii, speciei aromatici rosati gr.vii, confectionis alkermes unc.s, ambrae griseae, mosci ana gr.vii. Misce, fiat electuarium.

Praedicta aegrotans melius habere caepit 14 dierum spatio, quibus per 30 dies administratis, victusque ratione convenienti non neglecta, pristinas vires optime recuperavit. Deo gloria.

[Case 128] Tussis inveteratae, [cura].

Smith, aetatis 38, opidana, diu tussi inveterata et phlegmate

\textsuperscript{267}Rodrigo de Fonseca, \textit{Consultationes medicae}, p. 53

\textsuperscript{13} unc12 in margin; unc\textsuperscript{4} in text. \textsuperscript{20} victusque...recuperavit| Identical words occur on page /123/. Case 136, but I have not found a source.
[Case 127] Cure of fits of the mother, that is, melancholy.

Mrs Baker, a gentlewoman of Stratford upon Avon aged 38: tortured by lower backache with desire to urinate. Urine: little and clear. She used the following for fear of scurvy, with the desired result.

℞: Rodericus de Fonseca’s laetificans syrup 2dr, his diartartar 1dr, bugloss water 3oz. Mix. Six stools.

℞: pills - Ruffus’s 2sc, hiera with agaric 1sc, foetidae pills 1sc, castor ½sc. Make seven pills with mugwort water, gild them. Seven stools.

℞: sliced sassaphras wood 1½oz, best cinnamon 1oz. Infuse in spring water 14oz, for twelve hours. Then boil, reduce to half. To the strained liquid add refined white sugar 12oz. Boil to the consistency of an electuary, add dianthos, bugloss conserve each 6oz, clove-gillyflower flowers ½oz, preserved elecampane root, preserved ginger each 2dr, aromatic rose powder 7gr, alkermes confection ½oz, ambergris, musk each 7gr. Mix. Make an electuary.

This patient started to become better within fourteen days, with ministrations for 30 days, not neglecting a rational and appropriate diet. She recovered her former strength very well. Praise God.

[Case 128] Cure of persistent cough.

Smith, aged 38, of Stratford upon Avon: tortured for a long time by
viscoso et capitis /115/ dolore cruciata.

℞: florum sulphuris dr.ii, pulverum enulae campanae, ireos, glycirrhizae ana dr.i, mellis quantum satis ad omnium incorporationem. Fiat electuarium cui adde olei sulphuris gut.x.

5 Fiat linctus.

Deinde:

℞: auripigmenti dr.i, vitelli ovi quantum satis. Fiat massa ex commixtis quae ad ignem exsiccentur deinde pulverizentur, cui pulveri adde foliorum tobacci dr.s, tussilaginis sc.iii, seminum anisi sc.4, olei anisi gut.iii. Fiat suffumigium, excipiát parum per tubulum ore.

His breve curata.

[Case 129] Scorbuti cura experta. 1630

15 Februarii 8.

Uxor, lumbagine, convulsione, gingivarum corruptione, faetore anhelitus, flatu, melancholia, cardiaca passione, spontanea lassitudine, respirationis difficultate, strangulationis metu, alvi astrictione, ventris torminibus, diu laboravit. Nocte inquieta debilitata.

℞: electuarii de tamarindi unc.s, tartari cremoris dr.i. Misce. Dorso emplastrum oxycroceum applicatum, a torminibus ventris et lumbagine liberata.

10 die, frigore accepto relapsa misere lumbagine lacinata, ut se in lecto movere non potuit, sed cum astantes adiuvarent,
persistent cough, viscous phlegm and /115/ headache.

℞: flowers of sulphur 2dr, powders of elecampane, orris, liquorice each 1dr, sufficient honey to bind everything. Make an electuary, to which add oil of sulphur 10 drops. Make a linctus.

Then:

℞: orpiment 1dr, sufficient egg yolk. Make a mass from the ingredients, dry them by the fire, then powder. Add to the powder tobacco leaves ½dr, coltsfoot 3sc, anise seed 4sc, anise oil 3 drops. Make a fumigant. Take a little through a tube in the mouth.

These cured her in a short time.

[Case 129] Well-tested cure of scurvy.

8 February 1630.

[My] wife: suffered for a long time from lower backache, convulsions, diseased gums, foul-smelling breath, wind, melancholy, cardiac passion, spontaneous tiredness, difficulty in breathing, fear of choking, binding of the bowel movements, abdominal torment. She was weak and restless at night.

℞: tamarind electuary ½oz, cream of tartar 1dr. Mix. Oxycrocium plaster was applied to the side. She was freed from the abdominal torment and lower backache.

10th: She caught a cold, relapsed wretchedly and was attacked

---

9 Take a little through a tube in the mouth] S.O.: Of this he took in a pipe; this patient was in fact female. 12 Case 129] S.O. Observ. XXXIII [Second Century], pp. 118-119. 14 My wife] S.O.: Wife, [whether of the author, which is most probable, or of the man that went before, or of some other, I know not, because not mentioned]; [See note above: the previous patient was female]. 16 spontaneous tiredness] S.O.: laziness.
exclamaret quasi aculiis perforata.

Linimentum hoc pro lumbis dolentibus applicabam:
℞: pinguis gallinae, olei amygdalarum dulcium, anethi, rosacesi, mucilaginis /116/ radicis altheae cum aqua malvae extractae ana unc.s. Misce. Post unctionem, emplastrum oxycroceum applicare iubebam exoptato eventu, nam nox quietior fuit. Attamen mane flatu cruciata, tunc adhibebam electuarium antiscorbuticum

Danielis Senerti, sic concinatum:
℞: conservae germinum ac florum cochleariae unc.iii, flor. buglossi, caryophyllati hortensis, rosarum Damascenarum ana sesquiumciam, carnium nucis Indicae conditae, corticis citri conditae ac minutim concesorum ana unc.i, melliginis granorum iuniperi dr.iii, confectionis alkermes sesquidrachman, syrups de canella dr.vi. De succo cochleariae aut sceletyrbici Foresti quantum satis pro cogendo electuari, cui iusti acoris gratia admisceatur spiriti sulphuris acidi quantum satis.268 Fiat.

Pro ventris constipatione, suppositorium hoc:
℞: mellis unc.i, specie hierae picrae sc.ii, trochischi alhandal sc.s, seminum cumini unc.s. Fiat suppositorium longum. Pro cardiaca passione usa est electuarium pleres archonticon. Usa electuarii praescripto unc.s stomacho ietuno, et electuarii pleres archonticonis in quacunque hora, et postea vino chalybeato utetur. ℞: herbarum fumitoriae, bacabungae, nasturtii aquatici, cochleariae, betonicae, agrimoniae, scolopenaddiae ana M.s, corticis

268Martini, 'de scorbuto', in Sennert, de scorbuto tractatus, pp. 674-675: ℞ conserv. germinum ac flor. cochleariae verae unc.iii, flor. buglossi, garyphyll. hortens. rosarum damascen. an. sesquiumciam, carnium nucis Indicae conditae, cort: citri condit. ac minutim concisorum an. unc.i, melliginis granorum iuniperi dr.iii, confect. alkermes sesquidrachman, syr. de canella dr.vi, de succo cochleariae aut sceletyrbici Foresti q.s. pro cogendo electuari, cui iusti acoris gratia, admisceatur sp. sulphuris acidi q.s.
by lower backache so that she could not lie in bed. When the attendants helped her, she cried out as if pricked by thorns. 

I applied this liniment for the lumbar pains:

℞: chicken fat, oils of sweet almonds, dill, roses, mucilage of /116/ marsh mallow root extracted with mallow water each ½oz. Mix.

After the anointing, I prescribed oxycrocium plaster to be applied with the desired outcome, for the night was more peaceful.

However, she was tortured by wind in the morning, so I used Daniel Sennert’s antiscorbutic electuary, compounded in this way:

℞: conserve of scurvy grass buds and flowers 3oz, flowers of bugloss, clove-gillyflowers, damask roses each 1½oz, preserved coconut flesh, preserved citron peel chopped very small, juniper berry juice 3dr, alkermes confection 1½dr, cinnamon syrup 6dr. Make the electuary with sufficient scurvy grass juice or Foreest’s schelelyrbic to bind it.

Add spirits of sulphuric acid for a pleasantly bitter taste. Make it.

For constipation of the belly, this suppository:

℞: honey 1oz, hiera picra powder 2sc, alhandal trochees ½sc, cumin seeds ½oz. Make a long suppository. For the cardiac passion she used pleres archonticon electuary. She used the above electuary, ½oz on an empty stomach, and pleres archonticon electuary at any time whatever, and afterwards the steeled wine:

℞: herbs - fumitory, brooklime, watercress, scurvy-grass, betony.

pain in the body and back is so severe and troublesome that she wishes rather to die than to live with it any longer.

I saw her struggle with the pain that year, even while she was pregnant. She complains of being transfixed by something like a spike from the opening of the stomach to her mouth, and attacked by wind to a remarkable degree.

A preparation for the humours, like this:
℞: our oxymel 3oz, diasereos syrup 2oz, Foreest’s scheletyrbic syrup 2oz, watercress water 3oz. Give 4oz with good wine on three mornings: two or three stools each day.

Then she was purged:
℞: pills - hiera with agaric, alephanginae, Ruffus’s each 2sc, oils of sage, china 6 drops. Make 10 pills with betony water, gild them. Take three at bed time: rightly purged. Afterwards she used steeled wine as on page /116/ and the antiscorbutic electuary as for my wife. Then take our antiscorbutic water as for Mrs Richardson. For the lower back: the above ointment of chicken fat and other ingredients as on the previous page. After the anointing, apply Foreest’s ammoniac salve.

For corruption of the gums and weaknesses in the mouth:
℞: simple scurvy-grass water 6oz, iron water 7oz, rose honey and mulberry simple each 2oz, sufficient oil of vitriol for a pleasant tartness. Make an oral rinse. Her drink was antiscorbutic beer prepared as on page /116/.

A stomach plaster:
℞: diambra powder, Gabrieli’s aromatic rose powder each 1½sc,
liquidi dr.i, cerae flavae dr.vi, labdani dr.iii. Fiat emplastrum. Pro dorso emplastrum oxicroceum et saepe his utentibus. Hora somni capit 5 pilulas ex terebinthina Cypri et tartari.

His a tristi morbo liberata, et peperit filiam formosam etiamsi gravida. *His usa atque praeter omnium spem rediviva et sanitati integræ restituta Dei Optimi Maximi ope, cui soli esto gratiarum actio, benedictio et perennis laus in secula infinita,* Amen.\(^{274}\)

---

[Case 131] /118/ Febris tertianae nothae cura.

Domina Clarke, circa aetatis annum 44, febre tertiana notha corripitur. Duos habuit paroxysmos, tertio veniente obviam dedi sequentem vomitorium:

\[℞:\] poculi chymici dr.vi: vomitus vii, sedes i. Habuit paroxysmum levens. Postea calore superveniente, habuit decoctum de cornu cervi.

Die intermittenti, glister:

\[℞:\] malvae, betonicae, mercurialis, origani, calaminthi ana M.s, seminum anisi, foeniculi ana dr.ii, hordei integri p.i, florum chamaemillae, meliloti ana p.i. Fiat decoctio ad unc.x. In colatura dissolve catholiconis, diaphaeniconis ana unc.i, speciei hierae picrae, pulveris Holland ana dr.i. Fiat glister. Rite purgata.

Ante paroxysmum:

\(^{274}\)Ruland the Elder, ‘Centuria III’, *Curationum [...] centuriae*, p. 213: praeter omnium spem rediviva et sanitati integræ restituta ista mulier est Dei opt. max. ope, cui soli esto gratiarum actio, benedictio et laus perennis in secula infinita. [See also p. /31/].

3 tartari] ἦ.
mastic oil 1dr, spikenard and mace oils each 1dr, cloves 5gr, liquid
styrax 1dr, yellow wax 6dr, labdanum 3dr. Make a plaster. For the
back, use oxycrocium plaster frequently. Take 5 pills of Cyprus
turpentine and tartar before sleeping.

She was freed from this sad illness, and bore a beautiful
daughter, for she was pregnant. *The use of these revived her
beyond all hope, and restored her to complete health by the power of
almighty God most high, to whom alone be thanks, blessing and
perpetual praise, forever and ever.* Amen.

[Case 131] /118/ Cure of a bastard tertian fever.
Lady Clark, about 44 years old: seized by a bastard tertian fever.
She had two attacks, with the third coming on I gave the following
emetic against it:

℞: the chymical cup 6dr: seven vomits, one stool. She had a slight
attack. Then when the hot spell was coming on she had the
hartshorn decoction.

On the intervening day, this enema:

℞: mallows, betony, spurge, origanum, calamint each ½ handful,
seeds of anise, fennel each 2dr, whole barley 1 pinch, chamomile
and melilot flowers each 1 pinch. Make a decoction to 10oz. In the
strained liquid dissolve catholicon, diaphoenicon each 1oz, hiera
picra powder, Holland powder each 1dr. Make an enema: rightly
purged.

Before the attack:

---

Century], p. 121.
℞: confectionis alkermes sc.s, laudani Paracelsi gr.ii, magisterii perlarum gr.iii. Misce pro una vice, quibus remediis ab eo tempore restituta.

Dei gratia, huc usque domina belle habuit.

[Case 132] Mictio sanguinis cum dolore et ardore urinae ad levem corporis motionem, aetatis 39.

Generosus Thomas Underhill de Lamcot, circa aetatis annum 39, praedictis diu debilitatus.

℞: massae *pilularum de terebinthinae cum rhabarbaro Cratonis* dr.ii.275 Formentur pilulae vi ex dr.i. Dentur iii mane, involvantur pulvere liquiritiae. Dosis dr.s, cum cochlearis aliquot syrupi altheae Ferneli.

His finitis:

℞: *trocchisi alkekengi cum opio unc.s, radicis consolidae, terebinthinae coctione induratae ana dr.i, sacchari unc.ii.s. Cum infusione gummi tragacanthae in aqua malvae, fiant tabulae ponderis sc.ii. Capiat unam sero.

Mane:

℞: *terebinthinae limpidae unc.s. Dissolvantur cum vitello ovi ut artis est, addendo mellis unc.i, sacchari rosati tabulati unc.ii, vini generosi unc.vi. Misceantur. Bibat de lacteo illo **/119/** liquore ad unc.i omni mane, quotidie 3 vel 4 sedes ex unc.i. Hora cubitus trochischos praeparatos habuit, quoque *laminam plumbeam perforatam in aceto madefactam* renibus applicatam nocte atque

---

275Crato, *Consiliorum [...] liber secundus*, p. 371: Recommended for calculi, ‘cuius assumptione etiam viae urinariae, ad commodius excludendum calculum, laxantur.’
℞: alkermes confection ½sc, Paracelsus’s laudanum 2gr, magisterium of pearls 3gr. Mix as one dose, which restored her.

Thanks be to God, the Lady recovered in every way.

Mr Thomas Underhill, a gentleman of Lamcot, about 39 years old: weakened for a long time by the above.

℞: a mass of Crato’s turpentine pills with rhubarb 2dr. Form 6 pills from 1dr. Give 3 in the morning, coated in liquorice powder. Dose: ½dr with a few spoonfuls of Fernel’s marsh mallow syrup.

When this was finished:

℞: trochees of winter cherry with opium ½oz, comphrey roots, turpentine boiled hard each 1dr, sugar 2½oz. Make tablets weighing 2sc with gum tragacanth infusion in mallow water. Take one in the evening.

In the morning:

℞: clear turpentine ½oz. Dissolve in egg yolk as is the practice, add honey 1oz, rose sugar tablets 2oz, good wine 6oz. Mix. Drink the milky /119/ liquid, up to 1oz every morning: three or four stools daily from 1oz. He had prepared trochees at bedtime, also a perforated lead sheet wetted with vinegar was applied to the kidneys.

---

die.\textsuperscript{276}

Ex toto sanatus.

[Case 133] Mictio sanguinis absque dolore.

Chatherina Sturley opidana, aetatis 44, corpulenta pinguis: 
urinam omnino sanguineam emittit, absque omni dolore lumborum et orificii vesicae, ne in ipsa excretione quicquam sentit.\textsuperscript{277} Non a calculo nex exulceratione [...] restat igitur in acrimonia biliosi sanguinis et imbecillitate renum huius affectus causam esse quaerendum.\textsuperscript{278}

Hinc eo respiciendum esse iudicabam, ut sanguis acrior temperetur et renum retentrix corroboretur, sequentem igitur praescripsi potionem digestivam, quae:

\textit{℞}: glycyrrhizae rasae dr.vi, hordei mundi p.i, iuiubarum N.5, foliorum nymphaeae, violarum, rosarum ana p.i, seminum portulacae, acetosae, 4 seminum frigidorum maiorum ana dr.i, radicis cichorii unc.ii, herbarum endiviae, acetosae, plantaginis, fumariae ana M.i. Coquantur in brodio ciceris. Coletur, lib.i dulcoretur sacchari candi unc.ii. Fiat potio, de qua 3\textsuperscript{a} pars vacuo stomacho sumatur per octiduum.

Electuarium sequentem ad renum corroborationem ordinabam:

\textit{℞}: cornu cervi usti praeparati, coralli rubri praeparati ana dr.i, sacchari rosati antiqui, diacydonis sine speciebus ana unc.i.s, syrupi de rosis siccis quantum satis. Fiat electuarium molle de quo 2 horis

\textsuperscript{276}Bernard de Gordon, \textit{Lilium medicinae}, p. 602. [see /109/]. \textsuperscript{277}Horst, \textit{Observationum} [...] libri quatuor, p. 279: urinam omnino sanguineam emittit, absque omni dolore lumborum, nec etiam in ipsa excretione quicquam sentit. \textsuperscript{278}Horst, \textit{Observationum} [...] libri quatuor, p. 280: nec a calculo continuum solvente, nec etiam ab exulceratione [...] restat igitur in acrimonia biliosi sanguinis et imbecillitate renum huius affectus causam esse quaerendum.
night and day.

He was cured of everything.

[Case 133] Passing blood without pain.

Katherine Sturley of Stratford upon Avon, aged 44, stout and fat: passing entirely bloody urine without any pain in the back or at the mouth of the bladder. She feels nothing in the excretion, neither from a stone nor ulceration. The cause of this conditions remains to be sought in the bile-filled sharpness of the blood, and weakness of the kidneys.

I concluded from this that the over-sharp blood should be mellowed, and the retaining power of the kidneys strengthened. I therefore prescribed the following digestive potion, which was:

℞: liquorice shavings 6dr, wheat barley 1 pinch, jujubes 5, leaves of water-lilies, violets, roses each 1 pinch, purslane, sorrel seeds, the four greater cold seeds each 1dr, chicory root 1oz, green shoots of endive, sorrel, plantain, fumitory each 1 handful. Boil in chickpea broth. Strain. Sweeten with sugar candy 2oz. Make a potion. Drink a third on an empty stomach for eight days.

I prescribed the following electuary to strengthen the kidneys:

℞: burnt prepared hartshorn, prepared red coral each 1dr, old rose sugar, diacydonium without powders each 1½oz, sufficient rose juice syrup. Make a soft electuary, take ½oz two hours before meals,
ante cibum unc.s sumatur quotidie bis.²⁷⁹

Curata his, sed medicamentum sequens primus tenet:

Nota Bene:

Verum si hic sanguis purus fuerit, cum urina diligentur mixtus,
twice a day.

These cured her, but chiefly the following medicine:

℞: sanicle, lady’s mantle, golden-rod, wintergreen, betony, agrimony each 1 handful, marsh mallow 2 handfuls, fern, flowers of chamomile, St John’s wort, mugwort, briars, origanum, flowers and root of tormentil each 1 handful. Make a linen bag, three quarters of a /120/ forearm’s length long and broad. Slice the herbs finely and spread evenly so that they fill everything and are not placed too thickly. Sew the bag together wherever the herbs are not, then boil the bag in the dregs of good wine. Press the boiled bag little by little between two wooden rollers, place it on the whole lumbar region. The patient should in fact lie face down. Repeat this until the flux of blood stops. It is convenient to prepare two bags so that as one cools, the other may be applied hot.

NOTE:

If fresh blood is thoroughly mixed with the urine but does not...
non graviter redolens, et in dorso, ubi situs renum est, cruciatus pungens aderit, non adeo vehemens: a renibus defluit.

Quicunque repente sanguinem sponte mingat, praesertim liquidum: his in renibus venulae rupturam notat.

Si quis sanguinem meiat, ac grumos, et urinae stillicidio laboret, dolore ad hypogastrium, id est, imum ventrem et peritoneum, sive femen pertinentes, ea, quae sunt circa vesicam loca laborant

(Hippocratis Liber 4, aphorismus 78).

[Case 134] Febris ardens continua cum ventris constipatione.

Domina Hunks aetatis 69, febre continuae ardenti cum tumore lateris et dolore stomachi lancinata, constipatione ventris cruciata per 8 dies. Incurrit in has aegritudines deploratas, urina eius confusa ac lethalis apparet. Sed implorato et a me et amicis et ab aegra extremis illis malis percusso, Deo omnipotente archiatro, sanus iterum desperata Domina evasit in hunc modum:

℞: herbarum malvae, /121/ altheae, mercurialis ana M.i. Fiat decoctio. ☐: huius unc.12, diaphaeniconis, diacatholiconis ana

281 Willich, Urinarum probationes, p. 216: Verum si hic sanguis purus fuerit, cum urina diligentem mixtus, non graviter redolens, et in dorso, ubi situs renum est, cruciatus pungens aderit, non adeo vehemens: a renibus defluit: [similar to Hippocrates's Aphorisms, IV, LXXVII, but with the addition of pain in the back]; Quicunque repente sanguinem sponte mingunt, praesertim liquidum: his in renibus venulae rupturam notat [Aphorism IV, LVIII]; Si quis sanguinem meiat, ac grumos, et urinae stillicidio laboret, dolore ad hypogastrium, id est, imum ventrem et peritoneum, sive semen pertinentes, ea, quae sunt circa vesicam, loca laborant [Aphorism IV, LXXX]; [Aphorism IV, LXXXI].

282 Ruland the Elder, 'Centuria IV', Curationum, [...] centuriae p. 352: incurrit in has aegritudines deploratas. Urina eius confusa ac lethalis apparebat. Sed implorato et a medico et ab aegroto extremis istis malis percusso, Deo omnipotente Archiatro, sanus iterum desperatus senex evasit hinc in modum.

134] Aphorism 4.78 is the second one quoted.
smell strongly, and if a stabbing pain, not really painful, appears in the back where the kidneys are, then [the blood] certainly stems from the kidneys.

Anyone who passes blood suddenly and spontaneously, especially visibly, demonstrates a ruptured vein in the kidneys.

If someone passes blood and sand, and suffers from poor urinary stream with pain in the hypogastrium - that is, the belly and peritoneum - or if it reaches the thighs, then the area around the bladder is troubled (Hippocrates Book 4, aphorism 78).

[Case 134] Continual burning fever with abdominal constipation.

Lady Hunks, aged 69: attacked by a continual burning fever with torment in the sides and stomach ache, tortured by abdominal constipation for eight days. It happened in these lamentable diseases that the urine appeared confused and heralded death. But her friends and the patient, struck by these most severe misfortunes, appealed to me. The Lady, from giving up hope, was healed again through almighty God the Chief Physician, and escaped in this way:

℞: green shoots of mallow, /121/ marsh mallow, good King Henry

---

unc.i, pulveris sancti dr.i. Fiat glister: ii sedes. Postea iulapium nostrum antefebrificum.

Lateri dolenti applicetur unguentum dialtheae cum oleo amygdalarum dulcium:

℞: unguenti dialtheae unc.ii, olei amygdalarum dulcium unc.s.
Dissolvantur et misceantur ad ignem, pro unguento quo cum inunxisset latus, superimposuit linteum duplicatum tepide butyro perlitum et dolor remisit.283

Die sequenti:
℞: decoctionis praeparati lib.s, poculi chymici unc.ii. Fiat glister: iii sedes.

Pro expectoratione:
℞: syrupi scabiosae magistralis unc.i, lohoc passularum Quercetani unc.ii.

Dieta erat humectans. Potus, decoctum hoc:
℞: hordei mundi unc.iii, rosarum, violarum ana p.i, liquiritiae rasae dr.iii, passularum unc.ii, ficuum N.iii, sacchari candi unc.ii.
Decoquantur in lib.xvi aquae ad consumptionem lib.ii. Colaturam bibat.284

Febris desiit, sitis remisit, appetitus reddit, citra difficultatem spirat, beneque dormivit atque omnia praeter omnium spem et expectationem. Dei omnipotentis manu et ope, in illa senio confecta intra dies 14 adeo meliora facta, ut diceret se se a morte reviviscere et iuvenescere ex senio. Deo praepotenti ac omnipotenti medico soli

each 1 handful. Make a decoction. ℞: of this 12oz, diaphoenicon, diacathicon each 1oz, holy powder 1dr. Make an enema: two stools. Afterwards our antipyretic julep.

Apply marsh mallow ointment with sweet almond oil to the painful side:

℞: marsh mallow ointment 2oz, sweet almond oil ½oz. Dissolve, mix by the fire. For the ointment with which she anointed her side, she placed it on a folded cloth smeared with warm butter, and the pain diminished.

The next day:

℞: ½ pint of the prepared decoction, the chymical cup 2oz. Make an enema: three stools.

An expectorant:

℞: magisterial scabious syrup 1oz, du Chesne’s raisin lohoc 2oz.

Her diet was moistening. To drink: this decoction:

℞: wheat barley 3oz, roses, violets each 1 pinch, liquorice shavings 3dr, raisins 2oz, figs 3, sugar candy 2oz. Boil in 16 pints water until 2 pints are gone. Drink the strained liquid.

The fever stopped, thirst diminished, appetite returned. She breathed with less difficulty, and slept well. Beyond every hope and expectation in her old age, all her symptoms improved within fourteen days, by the hand and power of God almighty. She said that she was revived from death and rejuvenated in old age. To God the all-

[Case 135] Vertiginis, capitis doloris,
tenebricosae visionis cura.

Baronetus Puckringe, circa aetatis annum 38,\textit{ vir egregie doctus, rarae constitutionis, macilentus admodum et phlegmaticus};\textsuperscript{286} musis deditus si quis alius; optimo vivendi genere tum victu optimo usus.

De vertigine levi conquestus, et post cibum subito virium deiectio interdum aderat, [...] dolor capitis et tenebricosa visio sequebatur, [...] appetitus mediocris, urina bene colorata sed spumosa et alia accidentia ex consensu visarum concoctione orta.\textsuperscript{287}

[1:] Imbecillitatas concoctionis adiuwertur;

2: Caput et nervorum /122/ genus corroboretur;

3: Peccans causa, tam in capite recepta, quam recipienda, derivetur et revellatur.

\textsuperscript{285}Ruland the Elder, ‘Centuriae IV’, \textit{Curationum [...] centuriae}, p. 353: Fabris desit, sitis remisit, appetitus rediit, citra difficultatem spiravit, beneque dormivit atque omnia praeter omnium spem et expectationem, Dei omnipotentis manu et ope in sene decrepito intra dies duodecim adeo meliora facta, ut diceret se se a morte reviviscere et iuvenescere ex senio. Deo praepotenti ac omnipotenti medico soli laus esto in omne aevum. | \textsuperscript{286}Foreest, \textit{De febribus ephemeris et continuis}, p. 178: vir egregie doctus, annorum triginta, rarae constitutionis, macilentus admodum et biliosus. | \textsuperscript{287}Horst, \textit{Observationum [...] libri quatuor}, p. 104: Interdum post cibum etiam subita virium deiectio aderat [...] dolor etiam oculorum, tenebricosa visio sequebatur [...] appetitus mediocris [These are three subheadings in Horst’s text].
powerful and omnipotent physician alone be praise, for ever and ever.

[Case 135] Cure of giddiness, headache, darkened vision.

Baronet Puckering, about 38 years old, a man remarkably learned, of uncommon constitution, very thin and phlegmatic, as devoted to the muses as anyone: he followed the best way of life and also an excellent diet. He complained of slight giddiness, and after meals suddenly lost strength, accompanied now and then by headache and followed by darkness of vision and poor appetite. Urine: well coloured but frothy. Other effects sprang from sympathy of the vision with digestion.

[The Plan]:

1. The weakness of the digestion should be aided;
2. The head and nervous system should be strengthened;
3. The causative fault, both when received into the head and about to be received, should be diverted and removed.

---

26 Plans set out and numbered like this are common in practicae; this one, borrowed from Horst’s Observationum, is the only example in Hall; see Bylebyl, ‘Teaching Methodus Medendi in the Renaissance’, in Kudlein and Durling (eds), Galen’s Method of Healing, pp. 157-171.

1: Ante omnia, lenem primarum viarum evacuationem, per unc.i.s manna in brodio dissoluta.\textsuperscript{288} Iussi herbarum agrimoniae, toto cichorii in tusculo: iii sedes.

2. Purgatus:

3. His finitis, usus pulvere carminativo post pastum ut folio /94/, addita diamoschu dulce sc.i.

4. Rotulas capitales ordinavimus:

℞: speciei diamoschu dulcis dr.i, olei nucis moschati per expressionem sc.i, olei succini albi gut.iii, ambrae griseae gr.iiii, sacchari in aqua lavendulae soluti unc.4. Fiat confectio in rotulis, de quibus 2 vel 3 ieiuno stomacho sumantur.\textsuperscript{290} Quibus omnibus Deus ex alto benedixit, et rescrisit se magnum capitis levamen habuisse horum usu.

5. Attamen venas haemorrhoidas sanguisugis apperiere vellem felici successu. His Deo Optimo Maximo annuente, Dominus de republica bene meritus perfecte curatus.

Pro preservatione autumno sequenti, sequenti usus:

℞: radicis foeniculi, petrosellini ana unc.i, brusci, asparagi ana

\textsuperscript{288}Horst, Observationum [...] libri quatuor, p. 104: 1. imbecillitas concoctionis adiuvetur: 2 caput et nervorum genus corroboretur: et 3. peccans causa, tam in capite recepta, quam recipienda, derivetur et revellatur. Quoad primam intentionem, ante omnia lenem primarum viarum evacuationem per unc.i.s. mannae in brodio prunorum dissolutae. | \textsuperscript{289}see fn. page /19/. | \textsuperscript{290}Horst: Observationum [...] libri quatuor, p. 105: Quoad secundum intentionem rotulas capitales ordinavimus, quae \textit{R} spec. diamosch. dul. dr.i, olei nucis mosch. per express. sc.i, succini albi gut.iii, amb. grys. gr.iiii, sacch. in aq. fl. lavend. soluti unc.iiii. F. confectio in rotulis, de quibus 2 vel 3 ieiuno stomacho sumantur.

\textsuperscript{1} 1] in margin, as are numbers 2-5 below.
1. *First of all, a gentle evacuation of the main passages, with ½oz of manna dissolved in broth.* I prescribed herbs, agrimony and whole chicory, in broth: three stools.

2. He was purged:

℞: pills - of peony 1dr, amber, Ruffus's each 1sc, Fernel's for headache 2sc. Make 15 pills with betony water. Take 3 before sleeping: three stools in the morning.

3. When these were finished, he used the carminative powder on page /94/ after meals, with added sweet diamoschu 1sc.

4. *We prescribed rolls for the head:*

℞: powder for sweet diamoschu 1dr, pressed nutmeg oil 1sc, oil of white amber 3 drops, ambergris 4gr, sugar dissolved in lavender water 4oz. *Make a confection in rolls, take two or three on an empty stomach.* With all of these God blessed him from on high, and he wrote back that his head was greatly relieved by their use.

5. Nevertheless, I wished the haemorrhoid veins to be emptied with leeches. This was happily successful. These, by the favour of almighty God the most high, perfectly cured one who deserved well of the people.

He used the following for prevention, the following autumn:

℞: roots of fennel, parsley each 1oz, butcher's broom, asparagus

---

3 three stools] S.O. omits. 14 With...use] S.O. by which he found much ease. 17 These...19 people] S.O. omits.

addito pulvere diamoschu dulcis sc.i, confectionis alkermes sc.iii.
Mane rotulam unam vel alteram (folio /122/) quibus addebam
confectionis alkermes sc.i.

Postmodum pristinae indies sanitati caepit restitui. 292

[Case 136] Febris 3a ardens.
Baronetus Clarke de Brome Court, circa aetatis annum 57, febre
tertia ardentis corripitur, cum dolore stomachi et capitis. Urina

each 1½oz, sweet flag 2oz, agrimony, betony, maidenhair each ½ handulf, elecampane root 2dr, stoned raisins 1 handful, liquorice 1dr, broom flowers, rosemary each 1 pinch, anise seeds, sweet fennel each 2dr. Make a decoction in sufficient bugloss and borage waters for ½ pint. In the decoction infuse senna leaves ½oz, powdered rhubarb 2dr, cinnamon 2sc. Make an infusion in the coals overnight. Strain in the morning, add to the strained liquid chicory syrup with rhubarb 2½oz, /123/ Augsburg syrup 1oz, sufficient oil of vitriol for a pleasant acidity. Divide into 2 equal parts and pour into vials for 2 doses: four stools from the first dose, seven from the second.

After the preparation of the humour he was purged thus:

℞: pills - of peony 1dr, amber, Ruffus’s each 1sc, Fernel’s for headache 2sc, oils of sage, china 5 drops. Make 15 pills with betony water. Take 3 at bedtime, in the morning 2: five stools, and continue so. Then he is to use the powder as on page /122/, adding sweet diamoschu powder 3sc: in the morning 1 or 2 rolls (page /122/) to which I added alkermes confection 1sc.

After a while, I restored him. He regained, day by day, his former health.

[Case 136] Burning tertian fever.

Baronet Clark of Broom Court, about 57 years old: seized by a burning tertian fever with stomach ache and headache. Urine: red,
rubra et vitreum fregit in finestra collocata.

_Huic utenti meo consilio ita tribus dierum spacio, sic per Dei gratiam subveni._

R: poculi chymici unc.s, oxymellitis nostri unc.ii: vomitus vii, sedes viii. _Hoc epoto ore et alvo egessit plurima, et indies se omnia remisere et ad sanitatem declinare._ Die sequenti dedi decoctionem cornu cervi, de quo saepe in die caepit.

Summis laudibus decantabat, quibus Deus ex alto benedicat. His per iii dies administratis, victusque ratione conveniente non neglecta, pristinas vires optime recuperavit.

---

[Case 137] Anginae desperatae cura.

Comes Northamptoniensis circa aetatis annum 29, angina cruciatus cum inflammatione gutturis, interim febre comitante, _spiritus non nisi recte cervice trahitur, vox etiam laeditur._

_aegre alimentum transglutire potuit._

_Multa in ore adest humiditas et viscositas [...] semper a fluxionibus malum originem habet, quae in hoc malo e venis iugularibus atque e capite ipso derivantur._

_Eo enim magis periculosum hoc malum est, quo accidentia anginae_
and it broke the glass broke at the end of the collection.

He followed my advice, so that through God’s grace I rescued him within three days:

℞: the chymical cup $\frac{1}{2}$ oz, our oxymel 2 oz: seven vomits, eight stools.

After draining this, he discharged much upwards and downwards, and in a few days everything was ejected and he was bending towards health. The next day I gave hartshorn decoction, which he took frequently during the day.

He sang the highest praises of [these remedies] with which God might bless him from on high. After three days of treatment, not neglecting a prudent diet, he completely recovered his earlier strength.

[Case 137] Cure of a desperate quinsy.

The [second] Earl of Northampton, about 29 years of age: tortured by quinsy with inflammation of the throat, with an accompanying fever. He does not draw breath unless his neck is straight. Even speaking is painful, and he could swallow food only with difficulty.

There is much damp and viscous stuff in his mouth. The original disorder always comes from their flows, which are derived in this misfortune from the jugular veins and head itself. For the disease is all the more dangerous to the degree that the character of the sore throat is more powerful, while on the contrary, as it is

---

fuerint fortiora, ut contra, quanto fuerint debiliora, tanto minus periculosum.  

Imprimis venae sectio eiusdem lateris statim ab initio morbi sed ipse admittere noluit, sic ergo purgatus:

℞: foliorum senae unc.i, rhabarbari dr.iii, agarici dr.ii, cinamomi unc.s, seminum anisi, foeniculi ana dr.i, calami aromatici unc.s, liquiritiae dr.iii. Infundantur per horas 12 lege artis in aquae fontanae lib.iii. Bulliant deinde lento igne ad 3as. Coletur. Colatura adde syrupi cichorii cum rhabarbaro, diaserios ana unc.i.

Fiat.

Gargarismate hoc primis diebus uti tubebam [...]: diamoronis simplicis, mellis rosati ana unc.ii, aquae matrisylvae, plantaginis, hordei ana unc.4, oleorum vitrioli et sulphuris ana quantum satis ad acredinem. Calide et in ore tamdiu detinebat et quantum fieri poterit, intimas faucium partes ea leviter colluet, id equidem praestat

---

298Bruele, Praxis medicinae, pp. 157-158: eo enim magis periculosum hoc malum est, quo accidentia anginae fuerint fortiora, uti contra, quanto fuerint debiliora, tanto minus periculosum.  
299Bruele, Praxis Mmndicinae, p. 158: venae sectio fiet eiusdem lateris statim ab initio mali in omne angina.  
300Bruele, Praxis medicinae, p. 159: Conveniunt autem medicamenta liquida potius quam pilulae, cum eas ob transglutiendi difficultatem transmittere non possit. A fortiter autem purgantibus medicamentis hic consulto abstinebimus in principio mali, humores enim potius exagitabuntur, eaque ratione ad locum affectum ut liberius fluant, occasio dabitur.

4 noluit] nolit.
weaker so it is less dangerous.

Most important is: *venesection immediately on the same side as the illness started*, but he refused and was therefore purged in this way:

℞: senna leaves 1oz, rhubarb 3dr, agaric 2dr, cinnamon ½oz, anise and fennel seeds each 1dr, sweet flag ½oz, liquorice 3dr. Infuse for twelve hours by the usual method in spring water 3 pints, then boil on a slow fire, reduce to a third. Strain. Add chicory syrup with rhubarb, diasereos each 1oz to the strained liquid. Make it.

℞: of this (since it was to hand) 4oz, diasereos syrup, chicory with rhubarb each 6dr. Mix. *He could scarcely get it down because of the painful difficulty in swallowing.* Six foul-smelling stools. *One should abstain from more powerful purges at the beginning of the illness, for the humours will be stirred up, and for this reason is it gives them an opportunity to flux more freely to the affected part.*

Repeat the purge: eight stools.

_Gargle on the first days following as I prescribed:_

℞: mulberry simple, rose honey each 2oz, waters of woodbine, plantain, barley each 4oz, oil of vitriol and sulphur each sufficient for sharpness. *Hold it in the mouth hot and the amount as much as possible for a long time. It will gently wash out the inmost parts of the pharynx; and indeed it is better that the humours do not run so

---

12 One...15 part] S.O. omits.
ne humores ita libere in locum affectum irruant. Cataplasmate ex absinthio viridi et /125/ axungia adhibito mane et sero, felici successu.

Nocte inquieta a remotione cataplasmatis, petit consilium Dr Clayton Oxoniae, misit celeri cursu, omnes imminentem periculum timebant. Phlebotomare nolit. Statim cataplasmate sequenti a dolore et periculo liberatus:

℞: nidi hyrundinis cum toto, nempe stramine, luto et stercore hirundinum, N.ii. Bulliant in oleo chamaemellino ac liliorum.

Pistentur et setaceo cribro transmittantur. Addendo stercoris canis ossa comedentis unc.i, farinae, seminis lini et foeni graeci ana unc.i, unguenti dialtheae, axungiae gallinarum ana unc.s.

Fiat puls in modum cataplasmatis. Loco calide ad moveri iubebam, exoptato eventu.

Usus suffumigio succini, et tempore somni in ore tenebat trochischum sublinguaelem talem:

℞: succi liquiritiae, sacchari albi ana dr.i, seminum portulacae, cucumeris, meloni, citrulli mundatorum ana sc.i, amyli, tragacanthi ana dr.s, sacchari penidii sc.4. Fiat trochiscos.

Pro uxore et aliis angina laborantibus trochischos tales felici successu ordinabam:

---

8 nid[ ] nidum in both Hall and Valleriola; but both specify two nests (numero ii) at the end of the sentence.
freely in the affected area. Apply a plaster of green wormwood and fat in the morning and evening; happily successful.

As the night was sleepless after removal of the plaster, he requested advice from Dr Clayton of Oxford, and sent [for him] at precipitate speed. Everyone feared imminent peril.

He refused venesection but was instantly freed from pain and danger by the following plaster:

℞: two whole swallows’ nests, including straw, dirt, and swallows’ droppings. Boil in oils of chamomile and lilies. Pound them and filter through a sieve of bristles. Add droppings from dogs which have eaten bones 1oz, flour, linseed and fenugreek seeds each 1oz, marshmallow ointment, chicken fat each ½oz. Make a poultice in the form of a plaster. I prescribed it applied hot to the place, with the desired outcome.

He used amber fumes, and before sleeping held a trochee of this sort in his mouth, under the tongue:

℞: liquorice juice, white sugar each 1dr, husked seeds of purslane, cucumber, melon, water-melon each 1sc, starch, tragacanth each ½dr, barley sugar 4sc. Make trochees.

I have successfully prescribed trochees like these for [my] wife and others suffering from sore throat:

---

27Dr Thomas Clayton, M.D. (Oxon), 1575-1647: Raach, Directory, p. 36.

Dr ...7 plaster] S.O.: Dr Clayton from Oxford, yet would not be let blood, who prescribed the following cataplasm; [but see below: Hall takes the credit for the cure].

Make trochees] S.O.: for his wife and others. The recipe following is an interpolation without direct bearing on the present case.
℞: seminum papaveris albi sc.ii, gummi tragacanthi, Arabicae ana
dr.s, seminum portulacae, meloni excortici, cucumeris, citrulli
mundi ana dr.s, succi liquiritiae dr.s, sacchari rosati, penidii ana
dr.ii. Cum syrupo de papavere fiant trochischi parvi.

Sed praescriptis contentus his solis ante adventum Doctoris.

Auxilium, Laus Deo Christo Iesu salvatori nostro optimo maximo
praesens sensit, fauces apertae, tumor et inflammatio tonsillarum ac
uvulae sublata atque facile traxit spiritum et facile glutivit, et mihi
salarium magnum dedit, et postea saepe ingentes reddebat

gratias.303

Rite folio /126/ collocari loco:

Sed sequentem adhibebam (cataplasmate adhibeto, quae omissa
fuerunt in folio praecedenti).

**Gargarismum:**

℞: aquae plantaginis lib.i.s, scabiosae unc.4, florum rosarum
rubrarum dr.i, corticis granatorum dr.s. Bulliant unica levi,
ebullitione deinde co lentur. Colaturae adde syrupi diamoronis, mellis
rosati ana unc.ii. Misce.304 Colluebat os cum hoc gargarismate
saepe in die.

Deinde coch.semis sequentis eclegmatis deglutiebat:

℞: syrupi capillorum veneris, syrupi liquiritiae ana unc.s,

levi ebullitione, deinde colaturae adde diamoronis sy. granat. ana unc.i mis. pro
gargarismate.

7 sensi] sentit. 11 Rite...loc] Hall must have completed the case report, then
decided to add a treatment missing from the previous page.
℞: white poppy seeds 2sc, gums of tragacanth, Arabian each ½dr, husked seeds of purslane, melon, cucumbers, water-melons each ½dr, liquorice juice ½dr, rose sugar, barley sugar each 2dr. Make small trochees with poppy syrup.

But in fact the Earl was satisfied with [the preceding] prescriptions alone, before the Doctor arrived. He felt their present help, praise to God, Jesus Christ, our almighty and most high Saviour. His throat was opened, the swelling and inflammation of the tonsils and uvula lifted, and he breathed and swallowed easily.

He gave me a large payment, and often afterwards thanked me greatly.

On the correct page: /126/ put in place:

But I used the following, (applied as a poultice which was omitted from the preceding page).

A gargle:

℞: plantain water 1½ pints, scabious 7oz, red rose flowers 1dr, pomegranate rind ½dr. Simmer once, boil, then strain. To the strained liquid add mulberry syrup, rose honey each 2oz. Mix. He rinsed his mouth with this gargle frequently during the day.

Then he drank half a spoonful of the following linctus:
℞: maidenhair syrup, liquorice syrup each ½oz, cold diatragacanth

---

5 the Earl was satisfied with the preceding prescriptions alone before the Doctor arrived] S.O.: but he contented himself with the former. 12 On...place] Hall had already concluded in his usual way, then added an omitted recipe, though its description (a poultice) does not match what follows.
diatragacanthi frigidi in tabulis dr.i.s, syrupi diamoronis unc.s,
syrupi papaveris ad reprimendam salcedinem unc.s. Misce. Fiat
eclegma.

Potus ordinarius pro uno die:

℞: liquiritiae, seminum anisi, ficuum, passularum solis ana unc.i.

Bulliant in lib.4 aquae fontanae ad consumptionem librae.

His cito, tuto, laus Deo, Comes curatus. Ruland dat coch.s
nimurum dr.iii olei ligni Heraclii, quo fauces et partes affectas
colluebat.305 Arcanum.

[Case 138] Icteritiae citrinae cura.
Generosa Stoker, circa aetatis annum 44, pedissequa Generosae
Sheldon de Weston, icteritia per totum corpus sparsa cum dolore et
torminibus dextri lateris, in mortis periculo ab amicis diiudicatur.

℞: electuarii de succo rosarum dr.ii, diacatholiconis dr.i.s,
diaphaeniconis dr.ii.s, rhabarbari sc.i, spicae gr.v, syrupi cichorii
cum rhabarbaro unc.s, aquae cichorii unc.iii. Fiat haustus: ii
sedes.

Icteritia, constipacione ventris misere oppressa, nam semper
alvus astricta. \(127\) Venae sectio ad unc.4 (nam in maiore
quantitate nolem quia sanguis frenus cholerae). A vene sectione a
dolore lateris liberata.

℞: ammoniaci dr.i, oxymellitis unc.ii, aquae agrimoniae unc.i, et sic
per 4 dies. Rite purgata. Gelatinum praescripsi ex rasura cornu
cervi unc.i, lumbricorum N.10 cum singulis rubeis in collo et vino

305Ruland the Elder, ‘Centuria III’, Curationum [...] centuriae, p. 222: ex solo
olei ligni Heraclii, de quo dabam dimidium cochlear, nimirum circa drach.iii
quo fauces et partes affectas colluebat.
tablets 1½dr, poppy syrup to reduce saltiness ½oz. Mix. Make the eclegma.

His ordinary drink for one day:
℞: liquorice, anise seeds, figs, raisins each 1oz. Boil in 4 pints spring water until a pint is gone.

These, praise God, cured the Earl quickly and safely. Ruland gives ½ spoonful, equal to 3dr, of oil of hazel wood, with which he rinsed the throat and parts affected. This is a secret.

[Case 138] Cure of yellow jaundice.

Mrs Stoker, a gentlewoman, aged about 44 years, companion to Mrs Sheldon of Weston: with jaundice spread over the whole body, pain and torment in the right side. Her friends judge her to be in danger of death.
℞: electuary of rose juice 2dr, diacatholicon 1½dr, diaphoenicon 2½dr, rhubarb 1sc, spikenard 5gr, chicory syrup with rhubarb ½oz, chicory water 3oz. Make a draught. Two stools.

With the jaundice, she was wretchedly overwhelmed by abdominal constipation because her bowels were always bound.
℞: ammoniac 1dr, oxymel 2oz, agrimony water 1oz. Continue the course for four days. She was properly purged. I prescribed jelly of

[Case 139] Ulceris, gonorrhoeae virulentae cura.
Generosus Harvey, circa aetatis annum 65, Northamptoniensis, de
hartshorn shavings 1oz, worms 10, each one with red round the neck and washed in white wine. Boil in 1½ pints spring water, reduce to half. After boiling, add finely powdered saffron 1sc. Make jelly. Give two spoonfuls in broth with shoots of celandine, barberry bark, flowers of rosemary and marigold. Her drink: the hartshorn decoction.

A sweating drink of this sort:
℞: white wine 4oz, celandine water 3oz, saffron ½dr, Venice treacle 1½dr, bezoar stone ½sc, juice of goose droppings 3 spoonfuls.

Make a sweating drink. Dose: take 4oz on four mornings.

She is to use the following electuary in the evening:
℞: red and white sandalwood 3dr, currants soaked in white wine then sieved 4oz, rhubarb 1dr, saffron 1sc. Mix. Make the electuary. Dose: the amount of a hazelnut. These freed her from the jaundice.

On my advice she used the following electuary for ten days:
℞: steeled electuary 2oz, powdered rhubarb 3sc, powdered ammoniac 4sc, tamarind electuary ½oz, diatrion santalon 3dr. Mix.

Make the electuary: dose ½oz. She is to take exercise.

These, to God alone be praise, freed her from death within twenty days.

[Case 139] Cure of an ulcer, virulent gonorrhoea.

Mr Harvey, Gentleman of Northampton, about 65 years of age:

1 with red round the neck] S.O. omits. 23 Case 139] S.O.: Observ. XLIII [Second Century], pp130-131. 24 Mr...Northampton] S.O.: One of Northampton [it is not clear why this identity should be concealed.
ardore et stillicidio urinae cum ulcere in orificio vesicae conquestus.

/128/ A me anno praeterito aqua stillititia lactis et albuminum ovorum cum malvia, qua usu longe melius se habuit. Multorum medicorum opiniones discrepantes habuit. Mea opinio nunc et ut antea quod ulcere sordido in canali vergae laborabat, nam pus in fundo matulae mucosum vidi, porro cum urina per penem vidi et ramentorum excretionem et tumorem sub scroto. Praeterea stillicidium et ardorem urinae in extremitate vergae sentiebat, cui sequentia remedia inveniebam.

Potio diuretica et cathartica: usus est potione terebinthinae ut folio /95/, per 8 dies. Potus ordinarius, cremor hordei seu potius aqua hordei cum malvia et liquiritia. Tempore huius laminam plumbeam plurimis foraminibus perforatam, regioni renum applicare iubebam, saepiusque mutetur.

Die et nocte iniectionem sequentem ordinabam:

℞: trochischorum alborum Rhazis sine opio dr.i.s, lapidis calaminaris (id est cadmiae fossilis), tutiae praeparatae ana dr.i, plumbi usti et loti aqua plantaginis, boli Armeni purissimi ana dr.ii. Fiat pulvis subtilissimus, cuius dr.i misceatur cum decocto sequenti, et iniiciatur, addendo dr.i mucilaginis gummi tragacanthi, factae cum aqua plantaginis.

℞: ramulorum equiseti, foliorum plantaginis ana M.i, radicis consolidae unc.ii, rosarum rubrarum p.i, corticis granatorum dr.ii. Conquasantur, decoquantur in aqua chalybeata.306

complained of burning and dribbling urine and an ulcer at the mouth of the bladder. /128/ The previous year I gave him distilled water of milk and egg white with mallow which made him much better. He received differing opinions from many physicians. My opinion, now as before, is that he suffered from a dirty ulcer in the penile urethra, for I saw mucous pus at the bottom of the chamber-pot. As he was passing urine, I saw little pieces being excreted with the urine from the penis, and swelling under the scrotum. In addition he felt the urine dribbling and burning at the end of his penis. I contrived the following remedies for these.

A diuretic and cathartic potion: he used the turpentine potion as on page /95/ for eight days. His ordinary drink: barley cream, or better, barley water with mallow and liquorice. At the same time I prescribed lead sheet with very many perforations, to be applied to the area of the kidneys, and changed often.

I prescribed the following injection for the day and night:

℞: Rhazes’s white trochees without opium 1½dr, calamine stone (that is, cadmium dug up), prepared tutty each 1dr, lead burnt and washed with plantain water, the most refined bole Armeniac each 2dr. Make a very fine powder. Mix 1dr of it with the following decoction and inject, adding 1dr of gum tragacanth mucilage made with plantain water.

℞: horse-tail fern twigs, plantain leaves each 1 handful, daisy roots 2oz, red roses 1 pinch, pomegranate rind 2dr. Beat, boil in steeled

---

Sed finito lacteo illo liquore sequentibus usus est tabulis:

℞: trochischi de alkekengi cum opio unc.s, radicis consolidae, terebinthinae coctione induratae ana dr.i. /129/ sacchari unc.i.s. Cum infusione gummi tragacanthi fiant trochischi sc.ii ponderis.³⁰⁸

Capiat cum lacte vel aqua stilliticia ovorum, mane per plures dies.

Fistulam plumbeam in virga immitti iubebam et ibi remanet quamdiu sinere potuit, vel candelam ceream, tenuem flexilem et longam sensim in ductum hunc aliquoties intruderet, inunctam unguento de mineo vel rubro camphorato.³⁰⁹ In tumorem scroti per plures dies decoctionem novam sarsaparillae pinsare iubebam et semper gestabat laminam plumbeam circa renes. Ab ardore urinae penitus liberatus.

Nunc gonorrhea lancinatus, cui pulverem sequentem per 10 dies praescripsi:

℞: sarsaparillae unc.i.s, corticis ligni guaiaci unc.s, cinamoni optimi dr.s gr.15, senae dr.ii, epithymi, radicis ellebori ana dr.i, sacchari albi ssimi unc.i. Misce, fiat pulvis et dividatur dr.i.s pro dosi, aliquando omitti elleborem et epithemem.³¹⁰

When the milky-white water was finished, he used the following tablets:

℞: winter cherry trochees with opium ½oz, comphrey roots, turpentine cooked dry each 1dr, 2½oz. Make trochees with gum tragacanth, 2sc by weight. Take with milk or distilled water of eggs in the morning, for several days.

I prescribed a lead tube to be placed in the penis, to remain there as long as he could hold it, or a wax candle, thin, flexible and long, was slowly inserted into the channel several times, covered with ointment of red lead or red camphor. For the scrotal swelling I ordered a fresh decoction of crushed sarsaparilla for several days, and he always wore a lead sheet over the kidneys. He was completely freed from the burning urine.

Now he was attacked by gonorrhoea, for which I prescribed the following powder for ten days:

℞: sarsaparilla 1½oz, guaiacum bark ½oz, best cinnamon ½dr 15gr, senna 2dr, dodder, hellebore root each 1dr, best white sugar 2oz.

Mix. Make the powder and divide into 1½dr per dose. Sometimes the hellebore and dodder is omitted.

These made him well, and he rode to London. It started again, by some fate unknown to me. He asked advice from the most

---

8 I...12 days] S.O.: For many days a leaden pipe was put into the yard, and there kept (which was anointed with ung. rubrum), as long as he could. His cods being tumified, were anointed with ung. de minio. 13 and...kidneys] S.O.: omits.
petebat, cujus consilio sequenti usus:
℞: trochischorum albi Rasis unc.s, trochischorum Gordoni sc.i, aloes optimi dr.ii.s, penidiorum dr.i.s, aquae plantaginis lib.s. Fiat iniectio.

Usus electuario quantitas fabae hora cubitus:
℞: trochischi alkakengi cum opio unc.s, syrupi ex succo limonum quantum satis, gummi tragacanthi, masticis cristallae praeparatae, coralli praeparati ana sc.i. Fiat electuarium. His iterum restitutus. His itaque omnibus rite administratis continuo ac expedite meire coepit ac belle habuit.

Anno sequenti ad fontem St Vincenti equitabat et usu aqua. Optime fuit. De caruncula debilitate, a chyrurgo fistula ferrea laesus et iterum relapsus, quem nunquam postea curare potuit.

[Case 140] /130/ Matricis suffocatio et convulsio oculorum et menstruum obstructio.
1631 Februarii i: Generosa Maria Combes, opidana circa aetatis annum 13, duobus ab hinc annis lunarem evacuationem satis copiosam, singulis mensibus habuit; ab aetatis anno undecimo copiosa fluere incipiebant, nunc ob maerore et variolis retenti. Sentiebat primo in oculo dextro convulsionem levim (ut verbis eius utar, a twichinge as though hir eye was pulled inwarde, presently it would be gone), tandem ambo oculi convulsi cum summo capitis dolore. Cui pilularum cephalalgitarum Fernelii hora cubitus dr.s

18 1631 Februarii i| in margin.
learned Dr Harvey, and followed his counsel:

℞: Rhazes’s white trochees ½oz, Gordon’s trochees 1sc, best aloes 2½dr, barley sugar 1½dr, plantain water ½ pint. Make an injection.

He used an electuary, the amount of a bean at bedtime:

℞: alkekengi trochees with opium ½oz, sufficient lemon juice syrup, gum tragacanth, prepared crystal mastic, prepared coral each 1sc.

Make an electuary. These again restored him. After all of these had indeed been given, he began to pass water continuously and quickly, and was well.

The next year he rode to St Vincent’s well and took the waters. He was very well. On account of incapacity from a small growth [in the urethra], he was injured by a surgeon with an iron tube and relapsed again. He could never afterwards be cured.

[Case 140] /130/ Suffocation of the womb, convulsion of the eyes and obstructed periods.

1 February 1631. Mrs Mary Combe, a gentlewoman of Stratford upon Avon, about the age of thirteen: her periods started two years previously, satisfactory in quantity and every month. They started to flow plentifully from the age of eleven years, now are held back by sadness and smallpox. First she felt a slight convulsion in the right eye (in her own words, ‘a twichinge as though hir eye was pulled inwarde, presently it would be gone’) then convulsions in both eyes with very severe headache. I prescribed Fernel’s headache pills for

---

16 Case 140] S.O.: Observ.XLIV [Second Century], pp. 131-133. 21 by sadness and smallpox] S.O.: omits. 23 a twichinge as though hir eye was pulled inwarde presently it would be gone] In English in the Libellus.
devorare iubebam, ex quibus iii sedes, et sic die sequenti reiteratis pilulis. Tandem matricis suffocatione misere divexata. In ipso paroxysmo spacio 9 horarum cum levi intervallo remanebat.

Tandem nutu Dei et sequentis remediis, liberata:

Postremo unguento sequenti uti iubebam quo matricem perungî interius iubebam:

℞: musci gr.4, galliae moschati sc.i, olei lileorum quantum satis, vel unc.s. Misce, fiat unguentum, ex quibus expergïfacta et ad se reddebat.

Suffumigia ex quibus suffitus ad nares demittatur:

℞: castorei, galbani in aceto dissoluti ana unc.s, sulphuris unc.i, assae foetidae dr.i. Fiant trochïschì cum oleo de castoreò.

℞: pilularum de paeonia, de chamaepity ana sc.ii, olei salviae clysiae g.v. Fiant pilulae N.10. Dentur hora somni iii, adde extracti hysterici sc.ii. Ex duabus pilulis devoratis, die sequenti v vel vi sedes.

Die sequenti, suffocatione matricis iterum gravata, sed paroxysmus fuit parvus, attamen spacio unitis horae mutua in paroxysmo. Trochischis praedictis ignitis, naribus admotis, statim expergïfacta. Unguento quoque praedicto matricem inungere

---

311 See page /19/ | 312 Pharmacopoeia Londinensis, p. 9. | 313 Rueff, De Conceptu, f. 83v: ℞ musci sc.i, galliae muscatae dr.i, olei lileorum unc.ii. Misce et fiat unguentum. Suffumigia quoque ex quibus suffitus ad nares dimittatur sic parata proderunt. ℞ castorei, galbani in aceto soluti ana unc.s, sulphuris unc.i, assae foetidae dr.i. Si suffumigia vel trochischos parare volueris, cum oleo de castoreo conficiès.
this, ½dr to be taken at bedtime. This resulted in three stools, and
the same the next day when the pills were repeated. Then she was
wretchedly troubled by suffocation of the mother. The attack lasted
for nine hours, with slight intervals.

Eventually, by the aid of God and the following remedies, she
was freed:

℞: fume of horse’s hoof. I also gave water for the womb as described
in the Pharmacopoeia Londinensis. She drank 3 spoonfuls, at
intervals as she was able. I applied a plaster for the womb below
the umbilicus.

Finally I prescribed the use of the following ointment with
which I ordered the womb to be anointed from within:
℞: musk 4gr, musk galls 1sc, lily oil sufficient, or ½oz. Mix. Make the
ointment, by which it was aroused and restored to itself.

Fumigants, from which the fume is sent down to the nose:
℞: castor, galbanum dissolved in vinegar, each ½oz, sulphur 1oz,
assafoetida 1dr. Make trochees with castor oil.

℞: pills - of peony, of ground-pine each 2sc, oil of clary sage 5
drops. Make 10 pills. Give three hours before sleep, add water for
the womb 2sc. From swallowing two pills, five or six stools the next
day.

The following day she was again weighed down by suffocation
of the mother, but the attack was slight, though she was in the
paroxysm for a whole hour together. The above trochees, burnt and
applied to the nostrils, awakened her instantly. I also prescribed

iubebam. Duo cochlearias aquae hystericae dabam, se reluctante. 
Nox quieta. Iterum pilulas i devorare iubebam, hora cubitus. 
Mane me veniente, de dolore stomachi et capitis conquesta. 

Die 11 Februarii: febricula cum suffocatione parva afflicta. Ad praecautio:

March 28: Iterum incidebat in hystericum passionem cum oculorum convulsione. Oculi convulsi per duos dies antequam hysterica passione gravata.

℞: pilularum de paeonia, chamaepity, hiera cum agarico ana sc.ii, pilulae de succino, Ruffi ana dr.i, extracti hysterici dr.ii. Cum aqua hysterica fiat massa, ex quibus fiant pilulae 5 ex dr.i, auro coopertae; iii dentur hora cubitus.

His ab hysterica passione liberata. Laus Deo. 

[Case 141] Tumoris labri et naris rheumatis cura. 
Filia primogenita Dominae Harington, post variolas, tumore naris et labri nunc buccae laborat, cum rheumate e capite distillante; circa aetatis annum 10. 
℞: herbarum becabungea, nasturtii aquatici, cochleariae ana M.4, baccarum iuniperi lib.s, agrimoniae M.i, absinthii, cardui benedicti
the womb to be rubbed with the above ointment. I gave two
spoonfuls of water for the womb, though she was reluctant: the
night restful. Again I prescribed two pills to be taken at bedtime.
When I came in the morning, she complained of stomach ache and
headache.

11 February: She was vexed by a slight fever with a little
choking. For prevention:
℞: extract for the womb 2dr. Make 10 pills with sufficient water for
the womb. Give 1 pill on an empty stomach. She became well.

28 March: She fell again into a uterine passion with
convulsion of the eyes. She had convulsions of the eye for two days
before being weighed down by the uterine passion.
℞: pills - of peony, ground-pine, hiera with agaric each 2sc, of
amber, Ruffus's each 1dr, extract for the womb 2dr. Make a mass
with water for the womb, of which make 5 pills from 1dr; cover with
gold. Give 3 at bedtime.

These freed her from the uterine passion. Praise God.

[Case 141] Cure of swelling of the lips and nasal
catarrh.

Lady Harington’s first-born daughter: after smallpox, suffers from
swelling of the nose and lips and now the cheeks, with catarrh
dripping from her head. About ten years old.
℞: shoots of brooklime, watercress, scurvy grass each 4 handfuls,
juniper berries ½lb, agrimony 1 handful, wormwood, blessed thistle

4 she complained of stomach ache and headache] S.O.: I found her eased of
her pain of head and stomach. 19 Case 141] S.O.: Observ. XLV [Second

Pro labro, aquam Mercuriali Rulandi et lamina plumbea nocte adhibenda. Potus cervisia praescripta.

Hec cum continuassent, intra paucos dies sanatae simul labri ex toto. Anno sequenti me obiter videns, ingentes mihi gratias dabit.

Margaret Baker, aetatis 9, post variolas tumore nasi et labri defoedata, sequenti rite curata:

RITE curata.

[Case 142] Tormina ventris post partum.

Domina Rainsford, formosa et optima structura, 27 annos agens, interiectis tribus a partu diebus, tormine ventris misere lancinata, a quo ipsam vindicabam sequenti:

℞: albi in gallinae stercore in birea cum saccharo ad pondus dr.i.

---

314 There is a reference to this but without a recipe in Ruland the Elder, 'Centuria III', *Curationum* [... *centuriae*, p. 158. There is also a recipe for *aqua Mercurialis Alex. Ped* on p. 311. | 315 Ruland the Elder, 'Centuria III', *Curationum* [... *centuriae*, p. 158; hanc lotionem cum continuasset, intra paucos dies sanatae sunt manus ex toto.

8 Mercuriali | 16 Mercuriale | 8le.
each ½ handful. Boil in /132/ 5 gallons new beer, reduce to 4.

Take 2 pints of the strained liquid, senna 2oz, agaric ½oz, rhubarb 2dr, sarsaparilla 2oz, sassafras 1oz, colchicum 1½oz, liquorice 1oz, polypody 2oz, seeds of anise, caraway, coriander each ½oz, cinnamon 2dr. Strain. Add sufficient sugar to the strained liquid, make a syrup. ℞: of this 12oz, chicory syrup with rhubarb 2oz.

Dose: 3 or 4 spoonfuls.

For the lips: Ruland’s mercury water. Wear a lead sheet at night. To drink: the above beer.

When these had been continued, her lips were at once healed of everything within a few days. The following year she saw me in passing, and thanked me greatly.

Margaret Baker, aged 9, was disfigured after smallpox by swelling of the nose and lips. She was properly cured as follows:

℞: amber pills ½dr. Make 3 pills. Give before sleeping, and repeat for four days. She was rightly purged. Her lips were washed with Ruland’s mercury water.

She was rightly cured.

[Case 142] Abdominal torment after birth.
Lady Rainsford, good-looking and of very fine structure, approaching 27 years: wretchedly attacked by abdominal torment three days after giving birth, from which I reclaimed her with the following:

---

13 Margaret Baker] In Libellus this is part of Case 141, but S.O. separates it as Observ. XLVI [Second Century], p. 134. 20 Case 142] S.O.: Observ. XLVII [Second Century], p. 134.
Ventri quoque adhibere calide iubebam hoc:

℞: lactis noviter mulsi mellis ana lib.i, marrubii corticis M.i, farinae triticiæ unc.iii, croci dr.i. Bulliant ad consistentiam cataplasmatatis. His a tormentibus liberata.

[Case 143] Febris ardens continua, dolor capitis, haemorrhagia narum parva.

 Gratia Court, uxor pharmacopei, aetatis 27, ardenti febre eaque continua, lumbagine, haemorrhagia narum parva, dolore capitis cum delirio parvo, gravissime afficta. Iussi imprimis tundi venam et sanguinem extrahere ad unc.4 vel 5 (etiam si gravida spacio 14 septimanarum).

Eodem die cardiaco sequenti usa:

℞: cornu cervi praeparati sc.ii, speciei liberantis, pulveris Pannonici rubei, confectionis alkermes ana sc.ii, conservae berberorum unc.i. Omni 3ᵃ hora instar fabae devorabat.

Potus nullus altius nisi sequens:

℞: aquae fontanae coctae lib.iii, syrupi granatorum unc.i.s, iulapii rosarum unc.ii, spiritus vitrioli guttas tot quot satis ad gratam acetositatem. Plantis pedum, raphanum contusum sale et aceto rosaceo conspersum, 4ᵃ quaque hora adaptare vellem.

Pro linguae inflammatione gargarismum:

---

316Ruland the Younger, *De morbo Ungarico*, p. 194: Potus nullus altius, quam sequens. ℞ aq. fontanae clarae lib.iii, iulapii ros. unc.iii, spiritus vitrioli. rectif. guttas tot, quot suff. ad gratam acetositatem [see also pp. /30/ and /259/].

317Ruland the Younger, *De morbo Ungarico* p. 168: plantis pedum raphanum minutim incisum et contusum, acetoque rosac. et sale conspersum tertia quaque hora adaptare [see also /143].
℞: the white of chicken droppings in beer, with sugar to the weight of 1dr. I also prescribed this to be applied hot to her belly:
℞: fresh milk mixed with honey each 1 pint, horehound bark 1 handful, wheat flour 3oz, saffron 1dr. Boil to the consistency of a poultice.

These freed her from her torments.

[Case 143] Continual burning fever, headache, slight nose bleed.

/133/ Grace Court, the apothecary's wife, aged 27: very severely afflicted by a burning and continual fever, lower backache, slight nosebleed, headache with slight confusion. First I prescribed opening a vein and taking 4 to 5 oz (although she was in the fourteenth week of pregnancy).

She used this for stomach problems, the same day:
℞: prepared hartshorn 2sc, powder for liberans confection, red Pannonian powder, alkermes confection each 2sc, barberry conserve 1oz. She swallowed the amount of a bean every third hour.

She drank only the following:
℞: boiled spring water 3 pints, pomegranate syrup 1½oz, rose julep 2oz, spirits of vitriol the amount of necessary for a pleasing tartness.

I prescribed bruised radishes sprinkled with salt and rose vinegar, applied to the soles of the feet every fourth hour.

A gargle for inflammation of the tongue:

[S.O.: adds: The translator hath freed several from this distemper with chamomel posset-drink.  S.O.: wife to my apothecary [leaving open whether this means Cooke's or Hall's].]
℞: aquae fontanae clarae lib.ii, iulapii rosacei unc.i.s, spiritus vitrioli
guttas tot quot sufficit ad gratam aciditatem\textsuperscript{318} diamoronis simplicis
dr.vi, aceti rosati unc.i.  Hoc saepe in die os eluebat, et phlegmatibus

Si adsit maximus calor ℞ ung. ros. popul. ana unc.i, alabast. unc.s, ol. nymphaeae unc.i.s, camphorae sc.i.  M.
℞: clear spring water 2 pints, rose julep 1½oz, sufficient drops of spirit of vitriol for a pleasing acidity, mulberry simple 6dr, rose vinegar 1oz. She washed her mouth often during the day and, the phlegm being thick and also impacted, she rubbed the dried parts alternately with rose honey and butter to cleanse and remove it.

I prescribed this antipyretic to be applied on both wrists:
℞: populeon ointment 1oz, lots of spiders’ webs, a little walnut. Mix.

For back pain:
℞: ointments of populeon, rose each ½oz, alabaster 2dr, oil of water lilies 6dr, camphor ½sc. Mix. But since this oil was not to hand, she used the following:
℞: oils of scorpions, 2dr, almonds ½oz. Make it with 1oz of rose ointment.

For headache, this sort of oxyrrhodinum, which prevented the rising of the vapours:
℞: waters of roses, plantain, /134/ elder flowers each 3oz, rose oil, water of lettuce washed several times 1½oz, red sandalwood powder 1½dr. Mix. Soak linen cloths and apply to the head.

/oxyrrhodinum/ A generic name for a mixture of oil and water of roses, not a specific remedy. See also /143/.

378
apponantur.\textsuperscript{322}

Ne in carum incederet, usa est decoctione cornu cervi sequenti:

\textit{Ad cordis corroborationem et malignitatem citius debellandam, capiat omni die bis ieiuna ante haustus sumptionem de decoctione praedicto, magnitudinem nucis moschati alexipharmaci cordialis insequentis:}

\textit{℞: rob ribum, conservae carnis citri ana unc.i, speciei liberantis, magaritarum praeparatarum, smaragdi praeparati ana sc.i. Cum syrupi granatorum, fiat electuarium molle. Vesperti tertium bibitura haustum decoctionis cornu cervi, tantundem capiat de electuario cordiali.}\textsuperscript{323}

So as not to fall into a stupor, she used the following hartshorn decoction:

℞: pure spring water 2 pints, seeds and rind of citron each 1dr, prepared hartshorn ½oz, liberans powder 2dr. Boil, reduce by ½ pint. To the strained liquid add pomegranate juice and sufficient sugar for an agreeable tartness. Boil again, skimming all the time, and purify with egg white.

She took three draughts of this every day, one in the morning, the second two hours before lunch, and the third two hours before dinner.

To strengthen the heart and more quickly subdue the malice, take a draught of the above decoction every second day fasting beforehand, after the amount of a nutmeg of the following cordial:

℞: blackcurrant juice, conserve of citron flesh each 1oz, liberans powder, prepared pearls, prepared emeralds each 1sc. Make a soft electuary with pomegranate syrup. She is to take a draught of the hartshorn decoction on the third evening, take just as much of the cordial electuary.
Die 16: pulvis Pannonicus rubeus et postea glister:

℞: radicis altheae unc.i, herbarum 4 emollitivarum ana M.i, hordei p.i.s, cucurbitae unc.s. Fiat decoctio ad unc.12. Dissolvantur cassiae unc.i, mellis violarum unc.i, olei violarum unc.iii. /135/ Cum sale fiat glister.

Die 20 Iunii: evomebat vermem cum melancholia vitrea. Tunc dabam electuarium sequentem, instar fabae omni 3ᵃ hora:

℞: conservae rosarum vitriolatae unc.i, speciei diarrhodonis Abbatis dr.i, pulveris Pannonici rubei sc.i, conservae berberis quantum satis. Fiat electuarium.

*His remissionem paroxysmorum introduximus et illa mentis compos redderetur* et brevi tempore convaluit, et his finem curae imposui. Deo omnipotenti est gloria et honos in seculo seculorum. Amen.

[Case 144] Febris 3ᵃ notha, icteritia citrina, capitis dolor, lumbago, tormina ventris in gravida.

Comitissa Northamponiensis, generosa ex nobile stirpe nata moribus, et educatione insignis et omnibus naturae dotibus quae generosam mulierem decent, cumulati ornata, mireque formosa et pulchra; gravida 7 menses, in febrem 3ᵃ notham incidebat. Icteritia quoque citrina defoedata, torminibus ventris et capitis cruciata, lumbagine lacinata; circa aetatis annum 26.

---

16th: red Pannonian powder, and afterwards an enema:

℞: marsh mallow root 1oz, the four emollient plants each 1 handful, barley 1½ pinches, gourds ½oz. Dissolve in it cassia 1oz, violet honey 1oz, violet oil 3oz. /135/ Make an enema with salt.

20 June: She vomited a worm with greenish bile. I then gave the following electuary, the amount of a bean every third hour:

℞: vitriolated rose conserve 1oz, diarrhodon Abbatis powder 1dr, red Pannonian powder 1sc, sufficient barberry conserve. Make an electuary.

With these we brought on a remission of the attacks, and returned to her possession of her mind, and in a short while she regained her health. By these I set the end of her cure. To God almighty be glory and honour for ever and ever. Amen.

[Case 144] Bastard tertian fever, yellow jaundice, headache, lower backache, abdominal pain in pregnancy.

The [second] Countess of Northampton, a gentlewoman of noble stock, distinguished in character and education, richly endowed with all the natural talents which adorn a well-born mother, and remarkably beautiful: she fell into a bastard tertian fever when seven months pregnant. She was also disfigured by jaundice, tortured by abdominal pains and headache, and attacked by lower backache. Age: about 26 years.

Tunc icteritia per urinam maxime apparebat, calore febris egregie urgenti, deinde sudore maximo erumpente, sed paroxysmus altero brevior. In calore febre et sudore, decoctionem cornu cervi ex succo limonum libere coepit. Aquam rosarum in decoctionem admittere nequit.

Die quietis omni 3a hora sequentem electuarium instar fabae devorabat:
R: conservae berberorum unc.s, pulveris Pannonici rubei sc.ii, postquam semel degustavit abhorrebat, nam crustas berberorum non placebat. Gelatinum habuit ex rasuris cornu cervi cum floribus calendulis et croco.

22 Iulii: ante paroxysmum habeat gr.5 lapidis bezoar, et hora ante paroxysmum hypositaliam ut antea. Nunc quoniam pedisequas dabat hora ante paroxysmum paene totam hypositaliam, et febre irruente parum, causam fuit ut horrore et rigore iterum afflicta.

Sed ardor et sudor cito evanierunt et paroxysmus brevior sex horarum spacio.
After seeking my advice, she used the following. She does not want to be purged, nor do I wish it. I prescribed this posset ale an hour before the attack:

℞: flowers - marigold, rosemary each 1 pinch, blessed thistle ½ pinch, flowers and leaves of melilot 2 pinches. Boil in sufficient posset ale for ½ pint. Take half of it hot with a little sugar an hour before the attack. This delayed the onset of the attack for two hours. When it started to recur she drank the second half hot. She was freed from the fever, shivering and rigors.

Then the jaundice appeared very strongly in her urine, the heat of the fever following on rapidly. Very severe sweating broke out but the second attack was shorter than the previous one. For the hot fever and sweating she took plenty of hartshorn decoction with lemon juice. She would not take rose water in the decoction.

She swallowed the following electuary on the quiet day, the amount of a bean every third hour:

℞: barberry conserve ½oz, red Pannonian powder 2sc. But after taking it once she loathed it, because the barberry peels were unpleasant. She took jelly of hartshorn shavings with marigold and crocus flowers.

22 July: before the attack she is to take bezoar stone 5gr, and the posset ale an hour before the attack, as before. Now, because her companion gave her nearly all the posset ale before the attack, and only a little when the fever started, she was again afflicted by shivering and rigors. But the heat and sweating quickly passed,

2 nor do I wish it [S.O. omits. 18 because…unpleasant] S.O. omits.
22 Now...24 started] S.O. omits.
23: hora 5 matutina die quietis:
℞: tincturae coralli, magisterii perlarum ana gr.4, lapidis bezoar gr.5, pulveris Pannonici rubei gr.12, hora ante prandium et hora ante cenam.

24: Hora tertia matutina ante paroxysmum ut antea, et hypositaliam praedictam, febris secula mitis.

Iulii 25: ut 23.

28:
℞: cornu cervi praeparati, pulveris Pannonici rubei ana dr.s, aquae cardui benedicti unc.ii, syrupi papaveris rheadis unc.s, lapidis bezoar gr.4. Misce. Detur quinta hora ante paroxysmum, et herbae plantis pedum applicentur.

Calore veniente:
℞: syrupi papaveris unc.i, limonum unc.s, aquae scabiosae unc.ii, olei vitrioli gut.5, aquae celestis gut.vii. Misce.

Quibus paucissimis remedii intra 12 dies nobilis Comitissa optime convaluit, et a saevissimo et exitiali morbo liberata est. Deo optimo et misericordissimo, laus soli esto.327

Augusti uno: Frigore accepto, relapsa. Herbae pedibus

---

and the attack lasted less than six hours.

23rd: at five o'clock on the quiet day:
℞: coral tincture, magisterium of pearls each 4gr, bezoar stone 5gr, red Pannonian powder 12gr: an hour before lunch and an hour before dinner.

24th: at 3 o'clock in the morning before the attack: as before, and the above posset ale. The fever was mild at the time.

25th: as on 23rd.

26th: I prescribed wormwood, rue, feverfew, nettles in equal amounts, to be applied hot to her feet. Bruise and apply to the soles of the feet; the posset ale as before. For the forehead, as the heat came on: populeon ointment with opium. For the back: /137/ oxycrocium plaster, which entirely removed the backache. The fever was so faint that it could hardly be detected.

28th:
℞: prepared hartshorn, red Pannonian powder each ½dr, water of blessed thistles 2oz, field poppy syrup ½oz, bezoar stone 4gr. Mix. Give five hours before an attack, and apply the herbs to the soles of the feet.

When the heat is returning:
℞: syrup of poppies 1oz, of lemons ½oz, scabious water 2oz, oil of vitriol 5 drops, caelestis water 7 drops. Mix.

The noble Countess was completely healed by these very few remedies with twelve days, and was freed from a most savage and deadly illness. Praise be to God alone, the highest and most merciful.

applicatae duabus horis ante paroxysum. Pulsibus:

℞: unguenti populeonis unc.s, telas aranearum multas, nucis arboris parum,\textsuperscript{328} quae exterius motum caloris inhibeat, nimirum pulsibus ac temporibus populeum cum telis aranearum tempore paroxysmi, addita bombacis portiuncula appositum - Gregor Horst.\textsuperscript{329}

In rigore:

℞: aquae bezoarticae coch.s, lapidis bezoar gr.5, succi limonum coch.ii, ii horas ante paroxysum. Calore veniente, unguenti populeonis unc.s, opii in aqua rosarum dissoluti sc.s, temporibus applicatum.

Nobilis Domina cum gravissime iterum febre conflicta, his remediis curata cito, tuto, et valetudine firma potita est et gaudet. Postea filiam peperit formosam, et me obiter illuc veniente in ulnis filiam formosam gestantem vidi, et dixit Deo et mihi gratias pro ea dabat, nam sentiebat se vivere non potuisse.

\textsuperscript{328}Platter, Observationum [...] libri tres, p. 291 [See also /54/, 133].
\textsuperscript{329}Horst, Observationum [...] libri quatuor, p. 59;[see also preceding fn. and /54/, /133/.}
1 August: she relapsed after catching cold. The herbs were applied to her feet two hours before the attack. To the pulses:

℞: populeon ointment ½oz, a lot of spider webs, a little of a walnut tree, which restrained the outward movement of the heat. Populeon with spider webs was definitely applied to the pulses and temples, spread on a small piece of cotton - Gregor Horst.

For the rigor:

℞: bezoar water ½ spoonful, bezoar stone 5gr, lemon juice 2 spoonfuls, two hours before the attack. When the heat is coming on apply to the temples populeon ointment ½oz, opium dissolved in rose water ½sc.

The noble Lady, struck a second time with this most severe fever, was quickly and entirely cured by these remedies, and attained sound good health, and rejoices. She bore a beautiful daughter afterwards and, meeting in passing, I saw her carrying her beautiful daughter in her arms. She declared that she gave thanks to God and to me for her, because she had not thought that she could survive.

[Case 145] /138/ Inflammation of internal haemorrhoids.

The Reverend Fawcet, about 55 years old, a man distinguished for his learning: tortured by most dangerous and intolerable pain of the haemorrhoids. To help himself he tried many different remedies in

Habent n. haec vim dissoluendi, laxandi

\textit{16 sulphuris}♀. \textit{17 sulphuris}♀.
vain. He finally came to me and complained a lot about this hidden mischief.

To relieve it, apply hot milk kept warm, then tepid, then the following oil:

℞: linseed oil 2oz, and elder oil 1oz. Mix. Apply a little with a folded cloth.

Night and day:

℞: sufficient tapsi valentia and rub in. Everything was entirely curbed.

An ointment:

℞: populeon ointment 1oz, 1oz, dried powdered opium 1sc. Mix. Apply to the part. Rodericus de Fonseca though, recommends box-tree oil, and says it is the equal of anything. It is a narcotic, even for toothache, which it always allays wonderfully by its strength. It alleviates both other pains and is especially good at allaying that of haemorrhoids if a drop or two is put on them with a pen wrapped in cotton wool. Also it may be mixed with linseed oil, mixing up to 1oz with 1sc of box-tree oil. Alternatively, flowers of sulphur with turpentine washed many times in rose water, and apply it in place of balsam sulphur. It has power to melt away, loosen and open internal haemorrhoids so that they drain blood, because one should be in the habit of attending to this especially in this condition.

\[\text{12 Rodericus...22 condition} \ S.O.: \text{omits.}\]
Sed praedicto a dolore liber sanusque factus.

[Case 146] /139/ Pulmonis suffocatio.

Anna Warda opidana, honesta, formosa, pia, religiosa, 
amore quam 
alvo nigra evacuabat.\textsuperscript{333} Postea suffocatione pulmonum
strangulata, ut omnes mortem expectabant. Loqui non potuit,
anhelitum emittebat sonoriferum, et sic per horam. Me domum
veniente, me vocabant parentes. Statim orificio stomachi
curcubitulum magnum applicabam, et incantamenti similiter
articulate loqui potuit, et sic bis ante Generosae Goodyear et
Generosae Savage quae in mortis periculo ab omnibis relictae.

Nocte rotulam pectoralem nostram in ore tenere iubebam.

G blister:

℞: olei carminativi Quercetani diacolocynthidos unc.ii, decoctionis
carminativum pro glistere lib.s.\textsuperscript{334} Sedes ii.

Die sequenti:

℞: electuarii de tamarindo unc.s, de succo rosarum unc.iii, tartari
cremoris sc.i. Cum saccharo fiat bolus: 8 sedes.

Curata, \textit{et artis laudum maxima evasit buccinator}.\textsuperscript{335} Laus

[Case 147] 1632. Melancholia ex utero, 

menstrua alba cum uterinis doloribus.

And so he was freed from the above pain, and made healthy.

[Case 146] /139/ Choking of the lungs.

Anne Ward of Stratford upon Avon, respected, good-looking,
devoutly pious: passed black matter upwards and downwards.
Afterwards she felt strangled with choking of the lungs, so that
everyone expected her death. She could not speak, breathed with
loud gasps and continued so for an hour. Her parents called me as
I was coming home. I at once applied a large cupping glass to the
mouth of the stomach, and as if by a spell she was able to speak
distinctly. (Twice before it was the same, with Mrs Goodyeare and
Mrs Savage gentlewomen, whom everyone had forsaken in peril of
death).

I prescribed our pectoral roll to be held in the mouth at night.

An enema:

℞: Du Chesne’s carminative diacolocynth oil 2oz, the carminative
decoction for enemas ½ pint: two stools.

The next day:

℞: electuaries of tamarinds ½oz, of rose juice 3oz, cream of tartar
1sc. Make a bolus with sugar: eight stools.

She was cured, and became the greatest trumpeter of praises of
the art. Praise God.

[Case 147] Melancholy from the womb, white
discharge with uterine pains.

3 Case 146] S.O.: Observ. LI [Second Century], pp. 139-140. 4 respected
S.O.: diacathol. 21 trumpeteter of praises of the art] See also page /147/.
Generosa Finnes, nobilis ex praesapia Baronis de Wimbelton, annorum 22, uxor filii primogeniti vicecomitis Say et Seale: pia, formosa, religiosa, si quae altera mirae indolis et omnibus naturae dotibus quae nobilem mulierem decent cumulate ornata.

His symptomatibus misere afflicta: menstrorum obstructione spacio duorum mensium, et cum tempore idonea /140/ et quantitate laudabili fluebant, malum colorem aqueum habuerat, cum summis uterinis doloribus.

Praeterea anhelitu difficili cum cordis tremore et palpitatione quasi pectus rumperetur. Post somnum aegrotat cum ventris tormine, et circa umbilicum rasionem sentit, sed misere his doloribus circa tempus fluendorum menstruorum afflicta. Flatu rumpante, longe melius.

Praeterea rem duram in ventre sentit movere, sicut infans, sed pannis callidis applicatis, dolor flatu removetur. Dolore splenis cruciata, alborum fluxu demaciata, lumbagine gravata, levi vertigine afflicta, ita ut hoc et illuc quasi temulentam movet et sentit domum circulariter moveri.

Praeterea scorbuto per longum tempus emaciata. Cum ad eam in lecto decumbentem venissem ac omnia symptomata iudicassem, iudicabam ex scorbuto originem malorum ortam, quorum malorum curam talem in nomine Dei capessebam.

℞: pilularum de succino dr.ii, Ruffi dr.i. Fiant pilulae N.5 ex drachma. Capiat iii hora cubitus, mane ii. Harum pilularum multa

---

336Valleriola, Observationum [...] libri sex, p. 67: et omnibus naturae dotibus quae generosum hominem decent, cumulate ornatus [See also p. /135/].
Mrs Fiennes, a gentlewoman of the noble stock of Baron Wimbledon, 22 years, wife of the first son of Viscount Saye and Seale, devoutly pious, good-looking, as full of remarkable inborn qualities as anyone and richly endowed with all the natural talents which adorn a noble woman: has been wretchedly afflicted by these symptoms - menstrual blockage for two months. At the time they flowed in laudable quantity, they had a bad watery colour, with very severe uterine pain.

In addition there is shortness of breath with trembling of the heart, and palpitations as if her chest is going to crack. She is unwell with abdominal pain after sleeping, and feels a tearing sensation round the umbilicus. She was wretchedly afflicted with these pains around the time of her menstruation. She feels much better after passing wind.

She also feels something hard moving in her belly, like an infant, but the application of hot cloths removes the pain with the wind. She is tortured by splenic pain, emaciated by the white flux, weighed down by lower backache, afflicted with slight giddiness so that she staggers as if drunk and feels the house spinning round her.

She had also been emaciated by scurvy for a long time. When I had visited her, lying in bed, and studied all the symptoms, I judged that the origin of the evil had its roots in scurvy, of which I undertook the cure in this way, in God’s name:

℞: pills - of amber 2dr, Ruffus’s 1dr. Make 5 pills from a drachm.

1 of ... 5 woman[ S.O.: wife to the Lord Say’s eldest son, a very religious excellent woman.
et felici operationem statim revalescebat optime.\textsuperscript{339}

Pro flatu:

Rescripsit die 16, quod massas carneas multas instar hepatis e matrice expellebat cum torminibus sicut in partu, quae in aqua dissolvare nolent. Ad matricem mundificandam pilulis sequentibus usa:

\textbf{March 5:} pro 4 matutinis capiat dr.i tartari cremoris in iusculo. Hora elapsa, aquae nostrae chalybeatae sic compositae:

℞: olei sulphuris partem. i, spiritus vini partes ii. Bulliant in spatha ceu capula ferrea noviter fabrefacta, evaporando lento igne ad consumptionem humiditatis [...] hunc pulverem servabis in phialis optime clausis ne aer intret, quia resolveretur.\textsuperscript{340}

℞: huius pulveris dr.ii, impone in unc.4 aquae agrimoniae, et macerentur super cineres calidos. Usa est: ℞: huius aquae unc.s in iusculo, et utetur exercitio. Primo die evomebat, ut saepe accidet 2\textsuperscript{a}

\textsuperscript{339}Ruland the Elder, ‘Centuria II’, \textit{Curationum [...] centuriae}, p. 142: huius potionis multa et felici operatione statim revalescebat optime ac quasi miraculose. | \textsuperscript{340}Béguin, \textit{Tyrocinium chymicum}, pp. 389-390: Crocus Martis etiam cum oleo sulphuris sit: infundendo in cochlear ferreum, olei sulphuris et spiritus vini partes aequales, evaporando lento calore, ad consumptionem humiditatis: postea si resideat ad aliquot dies, invenies pulverem subtilissimum quem servabis in phialis optime clausis, ne aer intret, quia resolveretur. [Béguin gave du Chesne, \textit{Pharmacopoea dogmaticorum}, p. 244 as his source, but Hall’s wording is closer to Béguin’s].

\textsuperscript{14}tartari\(\textsuperscript{\textregistered}\).
Take 3 at bedtime, 2 in the morning. She grew very well again at once by the intense and happy working of these pills.

For wind:

℞: pleres archonticon powder 1oz, rose sugar 4oz. Mix. Take ½ spoonful after meals. After using these, her menstruation restarted in laudable quantities.

She wrote on the 16th, because she expelled large fleshy masses like liver from her womb with pain as if in labour. These would not dissolve in water. She used the following pills to clean the womb:

℞: pills - hiera with agaric, amber each 1½dr, Cyprus turpentine, Ruffus’s each ½dr. Make 20 pills. Give 3 at bedtime, 2 in the morning with an attendant. When these are finished take 2dr of pleres archonticon electuary, and take exercise.

5 March: Take cream of tartar 1dr in broth, for four mornings, an hour later our steeled water made in this way:

℞: oil of sulphur 1 part, wine spirit 2 parts. Boil in a pan or newly made iron cup, evaporate on a slow fire until the moisture is gone. You are to store this powder in vials, very well closed lest air gets in, because that melts it.

℞: of this powder 2dr, place in agrimony water 4oz, and soak over hot coals. She used: ℞: of this water ½oz in broth, and she is to take exercise. She vomited, as it often provokes, on the first day

9 would not dissolve in water] Demonstrating that they were solid matter, not blood clots.
vel 3a die non provocat. Verum hepatis restaurativum, conducetque omnibus morbis qui inde oriuntur, ut hydropisi et cachexia et morbo virgineo.341 Usa per 15 dies.

Horum usu, quasi miraculose revalescebat, quod soli Deo operanti omnia in omnibus adscribendum est, cuius nomen benedictum sit in infinita secula.342

[Case 148] Vermes, lumbago, dolor lateris, febris.

Francisca Finch, opidana aetatis 47, de praedictis conquesta. Sic, laus Deo, gratis curabam:

[Case 149] Delirium in puerpera.

341 Béguin, Tyrocinium chymicum, p. 390: Si aliquot grana in iuscule sive liquore congruo dentur, verum hepatis restauratum erit, conducens omnibus morbis, qui inde oriuntur, ut hydropisi et similibus. | 342 Ruland the Elder, 'Centuria II', Curationum[...] centuriae, p. 142.

13 xxx ob 53] in margin [reading obit 53 does not fit the patient’s dates, nor is a reference to case 53 feasible, as it is very different]. 16 tartari] ClassNotFoundException.
but not on the second and third. *This is a true restorative of the liver, and it will collect all the illnesses flowing from there, such as dropsy* and wasting and the green sickness. She took it for fifteen days.

Spread plasters - Foreest’s ammoniac, oxycrocium - on yellow silk, and apply to the spleen. She took pleres archonticon with sugar every day, nor did she neglect the antiscorbutic beer as on page /3/, diacubeb 2dr, in the morning. By using these *she grew well again as if by a miracle, which should be ascribed to the work of* God alone, whose name be blessed through endless ages.

[Case 148] Worms, lower backache, pain in the side, fever.

Frances Finch of Stratford upon Avon, aged 47, complained of the above. I cured her in this way, praise God, without payment:

/R: Dudley’s powder, prepared scammony each 14gr, cream of tartar 10gr, borage water 1½oz, syrup of roses ½ spoonful. She evacuated four times with a great many small worms. It was repeated the next day.

Cured.

[Case 149] Frenzy after childbirth.

Multis negotiis impeditus, visitare non potui. Sequentem felici successu praescripsi:

℞: syrupi artemisiae unc.i, electuarii lenitivi, diacatholiconis ana dr.iii, rhabarbari, castorei ana sc.s, aquae betonicae unc.iii. Misce.

Stomacho flatuum pleno evomebat: postea sine tormentibus 5 sedes ut rescripts vir eique.

23 Maii:

℞: foliorum malvae, violarum, betae, lactucae, boraginis ana M.ii, hordei unc.i, seminum cucumeris, cucurbitae ana unc.s. Fiat decoctio in satis quantum aquae ad unc.12. Coletur, colaturae adde olei violacei unc.iii/143/ cassiae recenter extractae, diacatholiconis ana unc.i, salis dr.i. Fiat glister.

Dein ob vigilitas et inquietudinem dabam syrupum sequentem:

℞: syrupi papaveris rheadis unc.i.s, syrupi violarum unc.s, aquae scabiosae unc.iii, aquae rosarum parum, olei vitrioli ad acredinem.

Item fronti apponere iubebam oxyrrhodinum tale:

\(^{343}\)Platter, Observationum [...] libri tres, p. 86: Puerpera iuvencula, non bene post partum purgata, in grave delirium subito nullo praegresso alio morbo, incidit, irascebatur illis potissimum, quos maxime amare debebet, marito scilicet et parentibus: multa tamen religiosa locuta, facie vehementer rubebat et oculis. Febris aderat acuta, quare phrenitidem veram esse statim iudicavi.
Mrs Jackson, a gentlewoman, devout, wife of the younger minster, about 24 years old: after childbirth, as she was not well purged, she fell suddenly into a severe frenzy with no other illness appearing. She was enraged, chiefly with those whom previously she had most loved, though she spoke much about religion. This happened at intervals. An acute fever appeared, from which I judged this to be a true phrenitis.

I was hampered by much business, so could not visit her. I prescribed the following with happy success:

℞: mugwort syrup 1oz, softening electuary, diacatholicon each 3dr, rhubarb, castor each ½sc, betony water 3oz. Mix. She brought up wind when her stomach was full, then five stools without torment, as her husband wrote.

22 May: venesection to 6oz. Blood: black and watery. Yet the frenzy was not entirely removed.

23 May:
℞: leaves of mallow, violets, beets, lettuce, borage each 2 handfuls, barley 1oz, cucumber, gourd seeds each ½oz. Make a decoction in sufficient water for 12oz. Strain. To the strained liquid add oil of violets 3oz. \[143\] freshly extracted cassia, diacatholicon each 1oz, salt 1dr. Make an enema.

Then because of sleeplessness and restlessness I gave the following syrup:
℞: corn poppy syrup 1½oz, syrup of violets ½oz, scabious water 3oz, a little rose water, oil of vitriol for acidity.

I also prescribed oxyrrhodinum of this sort, applied to the

---

13 as her husband wrote] S.O.: omits.
℞: olei rosaceum omphacini unc.iii, aceti rosarum unc.i, pulveris santalorum ruborum dr.i.s, aquae lactucae, plantaginis, rosarum ana unc.i. Fiat. *Gallinam per medium dissectam tepentem et cruentam capitis vertici iussi imponi*.\(^{344}\) *Plantis pedum raphanum [...]*

5 et contusum acetoque rosato et sale conspersum, tertiaque hora adoptare revulsionis causa.\(^{345}\)

℞: cassiae recenter extractae cum aqua betonica unc.i, syruпи rosarum solutivi unc.s, aquae buglossi, boraginis, violarum ana unc.i. Fiat haustus. Detur in aurora. *Item scarificationem in scapulis et humero adhibere iussi*.\(^{346}\) Haec tamen omnia praesentis medici iudicio submitto; mutanda, augenda detrahenda ut praesens occasio postulabat.

His solum modis medicamentis restituta, *atque sic Deo auxiliante convaluit per unicam septimanam, ab his exitalibus morbis et symptomatis*.\(^{347}\)

[Case 150] Febris continuae et 3\(^{ae}\) scorbutilae cura.

Maii 2: Generosa Woodwarde de Haven Dasset, virgo intacta, bene morata et optime dotata, attamen gibbosa, aetatis 28, sex ab hinc septimanis in febrem ardentem continuam incidebat. Tunc a

\(^{344}\)Platter, *Observationum [...] libri tres*, p. 86: Dein ob vigillias et inquietudinem dedi syrupum de de papavere dilutum. Oxyrrhodinum item fronti apone re iussi, [...] Gallinam per medium dissectam tepentem et cruentam, capitis vertici iussi imponis. | \(^{345}\)Ruland the Younger, *De morbo Ungarico*, p. 168: Plantis pedum, raphanum minutim incisum et contusum, acetoq. rosac. et sale conspersum tertia quaque hora adaptare [also pp. /133/, /178/].

\(^{346}\)Platter, *Observationum [...] libri tres*, p. 86. | \(^{347}\)Ruland, ‘Centuria VI’, *Curationum [...] centuriae*, p. 444.
forehead:

℞: omphacine oil of roses 3oz, rose vinegar 1oz, red sandalwood powder 1½dr, waters of lettuce, plantain, roses each 1oz. Make it.

*I ordered a chicken cut in half, to be placed still warm and bloody on the top of her head; on the soles of her feet radishes bruised and sprinkled with rose vinegar and salt, and changed every three hours to draw away [the humours].*

25th:

℞: freshly extracted cassia with betony water 1oz, loosening rose syrup ½oz, waters of bugloss, borage, violets each 1oz. Make a draught, give it at dawn. *I also prescribed the application of scarification to the shoulders and upper arm.* I submit all this to the judgement of the attending physician, for they should be changed, increased or decreased, as the existing circumstances demand.

She was restored by these medicinal methods alone, and with God’s help recovered from the deadly illnesses and symptoms within a week.

[Case 150] Cure of continual and tertian scorbutic fever.

2 May. Mrs Woodward, a gentlewoman of Avon Dassett, spinster of good character and greatly accomplished though hump-backed, aged 28: fell into a continual burning fever six weeks ago. Then,

---

medico purgatione et venae sectione, a febre continua ardente ad tertianam notham incidebat pernittosam, cum /144/ icteritia citrina, maculis quasi pulicum morsibus cutem summam faedentibus, in brachiis et multis aliis corporis partibus, quae principio erubescunt floridaeaeque sunt, qualia fere a nuperis pulicum morsibus in cute remanent stigmata.\textsuperscript{348}

His visis, scorbuto laborare affirmabam, nam saepe in febribus diuturnis et tertianis et quartanis scorbutus coniungatur. Nec me fefellit opinio, materia enim febrilis et vitiosa in meseraicis collecta et diutius haerens tandem dispositionem scorbuticam in diuturnis ducit, unde febris curatu difficiliores redduntur, imo non curantur (ut Eugalenus docet\textsuperscript{349}) nisi simul medicamenta, quae scorbutus requirit, adhibeantur.\textsuperscript{350} Habet icterus ortum non ex obstructione vesiculae fellis, sed ex flavo humore in epate a colluvie scorbutica laeso copiosus genito et in totum corpus effuso.\textsuperscript{351}

Sequentem methodum nomine Dei aggressus: menstruis carebat, constipatione ventris molesta. Me post paroxysmum veniente, symptomatibus febris sequentibus occurrebam, morbo in alium diem omissio:

℞: tincturae coralli gut.vi, speciei liberantis sc.s, manus Christi perlati sc.ii, lapidis bezoar gr.v, cum conservae berberis. Eodem

\textsuperscript{348}Alberti, ‘Schorbuti historia’, in Sennert, \textit{De scorbuto tractatus}, p. 395: quae principio erubescunt floridaeaeque sunt, qualia fere a nuperis pulicum morsibus in cute remanent στίγματα. \textsuperscript{349}Sennert, \textit{De scorbuto tractatus}, p. 86 [I have not identified the passage in Eugalenus to which Hall referred]. \textsuperscript{350}Sennert, \textit{De febribus libri IV}, p. 285: Saepe accidit in hisce regionibus, in febribus diuturnis et tertianis et quartanis scorbutus coniungatur. Materia enim febrilis et vitiosa in meseraicis collecta et diutius haerens tandem dispositionem scorbuticam induit; unde febres curatu difficiliores redduntur, imo non curantur, nisi simul medicamenta, quae scorbutus requirit, adhibeantur. \textsuperscript{351}Sennert, \textit{De scorbuto tractatus}, p. 123: Habuit ille icterus ortum non ex obstructione vesiculae fellis, sed ex flavo humore in epate a colluvie scorbutica laeso copiosius genito et in totum corpus effuso.
from purging and venesection by a physician, she fell from the continual burning fever into a dangerous bastard tertian with yellow jaundice, very disfiguring spots like flea bites all over the skin, on the arms and many other parts of the body. These at first grew red and florid, rather like the signs that remain in the skin after fleabites have faded.

Seeing these, I asserted that she suffered from scurvy, for scurvy is often joined with lasting and tertian and quartan fevers. Nor did my opinion fail me, for febrile and vicious material is collected in the meseraics and drying still further, finally induces the scorbutic condition. Further, (as Eugalenus says) they are not cured unless the medicines which scurvy requires are used. Jaundice has its root, not in obstruction of the gall bladder, but from yellow humour abundantly produced in the liver from decayed scorbutic matter and diffused through the whole body.

I followed the following method, in the name of God. She was without periods, and with a troublesome constipation of the bowels. When I came after an attack, I dealt with the following symptoms of fever, leaving the disease for another day.

℞: coral tincture 6 drops, liberans powder 1sc, Manus Christi pearled 2sc, bezoar stone 5gr, with barberry conserve. I instructed her to take the hartshorn restorative with pearled manus Christi

9 for... 15 body] S.O. omits. 18 When... day] S.O.: I coming on the intermitting day.
die, saepe de restaurativo ex cornu cervi cum manu Christi perlato
devorare iubebam, cum iusculo vitulino his herbis confecto:
becabunga, nasturtio aquatico, boragine, cichorio.

_Maii_ 26:

℞: speciei diaturbith cum rhabarbaro (quoniam aliud purgativum
non erat ad manus) sc.4. Maceretur per noctem in hyposaliam,
mane coletur et cum saccharo caepit. Me absente, 4 sedes sine
torinibus. Circa vespas hospitem ingratum expectabat cum
animae anxietate. Pulsibus unguentum antifebrificum pedibus,
absinthio, rutae, chamaemellae bullitis in aqua, et vesica impositis
applicare calide iubebam ante paroxysmum.

℞: speciei liberantis dr.ii, conservae berberis unc.ii. Saepe in die
capiat quantitatem fabae. Dabam aquam nostram antiscorbuticam
ut folio /110/.

Pro icteritia et scorbuto:

℞: ammoniaci pulverizati sc.ii, oxymellitis simplicis unc.ii, aquae
agrimoniae unc.i. Die quietis reiteretur ut opus est. Emplastro de
ammoniaco pro liene usa, electuarium diacrocuma instar nucis
moschati post pastum. A febre penitus liberata, nondum tamen a
scorbuto immunis.

_Iunii_ 13:

℞: vini chalybeati (ut folio /41/) unc.vi, syrupi cochleariae unc.iii,
becabungae, nasturtii aquatici ana dr.ii. Misce. Dosis sit coch.vi, et
utetur exercitio et omnia alia die:

℞: pilularum stomachicarum, Ruffi. Capiat pilulas iii ex dr.s, hora
cubitus.

Laus trino et uno Deo, rite curata. Videbam illam anno
often on the same day, with these herbs chopped up in veal broth: brooklime, watercress, borage, chicory.

/145/ 26 May:
℞: diaturbith powder with rhubarb (because no other purgative was to hand) 4sc. Soak overnight in posset ale, in the morning strain and give with sugar. While I was absent, four stools without pain. In the evening she awaited the unwelcome visitor with an anxious mind. I prescribed an antipyretic ointment to the pulses, with wormwood, rue and chamomile boiled in water for the feet, and [the same] applied hot in a bladder before the attack.

℞: liberans powder 2dr, barberry conserve 2oz. Take the amount of a bean often during the day. I gave our antiscorbutic water as on page /110/.

For the jaundice and scurvy:
℞: powdered ammoniac 2sc, simple oxymel 2oz, agrimony water 1oz. It was repeated on the quiet days as needed. She used the ammoniac plaster for the spleen, as much diacrocuma electuary as a nutmeg after meals. She was completely freed from the fever, though not yet exempt from the scurvy.

13 June:
℞: steeled wine (as on page /41/) 6oz, scurvy grass syrup 3oz, brooklime, watercress each 2dr. Mix. The dose should be 6 spoonfuls, and she is to take exercise, and every other day:
℞: Stomach pills, Ruffus’s. Take 3 pills [made from] ½dr at bedtime.

She was rightly cured, praise God the three and one. I saw her the following year, very well coloured and fleshed out, and she

11 liberans¹ S.O.: apply hot in bladders. 25 praise... 175.1 thanks] S.O. omits.
sequenti, optime coloratam et carnosam et mihi gratias dabat.

[Case 151] Iunii 27. Secundinae retentae et corruptae, [cura].

Generosa Hopper aetatis 24, post partum secundinae retentae et corruptae, ita ut frustulatim foetidae expelluntur, unde dirus foetor sursum ad ventriculum, cor, /146/ hepar et diaphragma et per consequens ad cerebrum ascendit, ut max dolores capitis, [...] deliquia plurima et sudores frigidi proveniunt, ita ut periculum mortis.  

Ad haec symptomata refraenanda, emplastrum sequentem umbilico imponi iubebam:

℞: colocynthidis decocti in aqua et succi rutae ana partes aequales, quibus miscerbis myrrham, semines lini, foenigraecum, hordei farinam ana cochlearium. Decoquantur omnia simul. Emplastrum autem ex his confectum, toto ventri ab umbilico ad pudenda imponatur.  

Unguento basilico matricem deungere iubebam:  
℞: castorei gr.vi, myrrhae, croci ana gr.iii, Mithridatii sc.s. Fiant pilulae N.iii. Detur circa horam 9 vel horam somni.  

His, laus Deo, 24 horarum spacio ex toto liberata.

---

352 Rueff, *De conceptu*, f. 25v: unde dirus foetor sursum ad ventriculum, cor, hepar et diaphragma, et per consequens ad cerebrum ascendit, unde max dolores capitis, praecordiorum, imminutio spiritus, deliquia plurima et sudores frigidis proveniunt, ita ut periculum mortis. | 353 Rueff, *De conceptu*, f. 26v: R colocynthidis decocti in aqua partem unam, et tantundem succi rutae, quibus miscerbis myrrham, semen lini, foenograecum, hordei farinam cuiusqu cochlearium, decoquantur omnia simul: emplastrum autem ex his confectum toto ventri ab umbilico ad pudenda usque imponatur. | 354 Rueff, *De conceptu*, f. 26r: In hoc casu unguento Basilico matricem deungere pro expellendis secundis itidem non parum proderit.

3 Iunii] in margin.
gave me thanks.

[Case 151] June 27. Cure of retained and corrupted products of conception.

Mrs Hopper, a gentlewoman aged 24: the products of conception are retained and corrupted after birth, so that small foul-smelling pieces are expelled. A foul smell rises thence to the stomach, heart, liver, diaphragm and in consequence to the brain, so that headache, many collapses and cold sweats soon ensue, with resulting danger of death.

To control these symptoms, I prescribed the following plaster to be placed on the umbilicus:

℞: colocynth decoction in water and rue juice equal parts, with which mix myrrh, linseed, fenugreek, barley flour each a spoonful. Boil everything together. Also, place a plaster of this mixture over the whole belly from the umbilicus to the pubis. I also prescribed anointing the womb with basilicon ointment:

℞: castor 6gr, myrrh, saffron each 3gr, Mithridate ½sc. Make 3 pills. Take them about 9 o’clock or at bedtime.

These, praise God, freed her from everything within twenty four hours.

---

[Case 152] Hysterica passio, loquela amissa, convulsio faciei et oculorum et totius corporis.

Archer opidana, molitrix brasii, subito convulsione faciei et oculorum rapta, loquela amissa, matrix e sede sua ferebatur.\textsuperscript{355} Sic sicut mortis imago iacuit, aliquando vehementer se huc et illuc oculis apertis movebat. Omnes in momento se mori expectabant.

Me praeidente, iussi pharmacopeum potionem sequentem cito praeparare.

Iubebam:

℞: castorei dr.i, succi rutae coch.i, aquae salviae dr.ii, syrupi artemisiae unc.i. Volens nolens hanc potionem devorabat, et assae foetidae naribus adhibere vellem. Spacio 3 minutarum loqui potuit, et astantes novit.

Die sequenti:

℞: speciei hierae cum agarico dr.s, pilularum foetidae, de paeonia ana sc.i, foeculae bryoniae, diagraidi ana gr.vi. Fiant pilulae 5.

[Case 152] Fit of the mother, loss of speech, convulsions of the face, eyes and of the whole body.

Archer of Stratford upon Avon, dealer in malt: suddenly seized by a convulsion of the face and eyes, and loss of speech. Her womb was carried off from its home. She lay there like the image of death. Sometimes she moved violently hither and thither with open eyes. Everyone expected her to die at any moment. Being present, I instructed the apothecary to prepare the following potion speedily.

I prescribed:

℞: castor 1dr, rue juice 1 spoonful, sage water 2dr, mugwort syrup 1oz. She drank this potion whether she would or not, and I wanted asafoetida applied to her nose. In the space of three minutes she recovered her speech, and recognised the bystanders.

The next day:

℞: pills, - hiera powder with agaric ½dr, foetidae, of peonies each 1sc, bryony dregs, diagrydium each 6dr. Make 5 pills, take in the morning with an attendant.

Finally:

℞: bryony root 3dr, senna leaves ½oz, ginger ½sc, cinnamon 1dr, sugar 1oz. Infuse overnight in 1½ pints milk whey kept warm. Administer the potion from this infusion on an empty stomach for some days, 5oz.

This cure, by the favour of almighty God most high and my...
medica; et voti compos [...] et artis [laudum] et Dei maxima evasit buccinator.

[Case 153] Febris in puerpera, dicta febris lactis.
Generosa Lewes, soror generosi Fortescue, puerpera tertia a partu die frigore accepto, incidebat in febre, frigore accepto cum ventris torminibus. Haec species febris dicta febris lactis nam cum lacte obstructa misere, modo frigore mox calore iterum frigore gravata in mortis periculo, quorum malorum curam talem capessebam, iuvante Deo.

Potus: dococtio cornus cervi praeparati, iulapium nostrum antifebrificum, cochlearia bina omni 4a hora. Iussi quoque glister ex lacte et saccharo sordido iniecrere, ventri origanum et maioranam calide pannis linneis involuta ventri applicare.

His cito curata.

Generosa Vernon de Hanberrey, uxor theologi, religiosa, formosa, pulchra, circa aetatis annum 30, de his conquesta. Sentit frigiditatem in plantis pedum, instar vaporis, frigidiorisque aurae in stomachum traduci per partium continuitatem, tunc misere
attentive care, made her entirely and quickly well, with the above cheap and opportune medical help. Her wish was granted, and she became the greatest trumpeter [of praises] of the art and of God.

[Case 153] Puerperal fever, called milk fever.

Mrs Lewis, a gentlewoman, Mr Fortescue’s sister: caught a cold three days after giving birth. She fell into a fever and caught a cold with abdominal pains. This sort of fever is called milk fever for when she was wretchedly obstructed with the milk, now cold then hot, again cold, she was oppressed in the danger of death. I undertook the cure of this wretched illness in this way, with God’s help:

A drink: prepared hartshorn decoction, our antipyretic julep: 2 spoonfuls every fourth hour. I also prescribed the injection of an enema of milk and unrefined sugar and origanum and marjoram applied to her belly, wrapped in a hot linen cloth.

These quickly cured her.

[Case 154] Confirmed scurvy, with various symptoms. 13 August 1632.

Mrs Vernon, a gentlewoman of Hanbury, the minister’s wife, devout, very beautiful, about 30 years of age, complained of these: she feels a cold in the soles of her feet like a vapour, and with the spreading of a colder wind into her stomach through the intervening parts, then

\textit{16 Tractatus de scorbuto} in margin.

413
feels wretchedly ill. Afterwards she was afflicted by hot spells, then
cold sweats, and was again very well in two hours. In addition she
was afflicted by melancholy, trembling of the heart and splenic pain,
as if it were squeezed by a hand held over the spleen /148/ with
great pressure.

She was attacked by toothache and pain in the gums, by lower
backache and the stone. Her whole body felt exhausted. She was
harassed by slight swelling of the feet in the evening. She was
wretchedly attacked by torments at the time of her periods, and
weakened by their excessive and irregular flux. She was often
troubled by fits of the mother, not freed from them until she cried.
Her thighs were at times disfigured by black spots. Her bowels
sometimes did not answer to their duty once within four days, then
again the flux would be let loose as if she were lifeless. Urine:

various colours, now turbid at which she felt better, then clear like
spring water, when [she felt] worse.

These are the symptoms with which the gentlewoman was
afflicted. For the causes see Daniel Sennert, Tractatus de scorbuto,
and Eugalenus.

I undertake her cure in the name of God who maketh sore and
bindeth up; killeth and maketh alive; hast power of life and death.

I prescribed taking an enema of this sort, because a few [items]
were missing:
℞: mallows, mercury, marsh mallow each 1 handful. Boil in
sufficient milk for ½ pint. In the strained liquid dissolve

4 as...great] S.O.: so that she was forced to press it hard with her hands. 15 now...
worse] S.O. omits. 17 These...21 death] S.O. omits. 20 maketh...death] I use the

8 tartar][프.]
diaphoenicon, diacatholicon each 6dr, Holland powder 1dr. Make an enema: three stools with wind. At bedtime: *London treacle* 2dr.

14th:

℞: brooklime, watercress each ½ handful, marigold and rosemary blossoms 1 pinch. Boil in sufficient milk whey for 1½ pints. To the strained liquid add sugar ½lb. Boil again and skim, then add saffron ½dr tied in thin cloth. Boil again once or twice, remove from the fire.

/149/ ℞: 8 spoonfuls of this decoction, Holland powder and tartar crystals each equal parts, the amount six pennies can hold. Fast for two hours, then broth with veal and herbs: borage, bugloss, brooklime watercress and chicory. Take lunch at the usual time, dine at about five o’clock. At bedtime, take *London treacle* as before.

She wrote to say she was much better. For the fits of the mother she used the *London water for the womb*.

For cold feet this plaster was applied:

℞: pitch 2lb, best gum powdered and sieved, best frankincense powdered each 2lb, sheep suet 1oz, saffron 2oz, mace 2oz, laudanum 4oz, cloves 1oz. Mix. Boil for the space of half an hour or longer. First put the pitch in place. Spread it on leather very thinly, so as to make plasters shaped like the soles of slippers. These are joined by sewing to a linen sock shaped to the sole of the foot. Use it on the soles for fourteen days, or for a month or for six weeks, then remove. This is certainly powerful in any pain whatsoever.

I cured old Mr Ferriman, a gentleman worn out by

Rite, laus Deo, convaluit.

[Case 155] /150/ Febris ardens cum convulsione faciei et tortura oris.

Tu Domine, qui vitae et mortis habes potestatem et deducis ad portas mortis et reducis; confiteor nulla humana ope, nullis artis praesidiis, nullo consilio, sed sola tua bonitate atque clementia, salvum me fecisti, et a saevissimis et maxime exitialibus signis, febrique lethali, praeter omnium spem atque expectationem redivisti et, quasi e orci faucibus ereptum pristinaeque sanitati restituisti.

Pro qua gratias ago tibi, misericordissimi Deus et Pater Domini nostri

---

367 Valleriola, Observationum [...] libri sex, p. 2: Domine, qui vitae et mortis habes potestatem, et deducis ad portas mortis et reducis [based on Vulgate, Sam. 2,6]. | 368 Valleriola, Observationum [...] libri sex, p. 1: ut ab sevissimis et maxime exitialibus morbis saepe homines liberentur [...] praeter omnium spem atque expectationem redivivus ad se, quasi e orci faucibus ereptus, redeat aeger, pristinaeque sanitati restituatur. Hoc ipsum nulla humana ope, nullis artis presidiis, nullo consilio, sed sola Dei bonitate atque clementia fieri, bene instituti hominis fuerit existimare.
longstanding pain in the feet, with this plaster alone.

For the swollen spleen: magisterial ointment for the spleen.

For backache, our nephritic plaster:
℞: opium 15gr, wax, lead each 2oz, oils of roses, water lilies each 2oz, nightshade juice 1oz. Boil in the form of a plaster. Make the plaster, spread some on leather and apply to the back.

For wind in the stomach:
℞: bugloss conserve 2oz, pleres archonticon powder 2dr. Dose: the amount of a nutmeg. She also used our antiscorbutic water with clove-gillyflower syrup. She took the above antiscorbutic beer and used their steeled wine.

She recovered rightly, praise God.

[Case 155] /150/ Burning fever with facial convulsion and spasm of the mouth.

You Lord, who hast power of life and death; thou leadest to the gates of hell, and bringest up again; I confess neither by human work, nor help from the art, nor advice, but only by your goodness and mercy you made me whole, and recovered me beyond all hope and expectation from the most severe and deadliest signs of a lethal fever, as if rescued from the jaws of hell and restored to perfect health.30 For this I give thanks to you, most merciful God and Father of our Lord Jesus Christ, who through your fatherly mercy has made me

---

\textsuperscript{369}Ruland the Elder, ‘Centuria III’, \textit{Curationum} [...] \textit{centuriae}, p. 231: Gratias ago tibi misericordissime Deus et Pater Domini nostri Iesu Christi, quod pro tua paterna misericordia et in praepotente manu tua aegrotos meus sanos facis. Da ipsis gratiam, ut grato animo et memoria agnoscam tua beneficia.

whole. Give me grace, that I may recognize and remember your blessings with a grateful mind. It was only on account of receiving so much from almighty God the most high, that I was raised from such a severe and deadly illness. So that my friends may rejoice with me, and the divine will of God and his unbounding power be admired, I report the whole story, faithful to the truth.

About the 57th year of age, from 27 August in the year of salvation 1632 to 19 September, I had been weakened by an excessive flux from the haemorrhoids. I nevertheless had to visit patients here and there every day, riding at great speed on a hard-mouthed horse.31 The flux of the haemorrhoids was checked for fourteen days. Then I was wretchedly attacked by toothache, and fell into a deadly burning fever (which was then seeking victims everywhere, and almost all who were infected exchanged life for death). Therefore what I used in this most severe fever as a method of driving it away, and by the help of which alone I was protected by the aid of God’s good will, I now put forward.

First I was purged in this way:

℞: rhubarb infusion 1dr, diasereos syrup 1oz, electuary of rose juice 3 dr, resulting in four stools. Next I used hartshorn decoction with this effect. The illness was well expelled in the urine so that at night fourteen chamber-pots were half filled (I ordered each passage

31Translation following Conrad Gesner, Historiae animalium liber i (Zurich, Frosch, 1551) p.532: equus durus (duri oris) difficulter flectitur [a hard horse (of a hard mouth) is steered with difficulty].

2 It...6 truth] S.O. omits. 13 which...15 Therefore] According to Lane, John Hall, p.xxiii, Birmingham had an outbreak of plague at about this time, but deaths in Stratford were not unusually high.
coactus, et quod mirum dictu, me non ultra lib.ii decoctionis cervi (omni alio potu interdicto) bibere (ita ut timebam hydropem matulae) et sic fluxu urinae 4 dierum spacio durabat. Ad maciem reductus vires exhaustae fuerat, ut in lecto movere sine servorum ope non potui. Habui etiam convulsiones oris et oculorum.

Spirante columba et dissecta, pedibus supposta, ut vapore ad ima revocantur, nam saepe delirio parvo afflictus.\textsuperscript{372}

Tunc uxor ad consilium duos medicos appellat. Usus fui glistere emolliente cum herbis emollientibus, et diacatholico, et lenitivis. A medicis amicis electuarium sequentem instar nucis moschati bis in die devorabam:

\textsuperscript{372}Donne, \textit{Devotions upon Emergent Occasions}, p. 284.

27 Septembris: sic purgatus:

R: electuarii de gemmis calidis dr.ii, speciei pleres archonticonis dr.i (ob metum scorbuti), manus Christi perlati unc.i, \textit{/152/} conservae buglossi, violarum ana unc.ii, luiulae unc.i, syrupi violarum unc.s, limonum unc.i, olei vitrioli gut.vi. Fiat electuarium.

Hora somni:

R: syrupum diacodii et papaveris rheadis cum diascordio.

Pro calore dorsi:

R: refrigerantis Galeni unc.i.s, cerati santalini unc.s, succi sedi, aceti vini ana coch.i. Fiat unguentum molle.

Emplastrum pro regione cordis:

R: labdani dr.vi, storacis calamitae unc.s, speciei aromatici rosati

\textsuperscript{21}refrigerantis\textsuperscript{| infrig.}
of urine to be stored in a single vessel) and as many in the day, for I was forced to pass urine every hour. Strange to say, I did not drink more than 2 pints of hartshorn decoction (all other drink being forbidden) for I feared dropsy of the chamber pots. The flux of urine continued thus for four days. I was emaciated, my strength exhausted, so that I could not move in bed without the help of servants. I had spasms of the mouth and eyes. *A breathing pigeon, dismembered, was applied to the feet, to draw the vapours down* for I was often slightly delirious.

Then my wife called in two physicians for advice. I used a softening enema with the emollient herbs, diacatholicon, and softeners. I swallowed the following electuary from my friends the physicians, the amount of a nutmeg twice a day:

℞: electuary of cold gems, 2dr, pleres archonticon powder 1dr (because scurvy was feared), pearled manus Christi 1oz. /152/

bugloss, violet conserves each 2oz, wood-sorrel 1oz, syrup of violets ½oz, of lemons 1oz, oil of vitriol 6 drops. Make an electuary.

27 September: purged thus:

At bedtime:

℞: diacodium syrup and corn poppies with diascordium.

For heat in the back:

℞: Galen’s cooling [ointment] 1½oz, sandalwood salve ½oz,

houseleek juice, wine vinegar each 1 spoonful. Make a soft ointment.

A plaster for the region of the heart:

℞: labdanum 6dr, styrax calamita ½oz, aromatic rose powder 4sc,
sc.4, mosci gr.4. Misce.

Iterum sic purgatus:

℞: syrupi diaserios unc.i.s, electuarii de succo rosarum dr.iii, aquae cichorii quantum satis.

Nota Bene: sed antequam medici ad me veniebant, e vena 5  
iececoraria unc.vii sanguinis extraxi, et 3a ab ista die, sanguisugae venis hemorrhoidalis applicata. Inde unc.x sanguinis, quantum coniectura, assequi possum extractum. Sed primo Deo, deinde decoctioni cornu cervi, postremo venae sectioni gratias ago.

Viribus bene restitutus, nam nunc cibum capere potui, antea nil nisi potus gratum. Usus vino chalybeato cum succo cochleariae, et syrupi sceletyrbici Foresti, et semel in septimana purgatus cum pulvere sancti et rhabarbaro infusione et diaserios.

Deus haec omnia fecit, cui soli sit omnis honor et gloria in secula seculorum. Amen.

Baronetus Puckringe, circa aetatis annum 44 plus minus, dolore capitis lancinatus, maxime mane et circa horas vespertas, nocte tamen quando super dorsum iacet, capite parum declinante

5 Nota Bene in margin. 21 xxx] Illegible, possibly Apr. or less likely Sep.: Hall left the year incomplete.
musk 4gr. Mix.

I was purged again like this:

℞: diasereos syrup ½oz, electuary of rose juice 3dr, sufficient chicory water.

NOTE: Before the physicians attended me, I took 10oz of blood from the hepatic vein, and the third day after that, leeches were applied to the haemorrhoidal veins. The 10oz of blood is an estimate of the quantity I could extract. But I give thanks first to God, then to the hartshorn decoction, and finally to the venesection.

I was quite restored to strength, for now I could take food. Previously nothing but fluid was welcome. I used steeled wine with scurvy grass juice, and Forees’s scheletyrbic syrup. Once a week I was purged with holy powder, rhubarb infusion and diasereos.

I was often wretchedly afflicted with toothache. I was completely cured with oil of hazel wood. Then I was wretchedly troubled by itching of the scrotum with excoriation. I was cured by our sarsaparilla decoction with antiscorbutic herbs.

God did all this, to whom alone be all honour and glory for ever and ever. Amen.

Baronet Puckering, aged about 44 years more or less: attacked by headache, worst in the morning and around the evening hours. He feels relief at night though, when he lies on his back with his head

---

levamen sentit. *Ego, divina aditus gratia, tales curandi ingredior viam*:373

℞: pilularum de paeonia dr.i, de succino, Ruffi, ana sc.i, cephalalgiarum Fernelii sc.ii.374 Cum aquae betonicae fiunt pilulae

N.15. Capiat ii hora cubitus, mane iii. His finitis, sanguisugae hemorrhoidis applicare iubebam, felice et exoptato eventu, nam a dolore capitis penitus liberatus.

Deinde usus opiata sequenti:

℞: ligni sassaphras incisi dr.vi, cinamomi pulverizati, calami aromatici ana unc.s. Infundantur in aquae buglossi unc.12 pro horas 24, deinde bulliant ad medias. Colaturae adde: conservae florum cichorii, buglossi ana unc.s, theriaca Alexandrinae dr.i, confectionis alkermes, de hyacintho ana dr.i.s, chalybis praeparati unc.i, diatironsantalonis, diambrae, diamoschu dulcis ana dr.s, lapidis bezoar sc.s, cornu cervi praeparati, margaritarum praeparatarum ana sc.ii. Fiat cum syrupo conservae citri opiata.

Deglutiat avellanae maioris magnitude de opiata praedicta, mane et hora cubitus.375 Frigore accepto in febrem quotidiam nocturnam incidebat,

℞: syrupi diaserios unc.ii, rhabarbari expressi dr.i, tartari cremoris sc.i, aquae betonicae unc.ii. Fiat haustus, quem retinebat per dimidiam horae, partem tunc evomebat, attamen 4 sedes habuit.

Cum syrupo cons. citrii, fiat opiata.

21 tartari | Q.
hanging down a little. *I undertake, with thanks to divine favour, to make a cure in this way:*

℞: pills - of peony 1dr, amber, Ruffus’s each 1sc, *Fernel’s for headache* 2sc. Make 15 pills with betony water. Take 2 at bedtime, 3 in the morning. When these were finished I prescribed the application of leeches to the haemorrhoidal veins. This had the happy and desired result, for he was completely freed from the headache.

Then he used the following opiate:

℞: sliced sassaphras wood 6dr, powdered cinnamon, sweet flag each ½oz. Infuse in bugloss water 12oz for twenty four hours, then boil, reduce to half. To the strained liquid add *conserves of chicory and bugloss flowers* each ½oz, *Venice treacle* 1dr, alkermes, *hyacinth confection* each ½dr, *prepared steel* 1oz, *diatrion santalon, diambra, sweet diamosch* each ½dr, *bezoar stone* ½sc, *prepared hartshorn, prepared pearls* each 2sc. Make an opiate with syrup of preserved citrons. *Swallow the amount of a large hazelnut of the above opiate, morning and bedtime.*

After catching cold he fell into a nightly quotidian fever; purged thus:

℞: *diasereos syrup* 2oz, *expressed rhubarb* 1dr, *cream of tartar* 1sc, betony water 2oz. Make a draught. He retained it for half an hour then vomited some, but still had four stools.
Die sequenti pro tussi et phlegmate:

Pro febre:

℞: aquae cordialis frigidae Saxoniae coch.ii, cum coch.iii iulapii:

℞: magisterii perlati dr.i, aquae scabiosae unc.4, syrupi veronicae rubrae unc.i, confectionis alkermes sc.i. A febre liberatus.

Postea usus condito Doctoris Lapwort in praeservationem sanitatis:

℞: conservae florum betonicae, caryophyllata hortensis (id est, vetonicae rubrae) ana unc.i, corticis citri conditi dr.vi, extracti calami aromatici dr.i, corticis winterani pulverizati sc.ii.s, seminum paeoniae dr.i, olei cinamomi gut.4. Cum syrupo betonicae quantum satis fiat conditum. Capiat instar nucis moschati. Usus saepe felici successu ut mihi dixit, idcirco vellem ut acciperet.

Pro liene:

℞: emplastri magisterii pro liene unc.i.s, diachylonis magistralis dr.vi, carannae in aceto scillitico dissolutae dr.4, radicis ellebori albi sc.ii, olei ligni Rhodii sc.i. Misce, fiat emplastrum. Super alutam extendatur, et serico cooperiatur et interbassatam applicetur lienis.
The next day, for cough and phlegm:

℞: maidenhair syrup, /154/ hyssop each 1 oz, magisterial scabious syrup ½ oz. Make a linctus with a pleasing taste. He regained his voice, and brought up large amounts of phlegm with a decoction of china with the capillary herbs, snails, yellow sandalwood, ivory shavings and hartshorn shavings, and a julep of the aperient decoction with syrup.

For the fever:

℞: cordial water frigida Saxoniae 2 spoonfuls with 3 spoonfuls of this julep:

℞: magisterium of pearls 1 dr, scabious water 1 oz, syrup of cloves 1 oz, alkermes confection 1 sc. He was freed from the fever.

Afterwards he used Dr Lapworth’s preserve to maintain health:

℞: conserve of betony flowers, clove-gillyflowers each 1 oz, conserve of citron peel 6 dr, extract of sweet flag 1 dr, powdered winter cherry rind 2½ sc, peony seeds 1 dr, oil of cinnamon 4 drops. Make a preserve with sufficient betony syrup. Take the amount of a nutmeg. He used this often with success and told me so, and on that account I wished him to take it.

For the spleen:

℞: magisterial plaster for the spleen 1½ oz, magisterial diachylon 6 dr, caranna dissolved in vinegar of squills 4 dr, white hellebore root 2 sc, oil of rosewood 1 sc. Mix. Make a plaster. Spread it on soft

---

32 Probably Dr Edward Lapworth MD; Raach, English Country Physicians, p. 62; there was also a William Lapworth MA (Cantab.) in Warwick, p. 62.

regioni: liberatus ab omnibus symptomatibus. Ad praecautionem habuit fontenellam in brachio sinistro.

Laus Deo soli, omnino evasit a dolore et accidentibus.376

[Case 157] /155/ Calor et asperitas linguae.

Tyler Aldermanus, de calore et asperitate linguae conquestus, cui cito sequenti succurrebam:

℞: syrupi scabiosae magistralis, becabungae, nasturtii aquatci, succi cochleariae praeparati ana unc.s, tussilaginis, liquiritiae, papaveris rheadis ana unc.i. Misce. Capiat saepe cum bacculo liquiritiae.

Curatus.

[Case 158] Matricis suffocatio.

Filia Aldermani Smith, virgo, circa aetatis annum 22, ob mensium diminutione et maerore, incidebat in hystericam passionem cum oculorum convulsione et visus obscuritate. Durante paroxysmo spasmo et colli distortione et cordis palpitatione una cum febre cruciata, ita ut lectum totum huc et illuc quassat. Paroxysmo durante (nam per intervalla recedunt paroxysmi) meo monitu, aquae hystericae coch.iii in os instillare iubebam. Postea cubiculum fumari accensis ungulis cabulinis. Cito a paroxysmo redit.

Ad praecautionem:

376Ruland the Elder, ‘Centuria II’, Curationum [...] centuriae, p. 85: laus Deo soli, omnino evasit a tam saevo malo, atque accidentibus ipsius.
leather, cover with silk, sew together. Apply to the region of the spleen. He was freed from all symptoms. As a precaution he had a fontanelle in the left brachial [vein].

Praise God alone, he escaped entirely from the pain and associated circumstances.

Alderman Tyler: complained of heat and roughness of the tongue. I helped him quickly with the following:

℞: magisterial scabious syrup, brooklime, watercress, prepared scurvy-grass juice each ½oz, coltsfoot, liquorice, corn poppy each 1oz. Mix. Take often with a liquorice stick.
Cured.

[Case 158] Suffocation of the womb.
Alderman Smith’s daughter, a spinster aged about 22 years: fell into a fit of the mother with convulsions of the eyes and darkened vision because of diminished periods and grief. During the attack she was tortured by spasm and twisting of the neck, and palpitations of the heart with fever so that her whole bed shook hither and thither. By my advice, during an attack (because the attacks are lessening at intervals) I prescribe water for the womb, 3 spoonfuls dripped into her mouth. Afterwards fumigate the room with burning horse hooves. She recovered quickly from the attack.

For prevention:

---

℞: castorei pulverizati dr.s, pilulae foetidae dr.i. Fiant pilulae 7, deaurentur. Rite purgata, a symptomatibus liberata. Postremo:
℞: pulveris castorei dr.s, extracti hysterici dr.i. Fiant pilulae 9.N, iii hora cubitus, mane ii.

Sic haec pauc, quibus integram sanitatem ex insperato et ocyssime recepit, nec unquam in posterum haec mala repullularunt.377

[Case 159] Variolarum morbillorum cura –

anglice smale poxe.

Filius unicus theologi Hollihock, qui dictionarium doctissimum composuit, febre ardente continuo, lumbagine, tussi correptus. Praecursores /156/ dixi morbillorum, nec me fefellit opinio, nam die sequenti in facie apparebant, post assumptionem potionis sequentis:
℞: diascordii dr.i, tincturae coralli, lapidis bezoar ana gr.iii, in aqua foeniculi, exoptato eventu nam a dolore dorsi et stomachi liberatus et pullulare incipiebant. Ad oculorum praeservationem:
℞: aquae plantaginis, euphragiae, rosarum ana dr.i, camphorae sc.i, croci gr.ii. Misce, fiat collyrium, et penna leni oculi saepe inungantur.378 Ad gutturis et faucium praeservationem, mandabam

9 Variolarum] veloararum/ morbillorum. 10 anglice smale poxe] Anglice measeles \smalepox/.
21 leni] levi [following Hall’s source].
℞: powdered castor ½dr, foetidae pills 1dr. Make 7 pills, gild them.

She was rightly purged, and freed from her symptoms.

Finally:
℞: castor powder ½dr, extract for the womb 1dr. Make 9 pills: 3 at bedtime, in the morning 2.

*It was with these few that she regained complete health unexpectedly and very speedily, nor did this illness ever reappear.*

[Case 159] Cure of small pox.

The only son of Reverend Holyoak who compiled the most learned dictionary: seized by continual burning fever, lower backache, cough. I said they were the precursors /156/ of measles, nor did my opinion fail me, for the next day they appeared on his face after he took the following potion:

℞: diascordium 1dr, coral tincture, bezoar stone each 3gr, in fennel water, with the desired result, for he was freed from pain in the back and stomach, and [the pocks] began to spring out.

To preserve the eyes:
℞: waters of plantain, eyebright, roses each 1dr, camphor 1sc, saffron 2gr. Mix. make eyedrops and anoint the eye often with a fine feather. To preserve the throat and gullet, I ordered him to gargle

---

9 Case 159| S.O.: Observ. LXIV [Second Century], pp. 154-55. 12 measles] The MS has measles changed to smallpox in the heading, but not in the text. 17 the pocks] A good sign, as the body was expelling the dangerous humours.
ut continuo cum lacte caprino vel vaccino et aqua plantaginis simul mixtis gargarissaret. Est oris et gutturis praestantissimum remedium cum signa exantheamatum se produnt.  

Syrupus granatorum in tali casu arcanus ut pulmones, pectus, gula a morbillis tuta forent, cum simul angustia et tussis adessent, ut continue hoc eclegmate lamberet praecipi:

℞: syrupi granatorum dulcis unc.ii, sacchari penidiarum dr.iii, syrupi ex infusione rosarum, diamoronis ana unc.s, diatragacanthonis frigidis in tabulis dr.iii amidi purissimi sc.ii. Fiat eclegma.

Sed quoniam non erant ad manus, usus est: syrupi magistralis scabiosae dr.s, capillorum veneris, liquiritiae ana unc.i, felici successu.

Ad odoratus sensorium:

℞: aceti rosati optimi parum, cum pane sisiligine et naribus admoveto.

Cibus huic sub noctem hordeatum hoc modo confectum:

℞: hordei mundati p.i, /157/ amygdalarum dulcium unc.ii. Fiat hordeatum pro lib.i. Saccharo violato dulcoretur et eo loco cibi utebatur. Ut morbilli magis per cutem prodierent, decocto liquiritiae, ficuum et hordei communalis ad maiorem expulsionem utebatur.

Calide sese in lecto continendo et imperavi ut ignem satis luculentum.

---

continuously with goat’s or cow’s milk, mixed at the same time with plantain water. This is a supreme remedy for the mouth and throat when the exanthematous signs show themselves.

In a case like this, Pomegranate syrup is a secret, to protect the lungs, chest and throat from measles, despite the simultaneous presence of laboured breathing and cough. I therefore instructed him to lick this eclegma without a break:

℞: sweet syrup of pomegranates 2oz, barley sugar 3dr, syrups of rose infusion, mulberries each ½oz, cold diatracyanth in tablets 3dr, refined flour 2sc. Make an eclegma. But this was not to hand, so he used magisterial scabious syrup, maidenhair fern, liquorice each 1oz, with happy effect.

For the sense of smell:

℞: a little best rose vinegar with wheat bread, applied to the nostrils.

His food before night was barley made in this fashion:

℞: wheat barley 1 handful, /157/ sweet almonds 2oz. Make barley water to 1 pint. Sweeten with violet sugar and use in place of food.

To make more spots appear through the skin, he used a decoction of liquorice, figs and common barley for greater expulsion. He stayed warm in bed and I ordered that he have a sufficiently bright fire in

---

13 For...smell S.O.: to refresh the senses. 16 handful] Mostly I have translated p. as pinch (pugillum) but handful is also possible and seems more likely here. 17 Sweeten...appear] sweetnd with sugar of violets, that the pox might be expelled more. 18 through...expulsion] To the skin was used a decocotion of liquoris, figgs and common barly, which was given hot.
in cubiculo haberet.\textsuperscript{382} Potus ptisana.

His rite, laus Deo curatus.

Generosus Comitis Northamponiensis habuit dolorem extremum modo in unum mox in alium genu ita ut pro dolore egre ambulabat, urinae quoque aliquando retentione lacinatus. Nomen, ni fallor, Peterus Hugges, Wallicus, aetatis 34.

Subito liberatus, paucis his administratis:

\begin{align*}

Ceterum cum morbili magis per cutim prodirent, decocto glycyrizae, ficuum et hordei communis ad maiorem expulsionem utebatur calide sese in lecto continendo, et imperavi ut ignem satis luculentum, cum morbilli erumperent, in cubiculo quo decumbebat, haberet.

18 tartari] \(\overline{Q}\).
his bedroom. To drink: a ptisane.

These, praise God, rightly cured him.

[Case 160]33 Wandering gout. 10 April.

A Gentleman of the Count of Northampton: had severe pain now in one and then the other knee, so that he scarcely walked for pain. He has at some times been attacked by retention of urine. His name if I am not mistaken was Peter Hugges, a Welshman, aged 34.

He was quickly freed, by these few ministrations:

℞: pills - sine quibus, foetidae each 1dr, opoponax 2sc, powder of alhandal trochees 1sc, saltpetre 15gr. Make pills, gild them. Take 1 pill about ten o’clock in the evening, 4 in the morning about seven o’clock, for three days. He was truly purged.

℞: oxycrocium plaster, diachylon with gum each 1oz, oil of bricks 1dr. Make a plaster. Apply to the painful area. He was freed.

27 December: for prevention:

℞: caryocostinum electuary ½oz, cream of tartar 1sc, diasereos syrup 1oz, betony water 4oz. Mix.

℞: pills, sine quibus 1dr, foetidae 1½dr, alhandal trochees 1sc.

Make 10 pills. Give 5 per dose.

He was completely freed, praise God.

33See Appendix B: New Patient Identifications.

Generosa Bove de Kinges Coton, aetatis 46, pruritu in ano et ascharidibus lacinata, cito curata sic:

℞: pilulae hierae cum agarico dr.ii, Ruffi dr.i, foetidae sc.i. Fiant pilulae N.15. /158/ Capiat ii hora somni, mane iii. His finitis, datur rotula una, vel dr.i vel plus ponderans.

℞: seminis Macedonici, seminis santonici ana sc.4, corticum granatorem, cornu cervi usti ana dr.s, dictamni albi, rhabarbari electi, caryophyllorum ana sc.i, cinamomi dr.ii, croci sc.i. Misce, fiat pulvis et cum sufficiente quanto sacchari fiant rotulae ad quantitatem dr.i.383 Utetur suppositorio ex lardo aliquando glister ex lacte et saccharo sordido. Spacio 15 dierum capiat rotulas praedicas.

A pruritu et vermibus penitus liberata.

[Case 162]  1633. Febris scorbutica.

Domina Browne de Ratforde, aetatis 49. Januarii i. Scorbuto confirmato diu laboravit, nunc febre scorbutica continua ardente cruciata. His symptomatibus divexata: cordis palpitatione, flatu stomachi et ventris; etiamsi ructu vel crepitu flatus emittit, parvum tamen sentit levamen. Os habet siccum perpetuo etiamsi modico potu contenta.

383Amatus Lusitanus, Curationum medicinalium centuriae quatuor, p. 313: ℞ seminis Macedonici, seminis sancti ana drachmas tres, corticum granatorem, cornu cervi usti ana drachmas duas, dictamni albi, rhabarbari electi, gariophyllorum ana drachmam unam, cinamomi drachmas octo, croci drachmam unam, misce et fiat pulvis, et cum libris tribus sacchari, ad ignem fiant rotuli [...] datur autem rotulus unus vel alter, drachmam vel plus ponderans.

17 1633] in margin.
Mrs Bovey, a gentlewoman of Kings Coughton aged 46: attacked by anal itching and roundworms. She was quickly cured in this way:

℞: pills - hiera with agaric 2dr, Ruffus's 1dr, foetidae 1sc. Make 15 pills. Take 2 at bedtime, 3 in the morning. When these were finished, give one roll, either 1dr or weighing more:

℞: Macedonian parsley seeds, wormseed each 4sc, pomegranate rind, burnt hartshorn each ½dr, white dittany, choice rhubarb, cloves each 1sc, cinnamon 2dr, saffron 1sc. Mix. Make a powder and make rolls 1dr in amount, with sufficient sugar. She is to use a lard suppository, followed by an enema of milk and unrefined sugar. Take the above rolls for fifteen days.

She was completely freed from the itching and worms.

Lady Browne of Radford, aged 49, 1 January: suffered for a long time from long-established scurvy, now tortured by a continual burning scorbutic fever. These symptoms trouble her: palpitation of the heart, wind in the stomach and bowels. Even when she passes wind or belches, she feels only a little relief. Her mouth is perpetually dry although she is satisfied with a small amount to

drink.

She has a changing pulse, weak, unequal and often wormlike, so that I judge it more to crawl than to beat. She has less heat in a scorbutic than an intense acute fever, and it is less associated with thirst and restlessness. Or, if the heat is worse, anxiety still recurs at intervals and troubles her over her heart, and the pulse is slow and unequal. One distinguishes these fevers carefully from other continual fevers by this: if thick reddish urine with thick, reddish, heavy and uneven sediment are added, and thirst is less than matches the degree of putrefaction (as in her case) this sign is much more convincing. When she rises from bed she feels faint, so that it seems she is going to die on the instant. At that time the pulse feels rather stronger and larger than before, without doubt because there is the greatest need, and because the heart is attempting to expel the corrupt vapours which trouble it.

The smallness of the pulse warned me and I advised the lady not to fear that she would fall out of bed, because the descent is easy and with support. This is a common consequence of this mischief, because it arises from an exhalation of vapours released by internal putrefaction, and breathes out as high as the heart and its container.

\textsuperscript{13}Nota Bene] N.B. in margin and in text.
with wind. The wind could be felt in either side of the belly (she complained of pain in the sides). The source of scurvy in the spleen produces a flatulent melancholy, since the regions of the hypochondria encircle the spleen. The melancholy bubbles up in the meseraic veins around the pancreas and putrefies as if it were fermenting. The winds spread out neither in the front nor back part of the body, indicating that they are affecting the stomach, constricting the precordium, obstructing freedom of respiration. She is attacked by most severe winds from the stomach, limbs and muscles, either continuously or breaking out at intervals.

[The patient], pleading and demanding help from me, was freed through God’s grace and mercy by the following few devices in a few days, and from torments of the belly and fainting and constipation within twenty-four hours. NOTE: She was very thirsty and drank often, but not large draughts. Her tongue was covered in cracks due the acrid nature of the vapours rising from putrefaction.

An enema:

℞: the common decoction for an enema 12oz, unrefined sugar 4oz, fresh butter 2oz. Mix. She had two stools. But before I prescribed the administration of the enema, she swallowed the following electuary:

2 source of scurvy] the spleen.
electuarium:

Hora somni:

℞: aquae cordialis frigidae Saxonie unc.i, syrupi sceletyrbici Foresti coch.i.

3a die sic purgata:

℞: mannae unc.i, rhabarbari expressi dr.i, tartari sc.i, syrupi sceletyrbici Foresti unc.i, aquae cichorii unc.iii. 4 sedes. Pro siti usa decoctione cornu cervi, et his pancratice valet Domina.

Causa huius ex maerore mortis fuit filiae unicae, quae post partum obiit. Fuit filia phoenix sui sexui, pia, religiosa, si quae alia optimae structurae, (quam semper honoris causa nomino) et sic cum Deo relinquo.

[Case 163] /161/ Calculus, lumbago, febris.

5 Nota Bene] in margin. 12 tartari] ¶.
℞: liberans powder 1dr in barberry conserve an hour before the enema, and at bedtime bezoar stone 5gr. Repeat the above electuary in the morning: The enema was repeated, which resulted in 3 stools with great relief. NOTE: All the heat ought to be removed with enemas, because they force the wind to rise. [Take] hartshorn jelly in broth containing antiscorbutic herbs.

At bedtime:
℞: cordial water frigida Saxoniae 1oz, Foreest’s scheletyrbic syrup.

She was purged thus on the third day:
℞: manna 1oz, expressed rhubarb 1dr, tartar 1sc, Foreest’s scheletyrbic syrup 1oz, chicory water 3oz. Four stools. She used the hartshorn decoction when thirsty, and with these she becomes heartily healthy.

The cause was from grief at the death of her only daughter, who died after giving birth. This daughter was a phoenix of her sex, devoutly pious, as well structured as anyone (I name her always to honour her). So I leave her with God.

[Case 163] [161/ Case 163] S.O.

Lady Rainsford: tortured by the stone, fever and thirst, about 62 years old. She was cured with the following, so that now she is healthy. She is modest, pious, kindly and well-deserving of everyone. She was most devoted to reading the Holy Scriptures, and was experienced in the French and Italian languages.

℞: pulveris elleboris dr.i, terebinthinae Cypri dr.ii. Misce. Dentur pilulae 5 ex drachma.
℞: olei scorpionum unc.i, amygdalarum dulcium dr.ii. Misce, illineatur dorsum.
℞: decoctionis emollientis unc.12, electuarii lenitivi, diaphaeniconis ana unc.i, syrupi rosarum solutivi unc.iii. Misce, fiat clyster, ii sedes. Sex horis elapsis, alium exhibui ex decoto praeparato, sacchari unc.4, butyri unc.4. Fiat.

Sed nota, omni 3a hora capi iubebam sequentem:
℞: speciei liberantis dr.i, syrupi papaveris erratici unc.s, possetalae quantum satis. Nox quieta.

Die sequenti glistes ex oleo seminum lini, hora cubitus:
℞: speciei liberantis sc.ii, cornu cervi praeparati sc.i, tincturae coralli sc.s.

Et sic mane, laus Deo trino et uno curata.

[Case 164] Arthritis scorbutica.

Februarii i 1633.
Episcopus Wigorniensis Dr Thorberrey, circa aetatis annum 86, arthritide scorbutica diu cruciatus. Falsa arthritidis imagine medicos etus deciipient ludificantque, qui in veteri medicina expertes

13 tartari] ⁹.
℞: hellebore powder 1dr, Cyprus turpentine 2dr. Mix. Give 5 pills from 1dr.
℞: oils- of scorpions 1oz, of sweet almonds 2dr. Mix. Rub on the back.
℞: emollient decoction 12oz, lenitive electuary, diaphoenicon each 1oz, loosening rose syrup 3oz. Mix. Make an enema: two stools. After six hours had passed, I administered another [enema] from the prepared decoction: sugar 4oz, butter 4oz. Make it.

But NOTE: I prescribed the following to be taken every third hour:
℞: liberans powder 1dr, syrup of corn poppies ½oz, sufficient posset ale. The night was restful.
℞: powdered rhubarb 2dr, fumitory water 8oz. Boil, reduce to 4. To the strained liquid add cream of tartar 1sc, diasereos syrup 2oz. Make a draught: five stools.

An enema of linseed oil the next day, at bedtime:
℞: liberans powder 2sc, prepared hartshorn 1sc, coral tincture ½sc.

And so in the morning she was cured, praise God the three and one.

[Case 164] Scorbatic arthritis.
1 February 1633.
The Bishop of Worcester, Dr Thornborough, about 86 years old: tortured for a long time by scorbatic arthritis. _The deceptive appearance of the arthritis misled and toyed with his physicians,

---

18 praise...one] S.O. omits. 21 Case 164] S.O.: Observ. LXIX [Second Century], pp. 159-60.
et docti.  

Inquirenti mihi de omnibus diligentius de arthritide an fixa vel vaga, deinde de urina, postea maculis, confessus reverendus pater ante paucos dies subnigras maculas sibi in cruribus apperuisse, quae in citrinum colorem /162/ destiissent, unde de scorbuto confirmatus.  

Urinam eius modo rubram, modo crassam inveni, nam frequens eius mutatio est signum scorbuti, quae quantum memoria mea repetere mecum possum, fuit quotidie mutatio aut crassae, sublividae et rubrae vel albae, subsidentes et turbidae apparuerunt, cum et sine sedimento.

Maculae: Quod crassum et gravius est ad crura decumbit, ibique maculas varias excitat, quae in principio rubicundae, illis, quae a pulicium morsibus relinquuntur, non absimiles, hinc sublividae et purpurae erumpunt, tandemque inclinant ad colorem nigrum [...] sunt maiores [...] et minores morsibus pulicium similares, frequentius [...] in cruribus, cum natura vitiosos humores soleat ad partes ignobiliores et remotas depellere.

Vigilia: Nox inquieta. Ob salsos, et acres humores vapores ad
who were experienced and learned in traditional medicine.

I enquired more thoroughly concerning the arthritis, whether it was fixed or wandering, then about his urine and finally the blotches. The Reverend Father revealed that blackish blotches had appeared on his legs a few days earlier, which changed to a yellow colour, which confirmed scurvy. I found his urine now red, now turbid, frequent change being a sign of scurvy. As far as I can recall from memory, it changed daily: either thick, bluish, red or white, appearing to be clearing or turbid, with or without sediment.

Blotches: What is thick and heavier sinks to the legs, where it causes various blotches which are at first ruddy, not dissimilar to those left by fleabites. They break out bluish and purple, then turn black. Both the larger ones, and the smaller ones similar to fleabites, occur more frequently on the legs, since nature is accustomed to banish vicious humours to the less noble and more distant parts.

Wakefulness; a restless night: They are harassed by wakefulness because of salty and bitter windy humours rising to the head, and if they sleep, they are terrified.

caput ascendentes vigiliis infestantur, et si dormiunt, terrentur.\textsuperscript{399}

Sic huic episcopo accedebat, nam filius eius eques aestate praeterita dispensatorem eius gladio transfodit, quoniam pecuniam quam mutuam accepit, iterum solvere rogabat. Ira accensa, gladio capite vulnerato, et sanguine vestibus tinctis, ira in furorem conversa, stricto gladio pectus transfodit filius, ita ut ne verbum unum vel alterum emisit. Haec audiente episcopo et servum in sanguine volventem (quem unice amabat) perspiciente, statim animi deliquium passus. Cum ad se reddiit ex imaginatione /163/ et metu mortis filii (quem in deliriis habuit) ob homicidium, melancholia gravi corripit; ob maerorem et metum supplicii (nocte somniabat filium suspensum esse) a terrore ob visum suspensi filii expergefactus. Postea melancholia gravi afflicta, ita ut edere nec dormire potuit. Hinc illae lachrymae et morbi causa.

Nunc de dolore genu et tali conquestus. Dixi se non laborare podagra simplici, sed arthritide scorbutica vaga, \textit{nam arthritis scorbutum saepe comitatur} quae dictus scorbutica vaga, \textit{quae tamen ipsa non in uno loco ad morbi solutionem subsistit, sed vaga [...] modo in genu, mox in pede cum [...] et sine tumore corripitur}, sed in genu et circa talum magnus tumor fuit, in pede tumor sicut hydropicus, nam digitis non cedit sicut in hydropoe vera, neque \textit{arthritis vera fuit ab antiquis descripta}, nam ista locum non mutet, haec modo in genu mox

\textsuperscript{399}Sennert, \textit{De scorbuto tractatus}, p. 111.
What affected the bishop was this. His son, a knight, had stabbed with his sword one of the Bishop’s servants the previous summer, for borrowing money and then asking for the debt to be cancelled. His son’s rage was inflamed when his head was wounded with a sword, his clothes stained with blood. Then, anger turning to fury, his son drew his sword and stabbed [the servant] through the chest, so that he never said another word. The Bishop fainted on hearing this, and seeing the servant (whom he especially loved) rolling in blood. When he recovered, he was seized in his imagination with severe melancholy /163/ and fear of the execution of his son (as he thought in his delirium) for murder. Because of grief and fear of the punishment (he dreamed at night that his son had been hanged) he was woken in terror by the sight of his execution. Following this he was troubled by severe melancholy so that he could neither eat nor sleep. This was the cause of these tears and the illness.

He now complained of pains in his knees and elsewhere. I told him he did not suffer from a simple gout but a wandering scorbatic arthritis, for it often accompanies the arthritis of scurvy which is called wandering scurvy, because it does not stay in one place until the weakening of the illness but, wandering itseizes now the knee, then the foot with or without swelling. There was a lot of such swelling in the knee and around the ankle, in the foot similar swelling to dropsy, though it did not yield to the fingers as in a true

---

2 What... 18 I S.O.: If he did sleep it was with terror, which happened from the sudden slaughter of one of his family, which did much terrify and perplex his spirits, and afflicted him grievously with melancholy.
in pede, huc et illuc vaga ista ad solutionem usque membrum, quod primo apprehendit, obsideat. [...] haec ortum habet ab humoribus serosis, tenuibus et acribus ad motum promptis et ad locum mutandum aptis.⁴⁰⁰

Praedixi me levare, sed nunquam curare quoniam senio confectus, et ipse dixit, visitandi sunt senes curandi iuvenes. Sed quoniam noctes insomnes erant et dies molestae, iubet me tentare se aliquid levaminis ei darem, nam sic vivere mori est.

Nomine Dei, sequentes praescrispi, purgatione omissa ob vires imbecilles et quoniam ante purgatus:

/164/ gelatinum ex rasuris cornu cervi, herbis antiscorbuticis, coxendice vituli et perdicis cum passulis et dactillis compositum. Colatae addebam tincturam croci parum et alkermes cum saccharo cando dulcorandum, palato acceptum, naribus odoriferum, stomacho aptum. Succum cochleariae praeparatum cum vino ter in die accipere vellem, et tumouribus dolentibus lumbricos vivos impone iubebam, cum saepe in eodem dolore, felici successu applicavi ceteris, eum exilire, circumgirari, incurvarī, tabescere et emori.⁴⁰¹ Viderim sequenti experimento Eugaleni: tumouribus livides accomodatissimo quod in tribus 4 diebus omnem hunc tumorem et duritiem discutiāt ac tollit et pulvere absinthii et ovis ut

⁴⁰⁰Sennert, De scorbuto tractatus, p. 102: Eodem modo et arthritis scorbutum saepe comitatur; quae tamen et ipsa non in uno loco ad morbi solutionem subsistit, sed vaga est [...] et sine tumore corripiatur; cum arthritis ab antiquis descripta locum non mutet, sed ad solutionem usque membrum, quod primo apprehendit, obsideat [...] ortum autem habet ab humoribus serosis, tenuibus, et acris ad motum promptis et ad locum mutandum aptis. | ⁴⁰¹Horst, Observationum [...] libri quatuor, p. 350: si imponatur loco maximo dolenti lumbricus vivus, eum exilire, circumgyrari, incurvarī, tabescere, et emori.
dropsy, nor was it a true arthritis as described by early authorities, for that does not change its place, now in the knees and then in the feet, hither and thither. *It takes possession of the limb which was first seized in order to weaken it. It has its roots in thin, watery, bitter humours ready for movement and apt for changing place.*

I warned that I could alleviate but never cure it, because he was weakened by age. He replied, ‘the old should be visited, the young cured’. But because his nights were sleepless and his days troubled, he instructed me to try to give some alleviation, for ‘to live so is to die’.

I prescribed the following in the name of God, omitting purgation because of his weak strength and since he had been purged before:

/*164*/ A jelly of hartshorn shavings, antiscorbutic herbs, veal bones and partridge, made with raisins and dates. To the strained liquid I added a little tincture of saffron and alkermes with sugar candy for sweetening, acceptable to the palate, fragrant to the nose, and suitable for the stomach. I wished him to take prepared scurvy-grass juice three times a day. *I prescribed live worms to be placed on the painful swellings*, seeing that I have applied them successfully in other cases, *for they leap up, curl around, bend down, dwindle away, and die*. I have observed this as in Eugalenus’s experience: *it is most appropriate for livid swellings*
antea.⁴⁰²

Balneum pro pedibus ante usum pultis:
℞: becabungae M.10, cervisiae quantum satis. Bulliant et fiat balneum in quo pedes mane et vesperi balniet. E balneo nox longe alis quietior, et ea nocte somno complexus arctior quam antea.⁴⁰³

His laus Deo a dolore et tumore pedum penitus liberatus.

Mensa altera visitatum inveni eum ambulantem strenue, et mihi ingentes reddebat gratias. Laus Deo Optimo Maximo.

Generosus Simon Underhill, circa aetatis annum 40, de praedictis symptomatibus conquestus, quae re vera sunt signa scorbuti.

Causas quaere foliis 238-240, 242 Eugaleni,⁴⁰⁴ et foliis 115, 612, 721 Danielis Senerti, Tractatus de scorbuto.⁴⁰⁵

Multum confert habere alvum flavidam.
℞: ialapae sc.i, tartari cremoris sc.s, terebinthinae Cypri quantum

---

because it dissipates and removes all swelling and hardness in three or four days. Wormwood powder and egg as before.

A bath for the feet before he used the poultice:

℞: brooklime 10 handfuls, sufficient beer. Boil and make a bath, bathe the feet in it morning and evening. After the bath the night was more restful than for a long time. He was gripped by sleep more closely than before. Then I reduced our antiscorbutic water, seeing he took [another] antiscorbutic water. He used scurvy grass juice as before, and jelly. He also took antiscorbutic beer.

These, praise God, freed him completely from the pain and swelling of his feet. The next month I contrived to visit him. He was walking vigorously and thanked me greatly. Praise to almighty God most high.

[Case 165] 165/ Very severe vomiting, wind in the stomach, difficulty of breathing, constipation of the belly, scurvy. 1633. Mr Simon Underhill, a gentleman about 40 years old: complained of the above symptoms, which are true signs of scurvy. For the causes, see Eugalenus, pages 238-240, 242, and Daniel Sennert, Tractatus de scorbuto, pages 115, 612, 721.

This causes very loose bowel movements:

℞: jalap 1sc, cream of tartar ½sc, sufficient Cyprus turpentine. Make 3 pills. He was wholly purged.
satis. Fiant pilulae N.iii. Rite purgatus.

Pro anhelitu difficili, capiat:

His longe melius, ita ut me nesciente curriculo ad domum evectus cum ad me venisset. Dixit se hic mori aut curari, nam longe malit quam sic vivere, nam sic vivere continuo mori dixit.

Nocte post primum somnum, 7 die Martii, flatu a stomachi caput petente pro dolore dixit se insumere ad dolorem compescendum:

Die 9:

℞: succi cochleariae praeparati unc.8, syrūpi becabungae, nasturtii aquatici ana unc.ii. Usus vino chalybeato, electuario pleres archonticonis post pastum, et continuo birea antiscorbutica.

His spacio 14 dierum sanus evasit, laus Deo.
For the difficulty in breathing, take:
℞: pleres archonticon powder 2dr, scurvy grass conserve 2oz, alkermes confection 1sc. Mix. Dose: the amount of a nutmeg, an hour before meals. Repeat often. He also used diacrocuma, up to 2dr before dinner.

He improved a great deal, so it was unexpected when he turned up at my home, brought to me in a carriage. He said he would rather die here or be cured, for he much preferred that to living like this. ‘For’, he said, ‘to continue to live like this is to die’.

During the night of 7 March, wind from the stomach reached his head, like a pain. He asked for something to control it:
℞: red Pannonian powder 2sc with syrup of violets, from a spoon. The rest of the night was restful. In the morning: an enema of a decoction of brooklime, watercress, scurvy-grass and nettle. I took 12oz of the decoction, Holland powder 1dr, diaphoenicon 1oz, diaturbith powder with rhubarb 1½dr. Mix. Make an enema. He discharged many cannon blasts and farts. Before the enema I wished him to swallow scurvy grass conserve 3dr, red Pannonian powder 1sc.

On the 9th day:
℞: prepared scurvy-grass juice 8oz, syrups of brooklime and watercress each 2oz. He used steeled wine, pleres archonticon electuary after meals, and antiscorbutic beer all the time.

Within fourteen days he was healthy again. Praise God.
[Case 166] /166/ Hysterica passio, brachiorum
convulsio et buccae sinistrae, cum animae
deliquio. Februarii 22.

Generosa Swift, virgo intacta, casta, proba, eximiae structurae,
consangunine Baroneti Broke de Castro Warwici, circa aetatis
annum 20: suffocatione matricis, tortura oris, convulsionibus
manuum et brachiorum misere lancinata. Rite a medico experto
purgata, et multa frustra adhibenda.

Tandem huic deploratae generosae nomine Dei sic
succurrebam:

℞: decoctionis bryoniae cum herbis uterinis lib.s, speciei hierae
picrae dr.ii, pulveris Holland dr.i. Fiat glister, ii sedes cum fructu.
Dabam aquae hystericae unc.i, sed evomebat, et statim pilulas
sequentes:

℞: extracti hysterici sc.i, faeculae bryoniae sc.s. Fiant pilulae N.iii,
deaurentur. Hora dimidia elapsa iterum evomebat pituitam et
melancholiam acidam, et de calore stomachi conquesta, sicut fuit
excoriatio. Iussi bibere haustum aqua limpide frigide ad lib.s.
Statim iterum evomebat, iterum haustus aquae reiteretmus, tam cito
ut in stomacho calido evomebat. Tunc iterum repetere iubebam.

Retenuit et longe melius habuit.

Pro convulsione:

℞: unguenti Martiati unc.s, olei sassaphras et succini ana gut.5.
Misce. Inungatur nuca. Umbilico emplastrum ex caranna, in cuius
medio granae quinque siveti et moschi, super bombacem et
[Case 166] /166/ Fit of the womb, convulsion of the arms and left cheek, with fainting. 22 February.

Mrs Swift, a gentlewoman, spinster, modest, well-conducted, of excellent structure, a relative of Baron Brooke of Warwick Castle: wretchedly attacked by suffocation of the womb, spasm of the mouth, convulsions in the hands and arms. She was properly purged by an experienced physician and consulted many in vain.

Then I hastened to the aid of this desperately ill gentlewoman in the name of God, thus:

℞: bryony decoction with feverfew ½lb, hiera picra powder 2dr, Holland powder 1dr. Make an enema: two stools with relief. I gave water for the womb 1oz but she vomited, then at once the following pills:

℞: extract for the womb 1sc, bryony dregs ½sc. Make 3 pills, gild them. After half an hour she vomited phlegm and black acid bile again, and complained of heat in the stomach, as if it were being scalded. I directed her to drink clear cold water, up to ½ pint. She vomited again at once. Again I repeated the draught of water, so that as it reached the heat of her stomach, she vomited. Then I directed it repeated once more. She retained it, and was much better.

For the convulsion:

℞: Martiatum ointment ½oz, oils of sassaphras and amber each 5 drops. Mix. Rub onto the neck. To the umbilicus: a plaster of

caranna with five grains of civet and musk in the middle on cotton-wool, and hartshorn shavings with a little bryony dregs and arum. Continue for several days. She used Ruland’s sneezing powder.

She had slight fainting attacks, up to twice an hour, previously four to six.

At bedtime:

℞: best musk 5gr, cinnamon, cloves, nutmeg each 1sc. Make gilded pills with alkermes confection.

These completely cured her, praise God.

[Case 167] Burning fever, scorbutic dropsy.

Mrs Fiennes, a gentlewoman (whom I name always with respect), born of noble stock: seized by a burning fever with thirst and loss of strength three days after giving birth.

The midwife in attendance wished to give her posset ale with lemon juice and wood-sorrel, and a morsel of chicken with wood-sorrel juice, so she ate it. They cooled her stomach too much. She fell into a dropsical swelling with swelling of the right leg and thigh, so that she was unable to move for pain. The midwife applied a plaster of red lead and instructed it to be tightly fastened round. The pain and swelling increased and finally she asked me to attend.

When I saw the hard swelling, I diagnosed scorbutic dropsy. For the differences between a dropsical and a scorbutic swelling, see Daniel Sennert, *Tractatus de scorbuto*, page 623. She was weakened by a

slight hemiplegia and almost choked with phlegm. *I help the
desperately ill gentlewoman in great measure with the skill of my
hands and by calling on divine aid, in this way:*

First, so that she was not choked by abundance of phlegm, I
prescribed a linctus of this sort:
℞: syrups of hyssop, brooklime, watercress, magisterial scabious
each 1oz. She licked it often with a liquorice stick, with the desired
result.

An enema:
℞: mallow, brooklime, watercress, scurvy grass each 1 handful,
/168/ fennel, parsley roots each 2oz, tops of elder ½ handful. Boil
in sufficient water to 12oz. To the strained liquid add unrefined
sugar 4oz. She was very well purged of wind and phlegm, and thus
the next day was rightly purged with the desired result.

At bedtime:
℞: red Pannonian powder ½dr, prepared hartshorn ½sc, alkermes
confection 1sc. Take it with lemon juice. That night she was
soaked in sweat. The powder was repeated in the morning during a
faint for, when she wished to move from a bed or chair, she fell from
diminished strength into a faint. This too is sign of scurvy that
should not be disregarded.

To restore strength I gave this electuary:
℞: scurvy grass conserve 2oz, pleres archonticon powder ½oz. Mix.
Give the amount of a nutmeg three hours before she rises.

409 Horst, Observationum [...] libri quatuor, p. 141.
Because I was hindered by much business, I could not stay with her longer. I asked her to send a servant to me the next day. He reported that she had almost been choked by phlegm during the night. I sent back the prepared syrup for phlegm again, and our antiscorbutic water as for the Bishop. Take 6 spoonfuls in the morning and at bedtime. These restored her very well, praise God, beyond the expectation of her friends who thought death was at the doors.

An enema every other day:

℞: elder buds 1 handful, scurvy-grass, watercress, brooklime each ½ handful, entire fresh nettles 1 handful, parsley, fennel roots each 1oz. Boil in sufficient water. /169/ ℞: of the strained liquid 12oz, diacatholicon 1oz, diaturbith powder with rhubarb 2dr. Make an enema: three stools. She also had a restorative of snails and earthworms, hartshorn shavings and saffron with antiscorbutic herbs as for the Bishop of Worcester, and chicken and partridge with cinnamon.

She had an antiscorbutic beer of this sort:

℞: elder buds, leaves of betony, agrimony, scabious, wormwood each 1 handful, watercress, brooklime each 2 handfuls, blessed thistle, fumitory, wall germander each ½ handful, watercress, brooklime each 2 handfulls, scurvy grass 4 handfulls, juniper berries ½lb. Infuse sliced and bruised in uncooked beer mash, 5 gallons. Boil, reduce to four gallons. Combine these powders in a little knot and boil with the above. Afterwards boil again, and hang on a string in

Stent 14 diebus, deinde ieiuno stomacho capiat haustum, et ante prandium et cenam et cum cubitum descedit.

Pro contractione tibiae, a principio unguento sequenti:
℞: olei lumbricorum, chamaemellini, de castoreo ana unc.i, pinguae anserinae, gallinae ana unc.s, unguenti dialtheae unc.ii, succi e foliis cochleariae, becabungae, nasturtii aquatici ana unc.i, cerae quantum satis. Fiat unguentum. Hoc unguento exoptato eventu usa, nam trium dierum spacio per se sine bacculo ambulare potuit.

Omni /170/ die capiat unc.4 huius:

Bis in septimana capiat enema:
℞: urinae pueri impuberis unc.12. His incoque fermenti unc.i.s, seminum foeniculi, anisi, anethi ana unc.i.s, mellis despumati unc.i. Fiat clyster.

Inde rediviva pristinae sanitati restuitur, Dei solo nutu, praeter amicorum spem.

[Case 168] Scorbuta hydropica, respiratio difficilis, tumor pedum, icteritia citrina, ventris et lateris tumor. 1633 Martii xii.

the barrel, coriander, anise seeds each ½ oz, liquorice 1 oz,
sarsaparilla 2 oz, sassaphras 1 oz, skin of winter cherries ½ oz.
Stand for fourteen days, then take a draught on an empty stomach,
and before lunch and dinner and when retiring to bed.

The following ointment from the beginning, for contraction of
the leg:
℞: oil of worms, chamomile, of castor each 1 oz, goose, chicken fat
each ½ oz, marsh mallow ointment 2 oz, juice and leaves of scurvy-
grass, brooklime, watercress each 1 oz, sufficient wax. Make an
ointment. She used this ointment with the desired result, for within
the space of three days she could walk without a stick.

/170/ Take 4 oz of this, every day:
℞: scurvy-grass, watercress equal parts, brooklime half a part.
Pound in a stone mortar and boil in milk, not pouring in a large
amount of liquid. The drink as before.

Take an enema twice weekly:
℞: urine of a prepubescent boy 12 oz. In this boil leavening 1½ oz,
fennel, anise, dill seeds each 1½ oz, purified honey 1 oz. Make an
enema.

Then she was revived, restored to her previous health by the
will of God alone, beyond the hope of friends.

[Case 168] Scorbatic dropsy, difficulty of breathing,
swelling of the feet, yellow jaundice, swelling of the
belly and sides. 12 March 1633.
Generosus Fortescue, Catholicus de Cookehill, aetatis 38, crebris potationibus deditus, optimi habitus, natura sanguineus, satis obesus et utcunque densus, incidebat ex crapula in hydropem scorbuticam cum respiratione difficiili, tumore ventris, scroti, pedum duro, flatu hypochondriaco, icteritia citrina per totum corpus diffusa.

De his conquestus, ad quem veniens, sequentia ordinabam praesidia:
℞: pulveris senae laxativae, speciei diaturbith cum rhabarbaro ana sc.ii, syrupi cichorii cum rhabarbaro unc.i, possetalae quantum satis. Fiat haustus, 8 sedes.
13:

20 tartari | Q.
Mr Fortescue, a gentleman, Catholic, of Cookhill aged 38; given to frequent heavy drinking, of very good build, sanguine by nature, fairly fat though compact. He fell into scorbutic dropsy from drunkenness, with difficulty in breathing, hard swelling of the belly, scrotum, feet, wind in the hypochondrium. yellow jaundice had spread over his whole body.

He complained of these, and when I came I prescribed the following defence:

℞: laxative senna powder, diaturbith powder with rhubarb each 2sc, chicory syrup with rhubarb 1oz, sufficient posset ale. Make a draught: eight stools.

13th:
℞: pills.- stomach, Ruffus's, sine quibus each 1sc. /171/ Make 5 pills: six stools.

14th: Venesection to 7oz.

15th:
℞: polypody of the oak, liquorice each 1oz, chicory root ½oz, shoots of brooklime, scurvy grass, watercress, fumitory, lesser centaury each ½ handful, senna leaves 3oz, sliced agaric 6dr, rhubarb 2dr, cream of tartar 1dr, chamomile flowers, elderflower buds each 2 pinches, fennel, carrot seeds each 1½dr, cinnamon, cloves, peel of winter cherries each 1dr, zedoary ½dr, saffron ½sc, stoned raisins 3oz. Make an infusion in 8 pints spring water overnight. In the morning boil, reduce by a third. Take 8 spoonfuls daily, resulting in
quotidie.

18:

Post pastum:

℞: diambrae dr.ii, sacchari rosati unc.ii. Coch.s dosis.

Restaurativum ut pro Generosa Finnes, folio 169 et folio 164. Omni 3a die purgandus.

Pro siti lenienda, loco cervisiae frequenter utatur decoctione infusione sassaphras, quae fiat hoc modo:

℞: rasurae ligni sassaphras unc.i, radicis liquiritiae rasae unc.ii, seminum foeniculi dr.ii, passularum minorum unc.i.s. Indantur in lagenam stanneam et affundantur aquae ferventissimae lib.vi.

Optime claudatur et in loco frigido sua sponte frigefiat.415

Diacrocuma usus ad dr.ii.

Omni mane per 5 matutinis et post pastum:

℞: speciei pleres archonticonis dr.ii, sacchari unc.i. Dosis coch.s.

Die 24:

Purgatus pilulis praedictis ut 18 die, sedes 8. Decoctum ligni sancti hoc modo praeparatum:

℞: ligni sancti in ramenta pulverati lib.i, aquae lib.9. Bulliant ad dimidias et sub finem decoctionis adiiciebam soldanellae siccae M.i, interioris cinamomi unc.ii, passularum cum acinis unc.ii. Fiat decoctio. /172/ Illam calentem in alterum vas vitreum infundi

---

415Horst, Observationum [...] libri quatuor, pp. 141-142: pro siti lenienda loco cervisiae frequenter utatur quae fiat hoc modo: ℞: rasur. ligni sarsaf ras unc.i. rad. liquirit. rasae unc.ii, sem. foenic. dr.ii, passul. minorum unc.i.s. Indantur in lagenam stanneam et affundantur aquae ferventissimae mensurae duae, optime claudatur, et in loco frigido sua sponte frigefiat.
five stools each day.

18th:
℞: pills - aggregative, for the stomach, Ruffus’s each ½dr, prepared gamboge 14gr. Make 10 pills for 2 doses. Five stools from 1 dose.

After meals:
℞: diambra 2dr, rose sugar 2oz. Dose: ½ spoonful. The restorative as for Mrs Fiennes, page /169/ and page /164/. He was purged every third day.

To assuage thirst, instead of beer he frequently used a decoction of sassafras infusion, made in this way:
℞: shavings of sassafras wood 1oz, of liquorice root 2oz, fennel seeds 2dr, small raisins 1½oz. Place in a pewter flask and pour on boiling water 6 pints. Close very well and allow to cool in a cold place. He used diacrocuma up to 2dr.

Every morning on five mornings, and after meals:
℞: pleres archonticon powder 2dr, sugar 1oz. Dose: ½ spoonful.

24th:
He was purged with the above pills as on the 18th: eight stools. A decoction of guaiacum, prepared in this way:
℞: guaiacum wood broken into chips 1lb, water 9 pints. Boil, reduce to a half. Near the end of cooking, I added dried bindweed 1 handful, inner cinnamon 2oz, raisins with seeds 2oz. Make a decoction. /172/ I ordered this to be poured, hot, into another glass
iubebam, in quo vini generosi lib.iii inieceram. Ex hoc syrupo calido unc.9 mane sumere, vesperti unc.vi consulebam, eumque probe stragulis opertum elicere sudorem. Victus erat exsiccans.

Omni 3\textsuperscript{a} die glistere ex urina et fermento ut pro Generosa Fienes, folio /170/, et semel in septimana bolo sequenti purgatus: R: ialapae sc.i, tartari cremoris dr.i, electuarii de tamarindis unc.s. Fiat bolus: vii sedes. His tumor penitus sublatus.

Deinde usus per mensam birea antiscorbutica praedicta et pulverem post pastum:
R: pulveris Pannonici rubeae, speciei diambrae, speciei diamoschu dulcis ana dr.i, olei anisi destillati gut.iii, sacchari albi unc.4. Misce, fiat pulvis. Dosis quantum super vi denarii tenere potuit.

Hoc modo sex septimanarum numero perfecte restitutus. Deo [...] sit laus, honor et gloria in aevum.
jar, into which I poured 3 pints of good wine. I advised drinking this syrup hot, 9oz in the morning, in the evening 6oz, and to cover himself properly with the bedcovers, to elicit sweat. His diet was drying.

Every third day, an enema of urine and leavening as for Mrs Fiennes, page /170/. He was purged weekly with the following bolus:

℞: jalap 1sc, cream of tartar 1dr, tamarind electuary ½oz. Make a bolus. Seven stools. These removed the swelling completely.

I do not know by what fate, but on 3 April he fell into a fever. He had two attacks of rigors and shivering for six hours, then was hot for three. He was purged again with the above bolus: five stools, large and watery. This freed him from the fever.

Next he used the above antiscorbutic beer with meals, and this powder after meals:

℞: red Pannonian powder, powders, diambra, sweet diamoschu each 1 dr, distilled anise oil 3 drops, white sugar 4oz. Mix. Make a powder. Dose: the amount that can be held on six pennies.\(^{34}\)

In this way he was completely restored in six weeks. Praise,

honour and glory be to God, for ever.

\(^{34}\)Approximately 7 grams, or 11 grains.

\(^5\) and leavening\] S.O. omits.  \(^{19}\) Praise...ever\] S.O. omits.
[Case 169] Scorbutus confirmatus cum sudore.

Hunc sanum reddidi paucis sequentibus. Maii 1:

℞: diatartarii unc.ii. Quotidie cochlearium parvum accepit, ex unde 4 sedes. Purgato suaviter corpore singulis diebus. ---

Long-standing scurvy with sweating.

Mr Kimberley, a gentleman about 26 years old: suffered from tiredness of the whole body for a long time. He has better appetite than digestion and is disfigured by jaundice. He is seized by lower back pain, weakness of the legs, stabbing pain in the head especially near the ear. Urine: frequent small changes, sometimes thick, more recently clear like spring water. He was weighed down by slight shaking in the limbs, attacked by pains in the legs, headache and swelling of the gums, afflicted by pain and swelling of the fingers, attacked by wandering hypochondriac pain and wind, disfigured by morphew, with many other signs of scurvy. He took much from physicians, to no avail, and used natural baths without profit. He was purged often and used a sweating decoction, but to no purpose.

I returned him to health with these few following. 1 May:

℞: diatartar 2oz. He received a small spoonful every day, resulting in four stools. He was pleasantly purged in the body on each day. He definitely took 4oz of the expressed juice of the following plants at three or four o’clock in the morning when sweating was expected, and at four o’clock in the afternoon. Mix with sufficient sugar and cinnamon 1dr.

℞: scurvy grass, watercress each ½lb, brooklime 4oz. Bruise and

422Ruland the Elder, 'Centuria III', Curationum [...] centuriae, pp. 179-80: per divinam virtutem, ipsamque aquam a moestissimo et intensissimo dolore gonagrae liberatus mox fuit, ut iam annis multis nunquam elapso amplius reciderit in haec articulorum mala tristia et acerba.
and afternoon. He was purged every third day.

℞: pills - aggregative 1dr, stomachic $\frac{1}{2}$dr, prepared gamboge gum 14gr. Make 10 pills: from 5, five stools.

Day by day he was restored to health. He drank the prepared beer, and every day before the drink:

℞: steeled electuary 4oz, scurvy grass conserve 2oz. Mix. Dose: the amount of a nutmeg, and he is to take exercise for an hour. Then take $\frac{1}{175}$ a draught of the beer. The beer was repeated twice, and the steeled electuary used for fifteen days. After meals: scurvy grass conserve 1oz, bugloss $\frac{1}{2}$oz, pleres archonticon powder 2dr. Mix: the amount of a nutmeg after meals.

Every fourth to sixth day he was purged with the following morsels, called purgative morsels of mechoachan:

℞: conserve of violets 1oz, powder for cold diatragacanth 1$\frac{1}{2}$dr, turbith gum, best white mechoachan each $\frac{1}{2}$dr, diagrydium with prepared fennel oil 2dr (I use diagrydium prepared with sulphur fumes, or Horst’s with oil of fennel) sugar dissolved in fennel water 14oz, cinnamon oil 6 drops, anise oil 4 drops. Make sweetmeats in morsels. From 7dr, eight stools. He took the beer for three months.

By these, through divine power and the medicines, he has been freed from the most ill-omened and intense pain in his parts so that one year later, he has never again relapsed into this sad and bitter mischief of the joints. He gave great thanks to God and to me, and

he calls me father because I saved him from the jaws of death. He recovered completely.

[Case 170] Roundworms.

Mrs Edith Stoughton, a gentlewoman: wretchedly attacked by melancholy and worms day and night. I cured her as for Mrs Bovey above.

She was quickly freed and perfectly cured.

[Case 171] Scurvy, paralysis, fit of the mother, fainting.

Mrs Wilson, a gentlewoman aged 34, respected, as devoutly pious as anyone: went to Bristol for the restoration of her health, because she felt tortured by the stone. She drank the water of St Vincent's Fountain with excessive greed, up to thirteen pints in one day, in order to expel the stone. As a result her body became excessively cooled and she fell into a paralysis. She took herself at once to Bath, was purged by Dr Lapworth, and used the baths. She recovered.

She returned home in wet and stormy weather, and was distressed by a fit of the mother at night, with fainting and a slight paralysis on the left side. She asks my advice. Being summoned, I invoked the holy will and employed aids of these kinds.

℞: clear aloes 2dr. trochiscated agaric, choice powdered rhubarb

37Dr Edward Lapworth MD of Oxford; Raach. English Country Physicians, p. 62.

ana sc.i, faeculorum aronis, bryoniae ana sc.s, castorei dr.i.s,
tartari cremoris dr.s, spiritus succini gr.4. Cum syrupo de fumaria
composita quantum satis, fiat pilulae N.vi pro quavis drachma.
Capiat tres harum pilularum hora somni: die sequenti 4 sedes.

Post pastum capiat rotulam:

℞: specierum diambrae dr.s, diamoschi dulcis sc.i, olei anisi chymici gut.iii, sacchari in aqua boraginis dissoluti quantum satis. Fiant rotulae. Purgata diatartaro bis in septimana.

Pervigiliam movi sic:

\textit{Atque his perpaucis adiumentis, Deo me indignum servulum adiuvante mox ad sanitatem rediit.}\textsuperscript{427} Laus trino et uno Deo. 1634.

[Case 173] Ventriculi doloris, scotomiae, surditatis, palpitationis cordis cura.

Generosa Cookes, annorum plus minus 48, constitutionis corporis gracilioris, conqueritur de dolore ventriculi, scotomia, tinnitu, surditate, gravedine, cordis palpitatione, quae symptomata omnia cum liquido constet soboles esse flatuum hypochondriacorum

\textsuperscript{426}Ruland the Elder, ‘Centuria III’, \textit{Curationum […] centuriae}, p. 181 [also p. /121/]. | \textsuperscript{427}Ruland the Elder, ‘Centuria VIII’, \textit{Curationum […] centuriae}, p. 566: Atque his perpaucis adiumentis, Deo suum fidelem ministrum adiuvante mox ad sanitatem rediit optime. [The phrase ‘me indignum servulum’ occurs in several places in Ruland].
mix at the fire for an ointment, with which anoint the side. Cover it with a cloth smeared with warm butter, twice a day.

For wind she used:
℞: rosemary, bugloss conserves each 1½ oz, clove-gillyflower 1 oz, preserved elecampane root, preserved ginger each ½ oz, aromatic rose powder 1½ dr, alkermes confection ½ oz. /179/ Make an electuary with syrup - regis, or of apples. Dose: the amount of a nutmeg after meals.

After meals take this roll:
℞: diambra powder ½ dr, sweet diamoschu 1 sc, chymical oil of anise 3 drops, sufficient sugar dissolved in borage water. Make rolls. She was purged with diatartar twice a week.

I removed the wakefulness in this way:
℞: alabaster or populeon ointment ½ oz, Paracelsus’s laudanum dissolved in rose water 10 gr. Rub on the temples.

With these very few aids and with the help of God, I his unworthy servant soon restored her to health. Praise God, three and one. 1634.

[Case 173] Cure of stomach ache, dimness of vision, deafness, palpitations of the heart.

Mrs Cookes, a gentlewoman, 48 years more or less, of a slender build: complains of stomach ache, dimness of vision, tinnitus, deafness, cold in the head, palpitations of the heart. All of these symptoms seem to be due chiefly to hypochondriac winds springing

16 With... 18 one] S.O.: and so she was healed. 20 Case 173] S.O.: Observ. LXXVIII [Second Century], pp. 172-173.
ortum ducentium ab obstructione et dyscrasia potissimum lienis et potissimam collimandam, ut pars illa protopathiam affecta, aliasque nobilioris: puta cor et caput per consensum laedens.

Ad debilem reducatur crisin, ut rite suo fungitur officio. /180/

primo igitur repurgentur prime via facili decoctione sequenti:

℞: sarsaparillae unc.ii, hermodactylis unc. i. s, guaiaci, liquiritiae ana unc. i, senae unc. ii, polypodii quercini unc. ii, epithymi unc. s, enulae campanae dr. vi, agarici, rhabarbari ana dr. ii, seminum anisi, carvi, coriandri ana unc. s. Macerentur in vase clauso in lib. 4 aquae fontanae, horis 24, deinde ebulliant. Cooperietur vas ne vapor exhalat. ℞ huius decoctionis lib. s, syrupi magistralis ad melancholiam unc. 4. Sit dosis a unc. ii ad 4. Rite purgata.

Deinde:

℞: electuarii chalybeati unc. i. s, de tamarindis unc. i. Misce. Dosis unc. s et utetur exercitio, et bis in septimana sic pilulis sequentibus purgata:

℞: pilularum stomachicarum, sine quibus ana dr. s, de paeoniae, chamaepyti ana sc. i. Fiant pilulae N. 12, iii hora somni. Deinde capiat electuarium ut pro Generosa Finnes, folio /168/. Pro surditate aqua cardui benedicti, bis probe destillata, et in aure destillata.

His intra paucos dies liberata, laus Deo.

[Case 174] Sanguinis sputum.

Degle de Bengwort, nutrix, aetatis 29; sputo sanguinis discolorata,
from obstruction and a diseased state of the spleen so that the
general function is affected directly and the nobler subsequently,
the pure head and heart suffering by consent.

To bring on a weak crisis so that [her body] performs its
functions, /180/ the [winds] should first be purged again, starting
in an easy way with the following decoction:

℞: sarsaparilla 2oz, colchicum 1½oz, guaiacum, liquorice each 1oz,
senna 2oz, polypody of the oak 2oz, dodder ½oz, elecampane 6dr,
agaric, rhubarb each 2dr, seeds of anise, caraway, coriander each
½oz. Soak in 4 pints spring water in a closed vessel for twenty four
hours, then boil. Cover the vessel so that no steam escapes. ℞: ½
pint of this decoction, magisterial syrup for melancholy 4oz. The
dose may be from 2 to 4oz. He was properly purged.

Next:

℞: steeled electuary 1½oz, of tamarinds 1oz. Mix. Dose: ½oz, and
she is to take exercise, and twice a week she was purged with the
following pills:

℞: pills - stomachic, sine quibus each ½dr, of peonies, ground-pine
each 1sc. Make 12 pills, 3 at bedtime. Then take the electuary as
for Mrs Fiennes, page /168/. For the deafness, blessed thistle
water, properly double distilled, was dripped into her ears.

These freed her within a few days, praise God.

[C\^ase 174] Spitting up blood.

Nurse Deacle of Bengeworth, aged 29: discoloured by spitting blood

Quicunque (ait Hippocrates) spumosum sanguinem expuunt, his e pulmone eductio fit: [...] a pectore enim qui exit, cum dolore reetitetur, quod pars ea membrana sit et nervosa pulmonum vero caro laxa, mollis et fungosa, ut Galen lib.4 de usu partium cap. xv et lib item sexto cap. x ... alitur enim pulmo (ut proxime citatis locis testatur Galenus) sanguine exacte puro, flavo, subtili et vaporoso. | 430Ruland the Elder, ‘Centuria III’, Curationum [...] centuriae, p. 203: Hic a me annuente Divina clementia mox liberatus est sic.

7 autem] ante.
from an eroded vein in the lungs, weakened and disfigured by yellow jaundice.

The erosion is due to bile, for from the lungs blood can be produced in many ways, either from an opening in a pulmonary vessel, or excessive thinning or even erosion. It is agreed that a vessel opened because of blood, and much hot corrosive blood broke out in this woman. Moreover, the expulsion of much thin, highly coloured blood mixed with froth indicates with full confidence the production of blood being driven out when a vessel has been opened, and more so if any pain appears in or near the chest with a troublesome cough (Hippocrates: ‘anyone who spits out frothy blood is bringing it up from the lungs’). What comes from the chest is discharged with pain because this part is full of organs and nerves. The flesh of the lungs is loose, soft and spongy; the lungs are fed with entirely clean, finely golden and vaporous blood.

I freed her quickly with the aid of divine mercy, and with the

for enemas 5dr, brown sugar 2oz. Make an enema.

These cured her, with the aid of almighty God most high.

[Case 175] Fit of the mother, melancholy.

Mrs Edith Stoughton, a gentlewoman: wretchedly afflicted with melancholy. Her periods had not yet started at 17 years of age. She was tortured by a fit of the mother so that she did not wish to live, does not know how to die. She is easily angered by her closest friends. She thinks that they say all kinds of things about her, and constantly shouts that her father is coming to kill her. At night she mutters and often declares that her father is coming with many others to murder her. She has been purged by an experienced physician, nonetheless her father entreats my advice. He asked firmly that I should not fatigue her with many remedies, of which she was exceedingly weary. I replied that a cure would be difficult, for her constitution and temperament had resulted in a melancholic state. Accordingly I did not wish to make many promises, but I judged that a cure could be started with a pleasant and supportive remedy.

First of all, her bowel movements should be freed with an

emollient clyster, dispelling wind but not cooking the humours:

℞: chicken broth (in which cook sorrel, pimpernel, borage, hyssop) 1 pint, common oil 2½oz, salt of tartar 1dr. Make an enema, repeat for two days.

Then she was purged in this way:

℞: the above broth 5oz, cream of tartar 4sc, oil of vitriol 5 drops.

Make a potion. Thus the natural humours will be restored to obedience. Next the left brachial vein should be opened. She was purged again /184/ the next day, then leaches were applied to the haemorrhoidal veins. She should be purged again with softening purgative medications (so as not to dry out the body) and preferably use stronger potions than pills, because pills are more drying. I therefore wished her to use Rodrigo de Fonseca’s helleborated apple.

She was rightly purged: Dose: hellebore 1dr cooked in an apple, afterwards remove and give the apple.

Humours should be diverted from the brain, the principal parts strengthened with bindings and stronger clysters:

℞: vitriolated conserves of roses, borage, bugloss each 1oz, preserved citron peel, red speedwell conserve each ½oz, electuary.

[Case 176] Scorbuti cura, Ianuarii i 1634.

Magister Thomas Underhil filius primogenitus, de Loxley, circa aetatis annum 12 plus minus; febre maligna, petechiis apparentibus, aestate praeterita laboravit. Postea in morbilos incidebat, perperam curatus, causa scorbuti. Cum meum petivit consilium, tumore dextri lateris circa costas spurious et nothas

---

'After purging, strengthen the heart and brain’, as the saying is. NOTE: We add moistening matter to all medications since melancholy comes mostly from excessive dryness. When I was strongly pressed about sleeplessness I gave simple diacodium 1 spoonful as she went to bed. I repeated it the next night because it promotes sweating and brings on sleep.

She is to use tartar often, for crystal tartar has great power to subdue /186/ melancholy and dark humours, as it draws to itself certain vinegary properties. An experiment can be made with sharp vinegar, for if one places four pints of very sharp vinegar and 1oz wine tartar in a container, water or phlegm are distilled at the fire without any dryness, because the tartar draws the acid spirits of the vinegar to itself by sympathy.

Thus she was freed from a most severe and long-standing illness, through the unique grace of almighty God most high.

[Case 176]38 Cure of scurvy. 1 January 1634.

Master Thomas Underhill, first born son, of Loxley, aged about 12 more or less: suffered the previous year from malignant fever with visible scabs. Then he fell into the measles and was incompletely cured, the cause of the scurvy. When he asked my advice he was weighed down by swelling of the right side around the false and floating ribs] the lowest five ribs, which do not connect directly to the sternum.

38See Appendix B: New Patient Identifications.
gravatus sine dolore et discoloratione, ita ut hepatis tumor
diudicatur, ipse macelentus ita ut sceliton diiudicares,
melancholicus, ulceribus nigris et crustosis tibiarum apparentibus.
His symptomatibus et vomitu inani et febre erratica, fastidioque cibi
laborante, scorbuto confirmato diu laborare diiudicabam, nec me
feellit opinio, nam urina rubra sicut /187/ in febre ardenti absque
tamen siti multa aut potus desiderio. Pulsus parvs, debilis et
inaequalis, vix digitis percipiebatur, quae signa manifesta scorbuti
confirmati, et languere magis quam aegrotare dixerit. Obtine me
parentes rogarunt, ut nihil eorum, quae ad valetudinem sui fili
pertinere putarem, missum facerem [...] id ubi ex officio me debere
parentibus ostendi curam longam difficilem.

Cura instituo hoc modo:
℞: tartari crystalli dr.ii, speciei trium santallorum dr.i, pulveris
Holland dr.ii. Misce, fiat pulvis pro 4 diebus: omni die 3 vel 4 sedes
sine torminibus. Locus affectus inungatur unguento fido
Valleriolae, ulceribus diaclactioes, deinde per iii dies tartari
cremoris dr.i mane, et hora post vini chalybeati nostri unc.4,
essentia fumariae et germandriæ (secundum Balduino Ronsseo,
folio 259, libro Senerti de scorbuto in octavo) unc.s, syrupi
becabungae unc.ii, nasturtii aquatici unc.i, succi cochleariae
praeparati unc.vi. Misce, dosis coch.4, et utetur exercitio, ex quo ii
sedes et vomitu. Primo die phlegma eiiciebat, 3a die diacurcumae

must have checked at least this reference].
floating ribs without pain or discoloration, so that I diagnosed
swelling of the liver. He was so thin you would have thought him a
skeleton, melancholic, with black crusted ulcers appearing on his
legs. From these symptoms and unproductive vomiting, erratic
fever, and aversion to food I judged that he suffered from long-
established scurvy. Nor did my opinion fail me, for his urine was
red as /187/ in burning fever, though without much thirst or
desire to drink. *His pulse was small, weak and unequal, hard to be
feel with the fingers*, which is a clear sign of established scurvy, and
he said *he was more tired than ill*. The parents asked me earnestly
to disregard nothing which I thought relevant to the good health of
their son. I made clear to the parents as I was duty-bound, that the
cure would be long and difficult.

I start the cure in this way:

℞: crystal tartar 2dr, diatrion santalon powder 1dr, Holland powder
2dr. Mix. Make a powder for four days: three or four stools each
day without discomfort. Anoint the affected area with Valleriola’s
*Fidum ointment* and diacalchitis for the ulcers, then cream of tartar
for three days: 1dr in the morning and an hour later our steeled
wine 4oz, with essence of fumitory and germander ½oz. (following
Baudouin Ronsse, page 259, in Sennert’s book *De scorbuto*, in
octavo) brooklime syrup 2oz, watercress 1oz, prepared scurvy grass
juice 6oz. Mix. Dose: 4 spoonfuls and he is to take exercise,
resulting in two stools and one vomit. The first day he vomited
phlegm. On the third day: diacrocuma ½oz in the morning, and

unc.s mane, et postea vinum chalybeatum. Omni 3a die purgatus diatartaro Quercetani coch.s, in pomo sub cineribus cocto. 452 Usus birea antiscorbutica nostra. Spleni applicare iubebam emplastrum de ammoniaco Forresti.

Usque aliquando potum:

℞: succi cochleariae lib.s, syrupi becabungae, nasturtii aquatici ana unc.i.s, pro iii matutinas. Non omisit vinum chalybeatum cum succo cochleariae et syrupo becabungae et nasturtii aquatici per totam mensem. /187b/ Purgatus pilulis de ammoniaco Riverii: ex dr.s fiat pilulae N.3. 453 Capiat pilulam unam omnia tertia die, ex qua 2 vel iii sedes. Hora cubitus, mane, purgatus. Latere dolenti et tumido, unguentum ex unguento splenitico magistrale unc.i, unguenti dialtheae unc.s, mane et sero. Usus birea nostra antiscorbutica, omni alio interdicto. Post usum pilulorum praedictorum per ii dies, in tumorem pedum dolorificum incidebat, ut nocte dormire non potuit, nec diu pedum movere ob omnem levem tibiarum motum animae paene deliquium habuit.

Me veniente, ad corroborationem stomachi dabam pulveris Pannonici rubri sc.i, magisterii corallorum sc.s, lapidis bezoar gr.iii.

Iubebam tibias in decoctione sequenti:

℞: becabungae M.4, absinthii, meliloti, chamaemillae, salviae ana M.i. In satis quantum bireae fiat balneum, bis in die usque a tumore et dolore spacio 3 dierum penitus liberatus. Purgatus

---

452 Du Chesne, *De priscorum philosophorum [...] materia*, p. 330; [according to the text, the recipe is also to be found in the *Pharmacopoea Dogmaticorum*, possibly pulvis melangogus Quercetani, p. 126, to which it is similar]. | 453 Du Chesne, *Pharmacopoea dogmaticorum*, pp. 120-121: hoc utique unum erat ex numero praecipuorum purgantium D. Rivieri [following the recipe].

9 /187b/ Strictly 188; Hall has repeated the previous page number.
afterwards steeled wine. Every third day he was purged with Du
Chesne’s diatartar ½ spoonful, cooked in an apple under ashes. He
used our antiscorbutic beer. I ordered Foreest’s ammoniac plaster
applied to the spleen.

To drink, always, at any time:

℞: scurvy-grass juice ½lb, brooklime, watercress syrups each 1½oz,
for three mornings. He did not omit the steeled wine with scurvy
glass juice and brooklime and watercress syrup for the whole
month. /187[b]/ He was purged with Rivière’s ammoniac pills.

Make 3 pills from ½dr. Take 1 pill every third day, resulting in two
or three stools. He was purged at bedtime and in the morning. For
the painful swollen side: an ointment of magisterial splenic
ointment 1oz, marsh mallow ointment ½oz, morning and evening.
He used our antiscorbutic beer, all others being prohibited. After
using the above pills for two days he fell into a painful swelling of
the feet, so that he could not sleep at night nor move his feet any
more, and he almost fainted from every slight movement of the legs.

When I came, I gave red Pannonian powder ½sc, magisterium
of corals ½sc, bezoar stone 3gr to strengthen the stomach.

I prescribed the following decoction for his legs:

℞: brooklime 4 handfuls, wormwood, melilot, chamomile, sage each
1 handful. Make a bath in sufficient beer, use twice daily without a
break. He was completely freed from the swelling and pain within
three days. He was purged with pills - Ruffus’s, stomachic and
pilulis Ruffi, stomachi, hierae cum agarico ana [xxx]. Fiant pilulae
6. Detur i hora somni. Tandem tibiis bene curatis, misere dolore
humeri dextri cruciatus. Unguento fido 24 horarum spacio
liberatus, nunquam praeter misit vinum chalybeatum nisi die
purgationis.

Post pastum pulverem sequentem, quantum super 12 [denarii]
tenere potuit, devorabat:
℞: speciei pleres archonticonis unc.s, sacchari unc.ii. Misce.
Maxime et bis in septimana purgatus pilulis Riverii ut supra.

Aliquando pilulas ii mane, ex quibus 3 vel 4 sedes:
℞: pilularum de ammoniaco dr.i, gummi gambogiae praeparati gr.9,
sine quibus dr.s.

Hac methodo laus Deo curatus.

[Case 177] /188/ Magister Iohannes Trap,
theologus, ob insigne pietatis et doctrinae nulli
secundus, 33° suae aetatis anno vix exacto,
natura melancholicus et litteris deditus.

Superiori anno in melancholiam hypochondriacam et dolorem
lienis cum anexis symptomatibus scorbuticis incidebat, nimírum
respiratione difficili post levem corporis motum, palpitatione cordis,
precipiti quasi motu flatus ad cor irruens, ita ut lipothymiae metum
ipse haud levem incussit. Flatu disperso, post breve tempus melius
fuit. *Fæbre denique lenta erratica, anorexia et animi languore*

assydus *conficiebatur et insolito marcore, unde ad tabem deduci*
hiera with agaric each [xxx]. Make 6 pills, give 1 at bedtime.

He swallowed the following powder, the amount that can be held on twelve [pennies], after food:\n

18 tartari | 9.
feebleness of spirit and unaccustomed faintness, from which everyone concluded that he was wasting away. After he finished his sermon on Sunday his strength was exhausted. He could hardly speak.

I however, having observed the sudden change of the urine and uneven pulse and from being aware of his customary way of life, declared that he suffered from atrophic scurvy, the more so because with these he had worrying troubles in his precordium at intervals. In agreement with the sufferings from this atrophy, his body was often more tired than ill, so that he complained of nothing more than weariness of the body. When first assaulted by this illness he used common medicines to no purpose, and at last asked my help and advice.

With these few remedies, without any annoyance, nausea or unpleasant taste of medicines, we rescued this learned young man from the jaws of death entirely, quickly and pleasantly, and restored him to health. He lives very well, enjoying good health. To God thrice greatest be praise and glory for ever. Amen.

11 March 1635:

℞: vitriolated tartar 4sc cooked in an apple under the ashes. This produced a greater quantity of urine, coloured indeed like spring water. He had two stools.

\(1\) mercurii ♂. \(2\) tartari ♢. 199; Hall's numbering jumps ten pages. \(3\) /199/ Strictly 190; Hall has jumped ten page numbers from the previous page. | 14\) in margin. \(4\) Tartari ♢. \(6\) 15\) in margin. 19 19\] in margin.
℞: mercurius dulcis 20gr, vitriolated tartar 1sc, prepared gamboge gum 3gr. Give as before: four stools.

14th:
crystal tartar 1dr: one stool. He held our pectoral rolls in his mouth at night, for cough and catarrh.

15th:
℞: our steeled wine 4oz, with Foreest’s scheletyrbic syrup 3oz: on the first day 2 spoonfuls, on the second 4 spoonfuls. He exercised for two hours.

To strengthen the spleen:

℞: large raisins ½lb. Boil in good wine to the consistency of a poultice, sift through a sieve and mix with rosemary, bugloss conserves each ½oz, powders of laetificans, aromatic roses, cold diamargiton, diacinamomu each 2sc, sweet-smelling aloe wood ½dr, preserved citron peel, cinnamon powder each 1dr, finely powdered prepared steel filings ½oz (prepared with sulphur following Du Chesne) oriental saffron 1sc. Mix. Take the amount of a chestnut in the morning.

19th:

---

16 following Du Chesne| S.O. omits. 17 chestnut| S.O.: a filbert.

Aprilis 2:

5 Purgatus ut antea cum quo assellavit 4 vicibus. Per iii dies vinum exhaustit chalybeatum.

7 die:

Purgatus, tartari cremoris dr.i. Biream nunc habuit nostram antiscorbuticam. Electuario finito, caepit coch.vi sequentis aquae:

His, Dei nutu, ab omni dolore liberatus, ut rite recteque curatus et mihi ingentes reddebat gratias. Laus Deo.

[Case 178] /200/ Comes Northamotoiensis circa aetatis annum 32, veredo celeri canes venaticos assequitus tempore frigido et pluvioso, frigore accepto, repente pleuritide

5 assellavit] assellavit. 8 tartari] t. 23 /200/] Strictly /191/; Hall has continued from the previous incorrect page number.
℞: magisterial syrup for melancholy 2oz, bugloss water 2oz, finely powdered tartar 1dr. Mix. He evacuated 4 times. The next day he used steeled wine as before.

2 April:

Purged as before, *by which he evacuated four times*. In three days he finished the steeled wine.

7th:

Purged, cream of tartar 1dr. He now had our antiscorbutic beer. When the electuary was finished, he took 6 spoonfuls of the following water:

℞: our snail water, simple frog water each 4oz, alkermes confection 2sc, pearled manus Christi ½oz, Forrest’s scheletyrbic syrup 2oz, our *antiscorbutic water* 6oz, *splenitic* 2oz. Mix. This water was consumed and drunk. He asked for the electuary again, in which he said there was the greatest hope of a cure. He said it was worth gold. He used the electuary again for eight days. Every fourth day he was purged, but complained of bitterness in the mouth. Our chymical cup: 5dr. He was freed and again returned to the use of the electuary.

These by god’s will freed him from all pain, and cured him rightly and properly and he thanked me greatly. Praise God.

[Case 178] /200/ The [second] Earl of Northampton, about 32 years old, following his hunting dogs on a swift steed in cold and rainy weather: caught a cold and was wretchedly attacked

---

ventosa et tormine ventris misere lancinatus *ad verae pleuritidis similitudinem*. *Tussiculam, inquietudinem, febriculam, sitim et dolorem distensivum adfert.*

Me praesente cum domum reversus, glister hunc prescribebam:

℞: decoctionis communalis pro clystere lib.s, diaphaeniconis, diacatholiconis ana unc.i, pulveris Holland dr.ii. Fiat clyster, sedes iii cum magna flatuum copia, cum exoptatu eventu nam dolor mitigatus.

In thorace adhuc sentiebat punctionem pro quo expellendo:

℞: *unguenti dialtheae unc.ii, olei amygdalarum dulcium unc.s.*

Dissolvantur et misceantur *ad ignem pro unguento, quo cum inunxissem pectus et latus. Superimposui linteum duplicatum tepide butyro perlitum, et dolor remisit,*

シークレット バンク:<br>solebat, *somno complexus.*

Die saepe syrupis his expertis usus:

℞: syrupi scabiosae magistralis, capillarum veneris, liquiritiae, hyssopii ana unc.i. Capiat saepe cum baculo liquiritiae. Nocte rotulam unam pectoralem nostram in ore tenebat. Mane iterum inungi vellem.
by a sudden windy pleurisy and abdominal colic, very like a true
pleurisy. It caused a small degree of coughing, restlessness, fever,
thirst and painful distension.

Being at hand when he returned home, I prescribed this

enema:
℞: common decoction for an enema ½ pint, diaphoenicon,
diacathicon each 1oz, Holland powder 2dr. Make an enema: three
stools with a large amount of wind, with the desired result for the
pain eased.

At this point he felt a pricking pain in his chest, to banish
which:
℞: marsh mallow ointment 2oz, sweet almond oil ½oz. Dissolve and
mix at the fire for an ointment, with which I anointed the chest and
sides. I placed over it a folded cloth smeared with warm butter. The
pain diminished, the night was restful, and he was seized by heavier
sleep than was his custom.

During the day he used these proven syrups frequently:
℞: magisterial scabious, maidenhair, liquorice, hyssop syrups each
1oz. Take often with a liquorice stick. At night he held one of our
pectoral rolls in his mouth. In the morning I wished him to be
anointed again.
Penitus a dolore liberatus, et mensae in cenaculo assedebat.

[xxx].

2 xxx] Uncertain abbreviation; a possible reading is trœs c, which might be read terminus curae referring only to this one report, or terminus curarum referring to the whole manuscript. Either would be unique in the manuscript. If the latter reading is preferred, then Hall deliberately chose to end the Libellus at this point, though in a surprisinly low key. Neither alternative is certain enough to include in the text.
He was completely freed from the pain and sat down to eat in his dining room. [xxx].

1 and...room] S.O. omits. 2 xxx] Abbreviation, see Latin fn concerning the uncertain reading: I suggest the translation is either 'Finished, the end of the cure', or 'Finished, the end of cures'. The first would relate only to specific case, though as such it would be unique. The latter would imply that Hall decided to end the entire manuscript here, in which case it seems rather abrupt. I have not felt confident enough to give a translation in the text.
CHAPTER 1: RECREATING HALL’S WORKING LIBRARY

The identification of Hall’s working library is significant in several contexts. It is the essential first step for my immediate needs, towards answering further questions about when, why and how Hall acquired his books, what he did with them and how they reflect his approach to practice. Hall’s books help us to see how an English physician in the seventeenth century used his medical library (or at least the Latin part of it) in two different ways. My thesis is that he used it both to identify therapies for his patients during his working practice, and also to help him turn his initial case notes into the draft for a book in Latin. Vivian Nutton writes that ‘medical historians and historians of the book can benefit from each other’.¹ I hope this study can contribute to that mutual benefit, by expanding our knowledge of the link between physic as practised and as presented in learned Latin texts.

I begin by discussing briefly the historiography of medical libraries and books before identifying the books in Hall’s working library. The qualification of ‘working’ is important, as there is no reason to believe the books Hall used were the only ones he possessed. What can be put together is a partial list based on the books Hall chose to use. These reflect two aspects of his working life: first, sources of remedies used in treating his patients; second, sources used in composing his Little Book of Cures. The working library is based partly on information in Hall’s manuscript but missing from Select Observations, and partly on anonymous

borrowings which Hall made from his books. Hall’s borrowings make up between thirty and forty per cent of the whole of his text, a remarkable proportion. Such a use of texts has not been described in any other casebook from Hall’s period.

I then consider the nature of Hall’s books, and the relationship between them and the periods of his life at which he acquired them. This leads to consideration of the networks through which he would have been able to buy books while living in Stratford-upon-Avon. Finally, I compare Hall’s working library with the contents of other libraries and book lists of the period.

1.1 EARLY MODERN MEDICAL LIBRARIES

The two major sources for English libraries, *Books in Cambridge Inventories* and the *Private Libraries of Renaissance England* series (PLRE) are considerably more sparse for the early seventeenth century than they are for the sixteenth. Cambridge inventories with medical content jump from Thomas Lorkin (Professor of Physic at Cambridge, 1564-1590) to John Nidd (ca.1620/30-1659). Nidd was not medically qualified but left over a hundred medical texts. The PLRE volumes (so far up to volume 8) contain no medical collections of relevance for the last decade of the sixteenth century or later. Identifying a library, even a partial one, for the years between 1600 and 1650 adds important new information. My methodology for this described in Appendix A. It may be useful in other contexts in which the contents of libraries have to be identified indirectly from a study of book use.

---

Vivian Nutton recently wrote that ‘the history of the medical book in the renaissance is only just beginning’. This chimes with a more general view that ‘there is scope both to increase our knowledge of the facts and also thereby our understanding of the significance and impact of book owning’ in relation to English private libraries in the seventeenth century. Such attention as has been given to English medical libraries has concentrated mainly on the sixteenth century and earlier. The seventeenth century has been treated as an afterthought, if at all.

It is a commonplace in the history of early modern medicine that Latin was the language in which the learned, university educated, physicians received their education. The texts required in medical curricula were in Latin, though English ones might have had a supporting role. Yet much of the secondary literature on libraries implicitly or explicitly excludes Latin texts in favour of the vernacular. Even when the importance of Latin for medical

---

6 Siraisi, Medieval and Early Renaissance Medicine, p. 50; Jones, ‘Medical Libraries’, p.117.
education is recognised, the subsequent use of it in medical practice is underplayed by comparison with vernacular texts.

Andrew Wear noted the importance of Latin literacy in medical education, but goes on to say that ‘knowledge of medical theories and therapeutic practices were largely communicated to practitioners ... by vernacular texts’. Though he observes that medical books in Latin were imported in large numbers, he points to the overwhelming publishing of English texts in England to support his argument that the vernacular was the main medium of communication. In a contrasting view C.D. O’Malley regarded English physicians as mostly ‘content to place reliance upon continental books that they imported’, while they ‘disdained the use of the vernacular’. Peter Murray Jones notes that medical Latin texts were owned by both non-medical and medical Cambridge academics who ‘shared a medical culture whose language was Latin’. His observation relates though to ownership rather than how the owners used their books.

These mixed views of the Latin and vernacular literature in physicians’ and other libraries is the background to my study. Hall relied almost entirely on Latin texts in his practice and in writing his manuscript. This is not to say that he did not own or read English medical texts, but for professional purposes the Latin texts were the important ones.

8 Wear, *Knowledge and Practice*, pp. 35-36.
1.2 RECREATING HALL’S WORKING LIBRARY

What might we surmise about Hall’s books, in the absence of evidence from his own manuscript? We know that he inherited his father’s medical books on his death in 1607. Little is known of William Hall (died 1607). He may have been a physician, an empiric or a gentleman with the vernacular and Latin medical books which were common in a gentleman’s library. William Hall also referred to books on astrology, astronomy and alchemy in his will. There is no sign in John Hall’s manuscript that he shared his father’s interests in terms of medical practice.

John Hall was a medical student at Cambridge from 1589 to 1597. An anonymous Cambridge bookseller’s probate inventory of 1588/89 gives an idea of the kind of books which appealed to the medical readers at the time. It contains works by Hippocrates and Galen, epitomes and commentaries on them and books in both Latin and English by sixteenth-century authors. Such books might be shared and borrowed by students as well as bought, but all these and others were available to the student with deep pockets, generous parents or helpful tutors.

So far this could apply as a generality to any student of the period, but in Hall’s case we can turn for a more personal view to Select Observations. James Cooke, translator and editor of Select Observations, visited Susanna Hall specifically to see her late husband’s books in 1642, suggesting a collection worth viewing. He referred to Hall’s interest in scurvy and claimed that he was ahead

---

of his time in its treatment. The literature on scurvy was extensive by Hall’s time, so he would have had a wide range of texts to choose from. Cooke added that Hall had travelled abroad and knew some French, so might have owned one or more books in that language.  

Harriet Joseph’s commentary on Select Observations identified six of Hall’s sources: Johannes Crato von Krafftheim (1519-1585), John of Gaddesden (ca. 1280-1361), Joseph Du Chesne (1544-1609), Horst (either Jakob (1537-1600) or Gregor (1578-1636), Daniel Sennert (1572-1637) and Severinus Eugalenus (1535-?). The reference to Du Chesne includes the title of his book – Diaeteticon polyhistoricon (wrongly abbreviated by Cooke as Diaetet. polychrest.). The references to Sennert and Eugalenus include page numbers (not always accurate) but not titles. The page numbers and contexts make it possible to identify the books as Sennert’s De scorbuto tractatus and Eugalenus’s De scorbuto morbo – confirming Hall’s interest in scurvy. Joseph identified the other authorities – Crato, John of Gaddesden and Horst – from eponymous remedies rather than references to books. Joseph was correct in identifying Crato as one of Hall’s borrowings, though her evidence on this point was not good. She was referring to Hall’s use of Crato’s amber pills (pilulae de succino) but this preparation is listed in both the Pharmacopoea Augustana and the Pharmacopoeia

---

14 Hall, Select Observations, 1st Edn, Sig. A3r-A4v.
15 Joseph, Shakespeare’s Son-In-Law, p.xiii.
16 Joseph Du Chesne, Joseph, Diaeteticon polyhistoricum [sic] (Frankfurt: Schönwetter, 1607)
17 Daniel Sennert, De scorbuto tractatus (Wittenberg: Zacharia Shürer, 1624); Severinus Eugalenus, De scorbuto morbo liber (Leipzig: Michael Rantzenberger, 1604)
Londinensis and might have been obtained from one of those. It proves no direct connexion between Hall and Crato’s own writings.

Hall’s manuscript contains many more references to medical authorities which Cooke removed from Select Observations. Some mention a particular book, others a person or an eponymous name in a remedy. Table 1 lists the authorities named in the manuscript including those identified by Joseph. Horst is now identified as the younger Gregor. This expanded list shows that Hall drew on a much wider range of texts than Select Observations alone suggests.

The twenty authors and twenty-two books identified from the manuscript are a fairly mixed selection. Bernard Penot (ca. 1520/30-1617) and Oswald Croll (ca.1560-1609) were at the Paracelsian extreme of chymical practice, while Crato was firmly
opposed to Paracelsus’ ideas. Other authors – Ruland the Elder (1533-1602), Joseph Du Chesne, Felix Platter (1536-1614), Sennert (1533-1602) for instance - were chymiatric in orientation but not Paracelsians. The Galeno-Hippocratic tradition is also represented by books from the mid-sixteenth century. Those by Amatus Lusitanus (1511-1568), Giovanni Battista da Monte (1498-1551) and Valesco de Taranta (1382-1418) were all published between 1550 and 1560.

One unusual book listed is *Thresor de remedies secrets pour les maladies des femmes* by Jean Liébault (ca.1535-1596). This is in French, which must have been Hall’s choice as it was also available in Latin. This is the only evidence to support Cooke’s claim that Hall ‘had been a traveller, acquainted with the French tongue’. Judging by the manuscript, Hall’s acquaintance was slight: he added a translation in a mixture of English and Latin between the lines of the French text he borrowed. Perhaps he bought the book as much to practise his French while travelling as for its medical content.

The differences between the lists for *Select Observations* and the *Little Book* throw some light on Cooke’s activities as an editor and his deliberate creation of Hall as a physician driven by empirical observation. John Bird’s foreword ‘To the Judicious Reader’ undercuts the importance of books in Hall’s practice.

---

Prescriptions from learned sources fell ‘short in performing the cures they promise’ and were not as trustworthy as first-hand experience.21 Cooke’s and Bird’s words should not be taken as entirely disinterested. They were in effect writing advertising copy, not neutral appraisals.

Cooke removed all references to texts except those by Du Chesne, Sennert and Eugalenus (and in fact did remove most references to the latter two). The excisions were not random. Most were from sixteenth-century sources, while those retained were from seventeenth-century books. There are exceptions in both directions. For example, John of Gaddesden remained in Select Observations despite his Rosa Anglica dating from the fourteenth century. Several references to the Pharmacopoeia Londinensis (published 1618) were removed. Their presence would have undercut Cooke’s claim that Hall was not interested in authorities.

There is written evidence in Hall’s manuscript for all the titles listed above. To these books must be added the final set of sources, the anonymous borrowings identified by on-line searches (see Appendix A for the methodology). The additional titles and authors added are listed in Table 2. This brings the complete list of Hall’s working library to forty-three authors and sixty titles, which are listed in the bibliography under ‘Hall’s Working Library’.

The count is conservative. The number of texts could have been made much higher by counting each separate century of Ruland the Elder’s Curationes as a separate publication, the format in which they were published in the 1580s and 1590s. As they were

---

21 Ibid., Sig. A6r-A6v.
also published in a single volume in 1577 I have counted them as a single book. Similarly, Sennert’s *De scorbuto morbo tractatus* contains, as well as his own work, reprints of texts on scurvy by Baudouin Ronsse, Johann Echt, Johannes Wier, Johann Lange, Salomon Alberti and Mathaeus Martini. There is no evidence that Hall used any of these independently of Sennert’s volume, so only the latter is included in the library. A different problem is encountered with the borrowings from Crato. As well as appearing in books under his name, several but not all of the borrowings from Crato appear in the massive compendia by Johannes Schenk von Grafenberg (1530-1598).\(^{22}\) These do not provide any additional borrowings not found elsewhere. Relying on Crato’s volumes alone gives the lowest number of books needed to cover all Hall’s identified borrowings from this author.

\(^{22}\) Johannes Schenk von Grafenberg, *Observationum medicarum, rararum, novarum, admirabilium, et monstrorum, tomus unus (tomus alter)* (Frankfurt: Rhodius, 1600).

</table>

The three books with English titles are worth noting. They were all written predominantly in English, but in each case Hall made use only of Latin borrowings. Two of them are religious works, by Thomas Adams (1583-1652) and John Donne (1572-1631). Their paths may have crossed around 1621 when Adams was a preacher at St Gregory by St Paul’s and Donne was Dean of
St Paul’s Cathedral. Adams was a Puritan vicar and preacher whose sermon *Mystical Bedlam* used madness as an allegory of different ways of falling off from godliness. Hall used as one of his epigraphs a sentence from ‘The Impatient’ who, ‘when the ties of softer afflictions will not hold him, he must be manacled with the chaines of judgements’.23 John Donne’s *Devotions upon Emergent Occasions* describes Donne’s physical and spiritual course through a severe illness. Hall used a line from the *Devotions* to describe a treatment he received during his own illness, the application of a live pigeon to his feet to draw down the humours.24 Descriptions of this therapy were available in standard medical texts, but Donne’s more religious expression of what it was to be seriously ill must have spoken directly to Hall’s own circumstances and religious beliefs.

The third English book which Hall used was that monumental work, *The Anatomy of Melancholy* by Robert Burton (1577-1640). In the Second Partition, Section 1, Member 4, subsection II, Burton considered the need for patients to be ‘conformable, and content to be ruled’ by their physician. Among the authorities he quoted are da Monte, giving an English translation in the main text and Latin paraphrases in two footnotes. Hall used Burton’s footnotes rather than da Monte’s original text.25 The context was a conversation with a patient, in which Hall asked

---

for and received assurances of the patient’s cooperation during a long and difficult treatment. It demonstrates the way Hall used concepts from his sources in his discussions with patients, though it does not prove that the words in his text were precisely those he used in conversation.

The extent of Hall’s borrowings seems to have been unique, but there is evidence that other physicians did the same to a lesser degree. Hall himself provides evidence of this. Mrs Delabere (Case 111) went to Bath and was prescribed a sweating decoction to use after bathing. Her remedy was based on a mixture of two recipes taken from Du Chesne’s *Pharmacopoea dogmaticorum*. Hall did not state who prescribed this but it was clearly not him. From another source, John Symcotts started his ‘Observations 1636’ with sentences in Latin, the first taken from Sennert’s *Opera omnia*: ‘Si multi pravi succi in corpore abundant purgationes periculosiores sunt’ (If many corrupt humours abound in the body, purgations are more dangerous). This is followed by a longer extract also from Sennert, expanding on the same subject. Symcotts went on to describe cases from his own experience exemplifying this problem.

Hall was used as an unattributed source himself, by James Cooke in *Mellificium chirurgiae*. Cooke follows the custom of the time by listing in his preface several authorities from whom he took remedies. Among those he mentioned in his address ‘to the young

---

Chyrurgeon’ and which were also used by Hall are Sennert, Beguin, Potier, Foreest, Houllier, Ruland, Plater and Du Chesne. Cooke continues:

besides thou hast the secrets of practitioners, whose names are worthy to be mentioned, and should if it were not for fear of offending them, they came unexpectedly into my hands, and are as freely set out for thy benefit.

One recipe which Cooke very probably borrowed from Hall is his treatment of Mrs Wincoll (Case 10) for prolapsed anus. Hall took this from Penot’s *De denario medico*. Cooke was writing a textbook not a series of case reports, so his grammar differs from Hall’s manuscript and from *Select Observations*. His remedy (in Latin) is nonetheless almost identical to Hall, Penot and his own translation in the first edition of *Select Observations*. The English directions for treatment which follow are clearly from the same source. Further evidence of Cooke’s use of Hall is his comment before giving the recipe: ‘externally use this fomentation, with which two was cured’. Hall had added at the end of his report on Mrs Wincoll that he had successfully treated one of Mr Broad’s servants in the same way.

---

30 Penot, *De denario medico*, p. 64.
32 Cooke, *Mellificium chirurgiae*, pp. 308-309: Foment with linen stuffes as hot as can be suffered, after which with the finger put it in its proper place, then with a sponge wet in the same decoct and wrung forth, applied hot to the fundament, and sit upon it; compare *Little Book*, p. /12/, Hall, *Select Observations*, p. 16.
1.3 **THE FREQUENCY OF HALL’S USE OF SOURCES**

As a measure of how often an author was used by Hall, a count of his borrowings is less quantitatively objective than might appear. Sometimes Hall used all the sentences of a paragraph but reordered and combined with other borrowings. I have had to use my judgement on whether to count such examples as a single borrowing or as several. The results are nevertheless sufficiently clear to allow for some conclusions.

Thirteen authors (30 per cent) contributed 352 (80 per cent) of the 438 total borrowings identified (Table 3). The first four authors listed contributed over half of all borrowings, with Ruland the Elder on his own contributing a quarter.

The list contains both earlier and later authors. Ruland the Elder, Valleriola, Bruele, Crato, Amatus Lusitanus and Foreest are all of the sixteenth century. Sennert, Eugalenus and Horst only arrived in Hall’s library after the mid-1620s, so their high rankings are based on relatively few years’ use. These three are all
associated with Hall’s interest in scurvy, so their presence testifies both to Hall’s growing interest in the disease and to his dependence on learned texts for his knowledge of it. The other seventeenth-century authors, Ruland the Younger, Platter and Du Chesne, represent chymiatric practice, but not on a narrow Paracelsian model. Entirely absent from the list are Hall’s more strongly chymiatric purchases of the Stratford-upon-Avon years (1607-1635). He seems to have purchased them, tried one or two recipes, but then returned to his small number of familiar sources.

It is important to emphasise that frequency of use implies familiarity with a text, but not necessarily relevance to therapeutic use. Of 258 borrowings relating to therapies, 202 (78 per cent) came from fourteen (31 per cent) authors (Table 4).

Twelve authors are common to both Tables, but there are some changes in rankings. Ruland the Elder’s percentage has fallen by half and Platter is now the most frequently used author. The explanation is that a large number of Hall’s borrowings from Ruland

532
are expressions of thanks for divine favour, used as codas to conclude the report of a successful cure. It appears that Hall’s interest in Ruland was as much for these suitable avowals of a religious nature as because of his therapeutic content. Otherwise the balance between sixteenth- and seventeenth-century authors remains unchanged. The absence of Eugalenus is explained by the nature of his book: it concentrates mainly on the diagnosis of scurvy, contains little on therapy. What little it does provide is too general in most instances to be of practical use.

1.4 GENRES AND CATEGORIES OF LATIN MEDICAL TEXTS

So far I have treated Hall’s books as individual entities. It would also be informative to consider them in groups with similar characteristics but this calls for a method of creating the groups. Here I consider different methods of creating such groups, and their usefulness in relation to Hall’s books.

Several historians have touched on the varieties of Latin medical books dealing more with practice than theory which were published in the sixteenth and seventeenth centuries. This has appealed particularly to scholars with an interest in the history of ideas. They have tended to deal more with the concepts in medical books than the use their owners might have made of them. In distinction to the historiography which exists on English libraries and vernacular texts, this approach is concerned primarily with Latin texts and therefore has a Europe-wide context.

The historian of ideas Joël Coste has proposed a division of practical books into four broad genres: practicae, consilia, regimens
and pharmacopoeas or dispensatories. Nancy Siraisi’s work covers similar ground, but with particular emphasis on consilia and epistolae. Ian Maclean has put the various types of medical books into a wider context of book ownership and readers. Gianna Pomata has analysed curationes and observationes in most depth and provided concise descriptions of these and other forms of medical writing. Using these sources it is possible to create a broad chronology of the changing words used in the titles of books through the sixteenth and seventeenth centuries. The views of the authors mentioned are in broad agreement and are summarised in the following paragraphs.

Practicae had their roots in medieval medicine. In the early sixteenth century they were being written primarily by university-based physicians rather than by those working in towns or courts. They dealt with diseases and remedies rather than patients, following a standard pattern of presentation, starting with illness of the head and ending with the feet. General illnesses such as fevers were often dealt with separately.

---

36 Pomata, Praxis Historialis; Pomata, ‘Sharing Cases’.
37 Maclean, Logic, Signs, p.46.
38 Ibid., p.56.
Consilia were written replies, often from a senior to a more junior colleague, to a request for a second opinion.\textsuperscript{39} They were structured rather to put an illness tidily into a theoretical framework than to examine the illness as it presented in an individual patient.\textsuperscript{40} Epistolae were related to consilia. These circulated widely, initially as letters between physicians but then often collected in books. They covered a wider range of topics than consilia, in less formal style.\textsuperscript{41} Silvia De Renzi has shown that consilia and epistolae were genuinely part of the working life of a physician, not necessarily written for publication.\textsuperscript{42} Consultationes is another term frequently encountered, usually indicating a mixture of consilia and epistolae.

Curationes were collections of successful cures designed to legitimise therapies by their practical success. They first appeared around the middle of the sixteenth century. They suited town and court physicians who needed to advertise their successes in order to compete in the medical market place. Evidence of successful treatments was supported by references to the names of the successfully treated patients. This element of self-advertisement connects them to the writings of Galen as models.

Observationes developed slightly later in the sixteenth century. They put more emphasis on careful observation of each individual patient without necessarily concentrating on successful outcomes. A crucial innovation was the use of personal experience of patients and treatments as a subject for learned commentary.

\textsuperscript{39} Ibid., ‘The Medical Republic of Letters’, 19.
\textsuperscript{40} Siraisi, ‘Medicine 1450-1620’, p. 502.
\textsuperscript{41} Siraisi, \textit{Communities of Learned Experience}, p. 3-7.
\textsuperscript{42} De Renzi, ‘A Career in Manuscripts’.
According to Pomata this approach owed more to Hippocrates than Galen, but others have emphasised a revived Galenic interest in them as well.\textsuperscript{43} According to Nutton, \textit{Observationes} was used in titles from around 1560 but it was not ‘a fashionable headline for a book’ before the end of the sixteenth century.\textsuperscript{44} It went on to become the predominant title and model in the late seventeenth century, as evidenced by Cooke’s choice of \textit{Select Observations} as the title for his editions of Hall, rather than following Hall’s use of \textit{Curationes} in his title.

Maclean and Pomata have provided contrasting ways of understanding these and other terms. Both use the word genres as a label for the groups they propose, but use it in very different ways.

Maclean, in \textit{Logic, Signs and Nature}, states that medical genres ‘can be distributed in various ways’.\textsuperscript{45} He refers to Pascal Lecoq’s (1590) bibliography as an example of a categorisation from the sixteenth century.\textsuperscript{46} Maclean’s own choice is to ‘attempt a distribution by readership rather than subject’ which in practice becomes a division between books for students and those appealing to a wider readership. Among books for students he includes general texts on practical medicine (particularly those based on lectures) practicae, consilia, compendia. He also puts volumes dealing with single topics such as ‘syphilis, childhood diseases and

\textsuperscript{44} Nutton, ‘Pieter van Foreest’, p. 26.

\textsuperscript{46} Pascal Lecoq, \textit{Bibliotheca medica sive catalogus illorum, qui ex professo artem medicam in hunc usque annum scriptis illustrarunt} (Conrad Waldkirch: Basel, 1590) http://books.google.com/books?id=mMGaNuKfC38C.
gynaecology’ in this group. Books with broader appeal include those touching on natural philosophy, Aristotelian handbooks, alchemy and astrology, remedies, and remarkable cases).

Pomata in ‘Sharing Cases’ offers a much tighter definition of what constitutes a genre. Though her subject is primarily observationes, she considers other genres (practicae, consilia epistolae and curationes) insofar as they touch on the development of observationes from the mid-sixteenth century through to the end of the seventeenth century. For Pomata, these are not variable distributive criteria in Maclean’s sense but are ‘epistemic genres’, that is, genres ‘recognised and employed by the native members of a culture’. She does not state, but it is implicit in her discussion that the ‘native members’ referred to are early modern physicians (or at least the book-writing minority among them) and not medical historians. Pomata also states that ‘a striking aspect of early modern medical literature is the variety of genres indicated by the very titles of publications’.

Neither Maclean’s nor Pomata’s model of genres meets my need to categorise Hall’s books. This is not to say that they are not valuable in other contexts. Maclean’s genres are personal to his needs, while leaving it open to others to distribute books differently. Pomata’s epistemic genres are, if she is correct, not open to such personal choice, and further, are reflected in the titles of books. Certainly observationes and the related words were ‘recognised and employed’ by physicians, but it does not follow that each had a

48 Ibid., pp. 57-58.
49 Pomata, ‘Sharing Cases’, p. 196.
50 Ibid., p. 194.
separate and distinct meaning when used in the titles of practical medical textbooks. Pomata recognises that the meanings of words such as observationes changed over time.\textsuperscript{51} Many texts had titles reflecting more than one of her genres.\textsuperscript{52} Conversely several genres may be combined in a single text which does not reflect all the contents. The *Therapeutices universalis libri septem* of Jean Fernel (1497-1558) for example contains a section on method, a pharmacopoea, curationes and consilia.

To resolve the tension between Maclean’s and Pomata’s concepts, I have turned to the categories (used here as a more neutral word than genres) found in bibliographies from Hall’s period. This avoids the potential problem of creating a personal categorisation without wider applicability, and acts as a test for Pomata’s genres. If she is correct, there should be a match between the categories in bibliographies and the titles of books.

### 1.5 EARLY MODERN BIBLIOGRAPHIES AND HALL’S BOOKS

Bibliographies of the period offer a way of examining how texts were grouped and perceived by writers who must surely have wanted their categories to be meaningful and useful to readers. Both Maclean and Pomata used the *Bibliotheca medica* of Pascal Lecoq (1567-1632) as a starting point.\textsuperscript{53} Maclean also used the two editions (1611 and 1625) of the *Bibliotheca classica* compiled by

\textsuperscript{51} Pomata, ‘Sharing Cases’, p. 204.
\textsuperscript{52} Ibid., pp. 215-216. Examples among Hall’s books include Crato, *Consiliorum et epistolarum ... liber*, Foreest, *Curationes et observationes*; and Potier, *Insignium curationum et singularum observationum*.
Georg Draud (1573-1635).\textsuperscript{54} Pomata also refers to other bibliographies, but all come from after 1650, some as late as the eighteenth century.\textsuperscript{55} Like them I start with Lecoq, but then turn to Draud as his bibliographies were published during Hall’s years of practice.

Lecoq’s bibliography contains five headings for practical texts: pharmacopoeas, practicas medendi (also referred to as therapeuticae materiae scriptores) and consilia. He added to these two single subject headings, plague and venereal disease.\textsuperscript{56} Under practicae medendi Lecoq listed authors of widely varying texts including (from Hall’s library) Bruele (\textit{Praxis medicinae}), Crato (\textit{Consiliorum et epistolarum ... libri}), Ruland the Elder (\textit{Curationum ... centuriae}) and the \textit{Observationes} of François Valleriola (1504-1580).

The section on consilia includes the \textit{consilia} of both Fernel and Reiner Solenander (1524-1601) and da Monte’s \textit{Consultationum ... centuria prima}. It did not though include Crato’s volumes of \textit{Consiliorum et epistolarum ... libri}, which were listed under practicae medendi.\textsuperscript{57} There is little sign here that books with similarly worded titles formed distinctive groups.

Georg Draud’s bibliographies of 1611 and 1625 differ considerably from Lecoq’s in their internal organisation. Instead of Lecoq’s seven general headings, both Draud’s medical sections (he also covered other fields of publishing such as theology and law)

\textsuperscript{55} Pomata, ‘Sharing Cases’, p. 194.

\textsuperscript{56} Lecoq, \textit{Bibliotheca medica}, p. 303.

\textsuperscript{57} Lecoq, \textit{Bibliotheca Medica}, pp. 450-453.
contain several hundred headings. This is in part because of 
Draud’s tendency to create a separate heading for each single topic 
book, even if it contained only one entry. He also used several 
different headings for general works on medicine, including Artes 
medicae, Medica in genere, Medendi methodi and others. 
Nonetheless, most books are listed under a small number of 
headings, and I have used these to categorise Hall’s library. 

Table 5 below lists those of Hall’s books which appear under 
Draud’s general headings. Table 6 does the same for single topic 
books. Some books are listed under more than one heading. 

The books listed under Draud’s heading of Consilia et 
consultationum medicae show the most consistent match to one of 
Pomata’s genres. It contains all Hall’s texts with either consilia or 
consultationes in the title. There is no overlap with other headings.
The Observationes heading is almost as tidy, though it includes one 
text, Potier’s *Insignium Curationum*, which by title and contents 
would fit better under either curationes or chymica.

Draud did not use curationes as a heading. The contents of his approximately similar heading of Morborum curatio show considerable variation. Amatus Lusitanus and Ruland the Elder fit comfortably enough, but Rondelet’s *Methodus* follows the practica structure and Bernard de Gordon’s medieval work is unquestionably a practica. Houllier’s *De Morbis internis* also follows the practica structure but has its own unique category, Morborum internorum curatio. Penot’s *De denario medico* is more an alchemical than a medical text. Potier’s *Pharmacopoea spagirica* would fit better under either chymica or with other pharmacopoeas.

Draud’s medicatio empirica heading contains only a few titles. Of Hall’s library, it includes the *Exhortatio ad medicum recte santeque medicari cupientem* of Benedetto Vettori (1481-1561) and Ruland the Elder’s *Curationum ... centuriae*, also listed under *Morborum curatio*. Being listed under empirica may have been a mixed blessing in terms of public image, though clearly Hall had no problem with it. Ruland the Elder felt impelled to defend his use of the word in the introduction to his first Century. His son Martin
Ruland the Younger (1569-1611) delivered a vehement defence of his father’s empiricism in the preface to the fifth.58

Practica seems to have been losing its exclusiveness as a category in Draud’s time. Draud listed only three of Hall’s authors under this heading: Gualtherus Bruele (active end sixteenth century), John of Gaddesden and Platter. Rondelet, Houllier and Bernard de Gordon (ca.1283-ca.1320) all used the practica format but were listed under Morborum curatio. Vettori’s practica-structured Exhortatio turns up under empirica.

Fourteen (almost half) of the entries in Table 5 fall under the headings of Consilia et consultationum medicae, medicatio empirica and morborum curatio (with its subset, morborum curatio internorum). This brings out the practical bent of Hall’s library as used in his manuscript. It should be noted that eleven books, more than in any other category, are listed under single topic headings. These are diverse, covering illnesses, specific patient groups, treatments and diagnostic criteria. Large numbers of such books were published and, if Hall is a typical example, were important resources for practitioners, not students only.

There are some striking absences from Hall’s library, notably of books dealing with general theory. Fernel Therapeutices universalis is the only representative of such texts in Table 5. Also absent are Disputationes, Quaestiones and similar academic texts such as commentaries. If Hall owned such books he chose not to use them in his manuscript. This is understandable as his manuscript describes patients, illnesses and remedies from a very

58 Ruland the Elder, Curationum ... centuriae, sig.A3v; pp. 397-398.
practical angle. Even his occasional borrowings relating to theory were taken from practical texts.

The evidence from this for Pomata’s epistemic categories is mixed. These patterns suggest that in the early seventeenth century the old category of consilia (sometimes linked with epistolae as consultationes) and the new one of observationes were both fairly securely defined. Curationes were much less clearly identified and overlapped more with practicae than with observationes. One possible explanation for this is that the distinctions, as Pomata draws them, were clearer for the middle of the sixteenth century compared to the end of the seventeenth. The early seventeenth century falls in the middle of Pomata’s period of study, and may have been transitional with some flux in the use and meaning of words.

1.6 COMPARISONS WITH OTHER MEDICAL LIBRARIES

How typical was Hall’s library of other medical libraries of the time? Finding an answer is complicated both by the incompleteness of Hall’s library and by the scarcity of comparators. This makes it is necessary to concentrate on books owned by Hall and found in the comparison libraries, as the only firm evidence is for books which Hall definitely owned and used. There are two reasons why he might not have used a book in his manuscript: either he owned it but did not need to use it in his composition or he did not own it at all. Thus no conclusions can be drawn from books in other libraries but not identified in Hall’s.
Maclean distinguished between real and ideal libraries, the latter being ‘a recommended reading list for students and practitioners’.\(^{59}\) I have used both real and ideal libraries here. Two real libraries are taken from Cambridge probate inventories, those for Thomas Lorkin (ca.1528-1591) and John Nidd (?-1659).\(^{60}\) Thomas Lorkin was Professor of Physic at Cambridge until his death, making his library the earliest comparator. Nidd’s, at the other extreme, was the latest. He was not a physician, but owned an extensive medical library of 126 volumes. A third real library is that of Robert Burton in Oxford, based on his own records of book purchases.\(^{61}\) He was also not a physician, and his focussed interest in melancholy might have affected his choice of reading. The final real library list is the catalogue of the Bodleian Library in 1605, with some later additions.\(^{62}\) As an institutional library, this was larger than any but exceptional personal libraries, and might be expected to contain a wider range of material.

The two final comparators are ideal library lists, compiled by Rodrigo de Castro (1560-1638) and Peter Lauremberg (1585-1639). Castro outlined his library for a ‘futurus medicus’, ‘in artis medicae limine’, in 1614.\(^{63}\) He was a firm Hippocratic-Galenist who attacked

the spread of Paracelsian chymistry across Europe.\textsuperscript{64} He recommended classical Greek, Arabic, Hebrew and Latin books before turning to the sixteenth- and seventeenth-century authors, the neoterici. Peter Lauremberg (1585-1639) was writing a few years later to suggest books for his students. He was more sympathetic to chymiatry and included a variety of newer books of this sort, including his own.\textsuperscript{65}

The comparators are not perfect. Two are probate inventories, one a list compiled by the owner, one is institutional and two are ideal libraries. Their dates span nearly seven decades, from before Hall started to practice to twenty-four years after his death. A library can only contain books published before the date at which its contents were listed. In this respect the range of dates may be advantageous, as different comparators cover different periods of Hall’s book-buying time. Lists often refer only to authors, not to book titles. Only comparisons by author are possible, so the book in Hall’s library may not be the same as that by the same author in another library. Given these limitations, any attempt at analysis would be foolish but some description is possible. Table 8 shows how references to authors are distributed across libraries.

Six authors are mentioned in four of the libraries: Bruele, Fernel, Platter, Rondelet, Valleriola and Valesco de Taranta. The reasons given (if any) are not always what one might expect. Castro recommended Fernel as a general work on medicine, while for

\textsuperscript{65} Peter Lauremberg, Laurus delphica: seu consilium quo descriptur methodus perfacilis ad medicinam (Leiden: Johannes Maire, 1621) pp. 19-44.
Lauremberg his importance was as an authority on the pulse.

Some of the names will be familiar to present-day historians, but Bruele's *Praxis* is not widely mentioned in today's scholarship, and references to Valesco de Taranta are hard to come by. The presence of three practicae - Valesco (1560), Bruele (1599) and Platter (1602-1608) - demonstrates the ongoing appeal of this style of book both for authors and readers. Among authors mentioned three times, sixteenth-century writers are commonest. Du Chesne overlapped with Hall, but the presence of Houllier, da Monte, Bernard de Gordon and Vettori shows that older texts still retained their appeal.

Table 7: Authors in Hall’s library and in other library lists

547
There is a fair degree of overlap between Hall and all the comparators, ranging from nine common authors with Lauremberg, to fifteen with Castro and nineteen with the Bodleian library. At opposite ends of the time period, there are ten matches with both Lorkin and Nidd. Overall the pattern suggests that Hall owned a fair number of books that were part of the mainstream expectation for a physician’s library, while still showing some signs of individual interests. Sennert and Ruland the Elder only appear twice and Eugalenus only once though all three authors were published early enough to have been mentioned in all the comparators.

### 1.7 WHEN DID JOHN HALL ACQUIRE HIS BOOKS?

Hall’s involvement with physic, from his matriculation at Cambridge in 1589 to his death in 1635, spanned 46 years. This was a period of change in styles of medical writing and long enough for Hall’s own interests to change and develop. Did he replace old standbys with new, add new modes of thinking to his repertoire or rely on old favourites throughout his career?
Hall’s working library at the time he was writing contained books written over eight decades, from 1550 into the 1630s. Such lengthy spans were not unusual. What Hall’s library shows is that such older books were not simply sitting on shelves waiting to be inventoried, but were regularly used even in the later years of his practice.

Many books had lengthy publishing histories so that dating an acquisition is not easy. Hall might have acquired a book any time after it was published and before his first dated use of it. The dates of acquiring mid-sixteenth-century books are most difficult to pin down. They might have been purchases from his university years, gifts from his father at that time or inherited from him in 1607. For books published later, particularly those published after 1607, Hall seems to have been using them (and therefore owning them) fairly soon after their publication. An exception to this is Eugalenus’s *De morbo scorbuto*, published in 1604 but not mentioned by Hall before a report in 1629. One must be careful not to over-interpret the evidence, but some trends are discernible and presented below.

The books in Hall’s library and first published between 1550 and 1569 are predominantly Galenic and Hippocratic in outlook. Hall’s more theoretical texts (by Fernel and Cardano – neither extensively used ) come from this period. Older examples of practicae (Valesco de Taranta, Bernard de Gordon) and consilia (da Monte, Solenander) are present, as are several authors of curationes.

---

(Amatus Lusitanus, Rondelet). Vettori’s *Exhortatio* was listed under medicatio empirica by Draud, but might be grouped with the practicae, a style popular with students. Da Monte and Rondelet represent important strands in academic teaching, from Padua and Montpellier respectively. Both are authors who would have appealed to medical students as well as practitioners. Several books from this period deal with single topics, including conception, medicinal baths, venesection, the French disease and illnesses in children. They seem to me over-specialised for a student (though Maclean includes them among books for students\(^{67}\)) and may be some of them were texts Hall inherited from his father. None of them made a major contribution to his borrowings.

Books published between 1570 and 1589 are more of a mixture. Houllier represents another important academic strand, this time from Paris, to supplement da Monte and Rondelet. Consilia are still present (Fernel) alongside curationes (Ruland the Elder, Houllier) and the new style of observationes (Valleriola, Foreest). Both Ruland the Elder and Valleriola were important sources for Hall throughout his career, so were perhaps authors whose writings he came to know well while at university.

Considering his enormous output and Hall’s evident attraction to series of publications (for example those by Ruland the Elder, Crato, Platter) it seems somewhat strange that Foreest is represented by only a single volume. Hall did use some of Foreest’s remedies for scurvy (particularly syrupus sceletyrbicus Foresti) but these were reprinted in other texts Hall owned such as Sennert’s *De*

\(^{67}\) Maclean, Logic, Signs and Nature, pp. 56-57.
There is no evidence that Foreest was an original source for Hall’s knowledge of scurvy. Ruland the Elder’s *Curationum ... centuriae* was first published as a single volume in 1577 and subsequently in ten separate volumes of a century each. The latter would have been cheaper and useful to a student as vade mecum, while the former, if Hall owned it, might have come from his father. Single topic books are again present, dealing with uroscopy, regimens of health and women’s illnesses. There is some change in the type of books, but more importantly, in their use. Both Ruland the Elder and Valleriola’s texts are books he knew well and relied on as standards throughout his working years.

The 1590s were the main period of Hall’s medical education, followed by a time probably gaining practical experience, before moving to Stratford-upon-Avon around 1607. Practicae still feature, both the traditional (John of Gaddesden, Bruele) and more recent versions (Platter). An important medical publishing event of this time must have been the series of Crato’s *Consiliorum et epistolarum ... libri*. Crato and Ruland the Elder were the sources of recipes in Hall’s earliest dated case, in 1611. Balancing Crato’s anti-Paracelsian stance are three books giving indications of Hall’s interest in chymiatric medicine (the *Dispensatorium novum* of Tobias Dornkrell (1571-1605), Croll’s *Basilica chymica* and Du Chesne’s *De priscorum philosophorum ... materia*). Two authors from this period were used frequently by Hall, Bruele and Crato. Others were used more sparingly.

The final phase of Hall’s book-buying comes with his life in Stratford-upon-Avon after 1607. The pattern is quite different from
what has come before. Almost every medical book he acquired in this period is chymiatric to some degree. Some of Hall’s new books were very definitely so: Penot’s *De denario medico* is more alchemical than medical, while works by Béguin, Potier and Johann Hartmann (1568-1631) take a strong chymiatric line. Hall was also buying books by authors already on his shelves, including new works by Du Chesne and Platter (both important sources, particularly Platter’s *Observationum ... libri tres*). Sennert became important to Hall from the mid-1620s onwards. He was published from early in the seventeenth century, but all of Hall’s borrowings come from later books.

Pharmacopoeas make up a good proportion of acquisitions. Hall might have acquired Du Chesne’s *Pharmacopoea dogmaticorum* early (it was published in 1607) and there is evidence from remedies used that he owned the 1613 edition of the *Pharmacopoea Augustana*. At some point he updated this with the *Pharmacopoeia Londinensis* (1618). His continuing interest in chymiatric matters is shown by the use of Potier’s *Pharmacopoea spagirica* (1622), even though the *Pharmacopoeia Londinensis* was supposed to have become the exclusive standard for England at that time.

Five other books require a mention, two in particular because Hall used them intensively. Ruland the Younger’s *De morbo Ungarico* was published in 1610. Hall used it in only five of his cases, but relied on it almost entirely in each of them. It was his standard work on malignant fevers, to the exclusion of other texts. The second is Gregor Horst’s *Observationum ... libri quatuor*. This was published in 1625, but despite its late date Hall used it often,
particularly as a source for treatments of scurvy. The other three are Hall’s English books, the two volumes of devotions by Donne and Adams, and Burton’s *Anatomy of Melancholy*. They are a reminder that Hall was much involved in the religious and social life of Stratford-upon-Avon. As a committed puritan member of the Church of England he almost certainly had an extensive library of religious texts as well as medical ones.\(^{68}\)

In sum, Hall’s working library was not static but grew over decades, reflecting the different stages of his working life. He started with books useful to a student and at a later in life developed new interests in chymical practice and scurvy. Among the books inherited from his father may have been a small number of theoretical texts and some unusual single topic texts, perhaps reflecting his father’s tastes rather than his own. Once settled in Stratford-upon-Avon he bought new books regularly, mainly ones that combined a practical slant with a chymical interest. In most of his practice he continued to rely on books he had known since his early education.

### 1.8 HOW DID JOHN HALL ACQUIRE HIS BOOKS?

This question is most relevant to Hall’s time in Stratford, as the earlier periods are relatively straightforward. There were bookshops in Cambridge where he was a student and books could be borrowed from colleges or staff. His father might have provided him with the beginnings of a library before or during his studies,

which would explain the presence of several books from around 1550 to 1575.

Once Hall had settled in Stratford-upon-Avon he no longer had a bookseller immediately on hand, but still bought at least twenty books between 1607 and 1635. In some cases there is evidence for him using new books soon after their publication, so he must have been able to choose, purchase, read and apply them quite rapidly. He used the *Consultationes* of Rodrigo de Fonseca (1550-1622) in the year it was published (1619) and Horst’s *Observationum ... libri quatuor* the year after its publication in 1625.

London was the centre of the English book trade and the essential link in the importation of books from Europe – the ‘Latin Trade’. From 1616 to 1627 this was supposedly a monopoly of the Stationers Guild in London.69 Most of the imported books came to London from one of the trade fairs in Germany, of which Frankfurt was the most important in Hall’s time. Book fair catalogues were published twice yearly and circulated widely. If Hall had access to these he might have been able to make specific requests based on them. Obtaining a specific book could be a complicated and frustrating process for a country gentleman, whether on personal visits to London or through a trusted intermediary.70 Pedlars and chapmen formed an extended network for booksellers to distribute their wares outside of London.71 They might have carried catalogues to tempt wealthier buyers as well as more popular literature. Stratford-upon-Avon had a regular carrier service to and

70 Scott-Warren, ‘News, Sociability, and Bookbuying’.
from London from Elizabethan times. It carried letters as well as 
other goods and might have carried books or catalogues.\textsuperscript{72}

There was another, shorter link to booksellers, perhaps more 
useful for a working physician (though there is no more supporting 
evidence for it than for a direct connexion to London). This would 
have been through booksellers in Oxford. They had a market 
among both University staff and students and with the growing 
Bodleian Library, founded in 1602.\textsuperscript{73} In 1615 the Bodleian 
Curators commissioned two London booksellers to visit every 
Frankfurt Fair and also other important outlets on the Continent.\textsuperscript{74} 
The Bodleian Committee met soon after the arrival of each Fair’s 
catalogue to decide on purchases. It would have been easier and 
more informative for Hall to visit Oxford twice a year to inspect new 
purchases at the Library and peruse the catalogues, than to travel 
to London. He could then have used the same trade links as the 
Library to order and receive any books he wanted. There is a closer 
match between the authors in Hall’s library and the Bodleian than 
with any of the other booklists shown in Table 8, which offers 
tentative support for this.

\textbf{1.9 \quad CHANGES IN HALL’S USE OF BOOKS OVER TIME}

So far this chapter has considered Hall’s library primarily as 
it was when he used it to compose the \textit{Little Book}. In the following I 
touch briefly on what evidence there is for changes in his use of

\textsuperscript{72} Alan Stewart, \textit{Shakespeare’s Letters} (Oxford: Oxford University Press, 2008) 
p. 128.
\textsuperscript{73} Levy, ‘How Information Spread among the Gentry’.
books over time. Did new books replace old or did old favourites retain their places throughout his career?

Not all of the dating evidence can be used to answer this. A minority of Hall’s consultations are datable and not all of Hall’s borrowings can be taken as contemporaneous with the original consultation. He might have used borrowings for descriptions of patients or their illnesses without having owned the source at the time of the consultation. The best dating evidence is that of the remedies, which must have been available at the time the patient consulted Hall.

Table 9 shows how different books or series of books were used in datable consultations and the periods of time over which they were used. Nine books are mentioned three times or more, Ruland the Elder’s *Curationum ... centuriae* and Platter’s *Observationes* occurring most frequently (eleven and nine times respectively). They are followed by Horst’s *Observationum ... libri quatuor* and Sennert’s *De scorbuto* each with eight appearances each.

Most of the books in this list were first published in the 1590s or later. There are relatively fewer from earlier in the sixteenth century than appeared in Tables 3 and 4. Ruland the Elder and Valleriola are exceptions to this, both having been published before 1590. Hall used them consistently from before 1620 into the 1630s. Ruland the Elder and Du Chesne both appeared in Hall’s earliest dated consultation in 1611 and remained in use by him for around twenty years. At the other extreme Horst, Sennert and Eugalenus, Hall’s main texts on scurvy, only came into use in the late 1620s, though quite intensively from then on.

This supports the evidence in Table 4 that Hall relied mainly on old favourites, using recently acquired works only occasionally. There is one possible suggestion of a fundamental change. Hall used Crato from 1613 until 1626, which was also the first year in which Hall used a remedy from Horst. Since he used Horst several times thereafter but not Crato, this may be evidence of Hall abandoning an older text in favour of something newer.

1.10 CONCLUSIONS

This chapter has used the evidence from the critical edition to explore the way in which Hall used Latin medical books both in his practice and the composition of his manuscript.
Hall’s use of borrowings from books in his library is a hitherto unnoticed phenomenon in medical manuscripts in the early seventeenth century. However, the practice was not unique to him. It should not be surprising that learned physicians, educated through the use of Latin textbooks, should use them in their daily practice. It has not though been previously demonstrated in this detail. This has implications for historians of early modern English medicine: more weight should be given to Latin texts than has been the case in the past. Any Latin text in a casebook should be considered as possibly coming from a published Latin source, even if there is no explicit reference to it. The ability to read medical Latin and an interest in it is a skill which should be encouraged among historians of medicine. There are also implications for historians interested in medical ideas. Latin texts were an important sources of practical working knowledge for the physicians of their time. Hall’s manuscript shows that they reflect practice as well as theory.

A second outcome of my analysis is to suggest that systems of creating categories, and especially Pomata’s account of epistemic genres, should be treated with care. The contents of books do not always match tidily what their titles suggest. Comparing headings in Draud’s bibliographies with Hall’s library suggests that categories were flexible. Consilia and observationes were well-defined, other categories much less so. Possibly this reflects a period of change in the early seventeenth century, and that categories in the mid-sixteenth and late seventeenth centuries were more fixed.
A third result relates to the length of time over which Hall both acquired and used his library, which is likely to apply to any other study of similar collections. His library was a dynamic creation. Its changing character over time reflects changes in Hall’s interests at different stages of his life. Libraries should not be treated as unchanging entities without internal structure, but as tools for the study of changing practice in early seventeenth-century medicine.
CHAPTER 2: JOHN HALL’S MANUSCRIPT IN THE CONTEXT OF CASEBOOKS

John Hall’s manuscript (and its published form as *Select Observations*) is commonly referred to as a casebook, and it is indeed a book and contains case reports. The earliest reference to it as a casebook is the title embossed on its British Museum cover: ‘The Casebook of Dr. John Hall’, added between its purchase in 1868 and its transfer to the British Library. But what makes it a casebook, and how is it similar to or different from other manuscripts referred to in the same way?

As long as studies in history dealt with only a single text or a handful there was little problem with this label. Increasingly though historians have been drawing on a wider range of documents and in greater numbers, so that the question of whether everything within that label is comparable has become more pressing. Fortunately many references to casebooks in general include mention of John Hall in particular, so focussing on the latter is a useful way of reviewing the former.

2.1 JOHN HALL AS SEEN BY MEDICAL PRACTITIONERS

Hall’s casebook intrigued medical practitioners long before it became of interest to historians. The earliest reference to *Select Observations* I have found in a medical journal is an anonymous piece in the *Bristol Medico-Chirurgical Journal* in 1891, reproduced the following year in *Shakespeariana*. The tone is approving, despite being written nearly 300 years after Hall practised:
His treatment was based on sound principles. Not seldom his success was obtained by the induction of copious vomiting and nearly always by very free purgation. In these days of elegant pharmacy we are in danger of forgetting the value of this mode of treatment, and we might do well to follow the example of our ancestors ... and, on their lines, secure quickly very good results.¹

Three decades later opinions had shifted. Select Observations was still seen as a practical if out-dated medical text, as well as being of historical interest. R.W. Leftwich, in 1918, thought Hall's medical practice 'very medieval, even for his time'.² Walter Lindley thought him 'not a great man', while Eli Moschcowitz described Select Observations as 'a book [...] which, medically speaking, is of no value'.³

Over succeeding decades the association of John Hall with Stratford-upon-Avon and Shakespeare continued to stimulate writing by medical practitioners, generally with more approving opinions as time has passed. He was 'not unlike his sturdy contemporary [...] Thomas Sydenham';⁴ 'a man of character and

originality ... admired by his colleagues’;\(^5\) one who preferred ‘the acceptance of new ideas rather than adherence to the old dogma’.\(^6\) This fascination has continued into the twenty-first century, with the assessment of his medical practice tending to become more balanced over time.\(^7\) Nearly all these authors refer to John Hall as ‘Dr’ Hall, though he never received a doctorate nor claimed to have one in his lifetime.\(^8\)

Two publications from the 1970s and 1980s discuss specific aspects of Hall’s practice, both being based on Select Observations. Basil Clarke described how Hall treated patients with mental disorders, using the term quite widely to include the mother (an illness caused by movement of the womb, associated with mental problems, falling sickness, some aspects of scurvy, frenzy and melancholy).\(^9\) Kenneth Carpenter’s study of scurvy used Hall to illustrate the therapeutic approaches available to a practitioner of

---

\(^8\) Wells, ‘John Hall’, p. 86.
\(^9\) Basil Clarke, Mental Disorder in Earlier Britain: Exploratory Studies (Cardiff: University of Wales Press, 1975) pp. 282-285. See also Appendix D for a definition.
Both these texts might seem at first sight to be examples of the older school of medical history (medical practitioners writing about medical practitioners and concentrating on evidence of progress) but neither really fits that description. Both describe the illnesses they discuss in the terms of Hall’s period, with no attempt at retrospective diagnosis. Both are dispassionate in their descriptions, using Hall illustratively without any suggestion that he was either amusingly old-fashioned or excitingly forward-looking. The way they approached Hall would not have looked out of place in the new school of social history of medicine (as practised by academic historians with wider interests than medical progress) though neither author shows any signs of being influenced directly by that thinking. By contrast, an article in a history journal in 1970, examining emotional disorders among Hall’s cases, put retrospective diagnosis at its centre: ‘The symptomatology of emotional illness as displayed by Dr Hall’s patients [...] clearly follows the pattern of symptoms seen today’ and looks back to the previous model of the history of medicine.  

2.2 CASEBOOKS AND JOHN HALL IN THE HISTORY OF MEDICINE

Casebooks appeared in the history of medicine at a later date than in medical journals and are mentioned rarely before the 1980s. The term was used initially to describe new editions of manuscripts or

---

books. Poynter and Bishop used it in 1951 for one of John Symcotts’s documents, to distinguish it from his letters and commonplace book.\textsuperscript{12} Harriet Joseph used it without comment in her facsimile editions of \textit{Select Observations}, making no distinction between Hall’s manuscript and the published book.\textsuperscript{13} Joan Lane’s edition of \textit{Select Observations} was published in 1996 but in many ways its style and content has more in common with these texts and the early interests of the social history of medicine than with the cultural history which was more dominant at the time she published. Her aim was to identify and fill out the lives of each of Hall’s patients, including their family connexions, treating aspects of his medical practice as a subsidiary issue.\textsuperscript{14} Dewhurst described Thomas Willis’s manuscript as a casebook, but did point out that it had no title originally, and that Willis later in his career referred to his records as ‘diaries of diseases’.\textsuperscript{15} Neither Joseph nor Dewhurst were medical historians: Joseph was a Shakespeare scholar, and Dewhurst a psychiatrist which led him to some rather strange retrospective diagnoses. Their texts though have been much used by historians of medicine since then.

MacDonald’s study of mental illness, through the lens of Richard Napier’s astrological records, was also published in 1981.\textsuperscript{16} Roy Porter referred approvingly to MacDonald’s work in his call for ‘medical history from below’ which was to set a pattern for much

\begin{flushleft}
\textsuperscript{12} Poynter and W.J. Bishop, \textit{John Symcotts}.
\textsuperscript{13} Joseph, \textit{Shakespeare’s Son-in-law}.
\textsuperscript{14} Joan Lane, \textit{John Hall}.
\textsuperscript{15} Dewhurst, \textit{Willis’s Oxford Casebook}, p. 61.
\textsuperscript{16} MacDonald, \textit{Mystical Bedlam}.
\end{flushleft}
work in the social history of medicine.\textsuperscript{17} MacDonald’s text is more transitional than is often recognised. It does not mention the social history of medicine at all and makes no overt criticism of previous styles of studying history. MacDonald’s main influences were from figures eminent in other branches of history, Michel Foucault, Keith Thomas and Lawrence Stone.\textsuperscript{18}

Robert Sawyers’s more wide-ranging study of Napier’s cases followed in 1986. This was more polemic in its justification for a new way of doing history (‘I seek to remedy some of the deficiencies of earlier histories of medicine’) and turned to the social sciences and anthropology in order to find new tools for historical research.\textsuperscript{19} In this it is part of the cultural history approach which was gaining popularity at that time. Both MacDonald and Sawyer referred to Napier’s records as casebooks without qualification or definition. Both used a small number of similar documents, including \textit{Select Observations} and Symcotts’s casebook, for comparisons.

Two important works by cultural historians of medicine followed soon after, by Beier and Nagy. Beier’s \textit{Sufferers and Healers} (1987) drew on a variety of sources including casebooks, with the focus now on ‘the experience of ill health’ and ‘the choices of seventeenth-century patients’. She studied the modes of practice of more main-stream practitioners than Napier, but avoided leading figures such as Court and London physicians. Her choices included a London surgeon, Joseph Binns, John Symcotts, Dr Barker of Shrewsbury and an anonymous practitioner from

\begin{footnotesize}
\begin{enumerate}
\item MacDonald, \textit{Mystical Bedlam}, pp. xiii-xiv.
\item Sawyer, ‘Patients, Healers and Disease’, p. 3.
\end{enumerate}
\end{footnotesize}
Cambridge. It is a sign of the new approach that she used the original manuscripts for all these sources except Symcotts.\(^{20}\) Equally significant is that the majority of her sources are letters and diaries giving the experience of illness from the sufferer’s point of view.

Nagy’s *Popular Medicine in Seventeenth-Century England* was published in 1988.\(^{21}\) Her sources for professional practice include John Hall (via *Select Observations*), John Symcotts and an unknown Yorkshire practitioner’s accounts.\(^{22}\) This last contains a small amount of clinical and personal information, but its main purpose was to list the physician’s fees from each patient. Nagy did not refer to any of these sources as casebooks, preferring instead to describe them as ‘records’ or ‘notes’.

These studies all used *Select Observations* along with other sources to argue a particular case, but it has been put to other uses. Ease of access via the facsimile editions allied to the wide range of illnesses Hall recorded has made *Select Observations* useful as a source of illustrative examples. Andrew Wear for example used John Hall’s treatment of Joan Lynes for tympany to illustrate a successful cure even though bystanders thought her incurable.\(^{23}\) There are many other examples of such illustrative uses in a wide variety of texts.\(^{24}\)

\(^{22}\) Ibid., pp. 43-53.

Alongside the changing nature of references to casebooks has been a steady increase in the number being identified and used. John Raach in 1943 knew of only five from between 1600 and 1635, one of them being *Select Observations* and another Richard Napier’s.²⁵ Lane in 1996 still only mentioned three (Mayerne, Napier and Symcotts) besides Hall.²⁶ Nagy and Beier respectively used three and five casebooks (along with other material) in their research.²⁷ MacDonald remarked in *Mystical Bedlam* that he had examined ‘some’ casebook manuscripts in the British Library, but gave no references.²⁸

An early example of casting a wider net is Katherine Williams’s study of hysteria a few years later, for which she used fifteen casebooks.²⁹ More recently, Wendy Churchill used around forty casebooks in original manuscripts, for her study of women’s health between 1590 and 1740.³⁰ Lauren Kassell has identified eleven astrological and thirty-six medical casebooks meeting her definition and written prior to 1700.³¹ Even allowing for the relatively longer timescales of these latter studies this is a
remarkable jump, which owes much to the development of online searchable catalogues and databases. This development, clearly excellent in itself, has brought with it the question that earlier authors felt no need to confront: what exactly is a casebook?

2.3 DESCRIBING AND DEFINING CASEBOOKS

Churchill and Kassell have attempted in different ways to say what is, or is not, a casebook. Churchill adopted a comparative and semi-quantitative approach, while Kassell treats casebooks more analytically as ‘artefacts of the medical encounter’. Their analyses are complementary and together provide a good basis for a consideration of Hall’s manuscript.

2.3.1 Wendy Churchill and Casebook Contents

Churchill’s study refers to many unpublished manuscripts which no one else has so far used, making the point that such texts are becoming easier to access with on-line databases and digitisation. She gives no definition of casebooks, but makes a clear distinction between them and other practitioner manuscripts such as accounts, correspondence and published books.

Her description of casebooks starts with consideration of their style, organisation and purpose. They might be written in Latin or English or a mixture, a point also made by Kassell. Most, Churchill observes, are only roughly chronological, often with evidence of information being inserted at later dates than the first

32 Ibid., p. 595.
consultation with a patient.\textsuperscript{35} She points out that casebooks cover
time-spans from months to years, with consultations not
necessarily evenly spaced, and that only a minority were dated.\textsuperscript{36}
Some records were kept on loose sheets of paper which were
subsequently bound, so the chronological order is uncertain.
Others show clear signs of editing and reorganisation, though
usually ‘there is no apparent underlying pattern or rationale (aside
from chronology)’ for the selection.\textsuperscript{37} Most practitioners did not
overtly state why they kept casebooks, so suggestions for reasons
can only be interpretations from the texts. Potential publication,
self-reflection and learning are possibilities. In this respect, Nance
has put forward other suggestions in relation to Turquet de
Mayerne: they may serve as a method of deliberation, a record of
past treatment, endorsement of a philosophy and as a defence of
controversial therapies.\textsuperscript{38}

Churchill has analysed the patient information in casebooks
in more detail than has previously been done.\textsuperscript{39} Variables she
considers are age and sex, marital and socio-economic status, race,
religion and geography. Sex is the variable most frequently present
in the casebooks she examined, though rarely recorded in its own
right. It is most often inferred from gendered titles or references to
the patients’ relationship, such as wife or daughter, to someone
else. It was commonly not recorded for pre-adolescent children.
Most casebooks contain a majority of female patients, usually

\textsuperscript{35} Ibid., \textit{Female Patients}, p. 17.
\textsuperscript{36} Ibid., p. 19.
\textsuperscript{37} Ibid, p. 21.

between fifty and sixty per cent. Exceptions are casebooks associated with practitioners working in Cambridge and Oxford with their large male academic population base, at the Court in London and for some surgeons in London. Age is recorded less often than sex, often only approximately, and usually more precisely for children than adults.41 Children and elderly people appear less often in casebooks than do those of ages in between. Perhaps this was because of a general belief that medical treatments were more dangerous for these ages, or that medical treatment was less likely to be successful for these patients.42

Churchill finds social titles unhelpful as indicators of marital status, mainly because the meaning of Mrs as a title was undergoing changes in the seventeenth century.43 She also found titles as a whole imprecise as socio-economic indicators. For her analyses, she used two groups, ‘lower social orders’ and ‘others’, which included all ranks from the professions (in towns) and yeomanry (in the country) and upwards.44 The poorest members of society are rarely found in casebooks and must be under-represented relative to the population.45

Religion is hardly referred to in any casebooks other than Hall’s, as Churchill notes.46 Race is important for her study as she included practitioners working in the British West Indies. Place of residence was recorded for a minority of patients. The information

shows that a practitioner’s patients were often drawn from a wide area, but it is less clear whether they were commonly seen at the practitioner’s offices or visited at home.\textsuperscript{47}

\subsection*{2.3.2 Lauren Kassell’s Definition and Descriptions}

Kassell takes Churchill’s descriptions of the contents of casebooks a step further by attempting to define them. Her need to understand casebooks grew out of a desire to ‘assess the representativeness of Forman’s and Napier’s records’.\textsuperscript{48} Her work on this is essential to understanding both what a casebook is, and how much difference there may be between one casebook and another. Her key definition is that casebooks are ‘serial records of practice’. This is amplified as ‘a body of manuscripts that record a series of consultations’ but are not ‘uniform in mode of production, content, or epistemology’.\textsuperscript{49} They had ‘a common purpose: to document medical encounters’.\textsuperscript{50} Casebooks are also ‘a variety of records of practice, mostly generated by literate men, unpolished, not for the ready use of an intended reader’.\textsuperscript{51} Medical and astrological casebooks are distinct, because the latter are essential to the process of casting and analysing a horoscope, whereas medical ones were purely a record.\textsuperscript{52}

Within her definition, Kassell separates the ‘first record of practice’, ‘written during, or shortly after, a medical consultation’, from collections made later, which might be organised in various

\textsuperscript{49} Ibid., p. 600. \\
\textsuperscript{50} Ibid., p. 596. \\
\textsuperscript{51} Ibid., p. 597. \\
\textsuperscript{52} Ibid., pp. 608-609.
\end{flushleft}
ways. Casebooks might be modelled on ‘diaries, registers and testimonials’. The most obvious of these is diaries, though ‘modelled on’ is perhaps inappropriate. For Willis and Mayerne, their primary casebooks simply were diaries. Registers were a second model, though Kassell notes that there is little evidence for this. Kassell suggest testimonials as another model, referring to ‘Italian cure testimonials’ or the advertisements of ‘folk healers’.

Excluded from the definition of casebooks are: collections of medical information mixing consultation details with other medical information (though it is hard to find a better description of John Symcotton’s writing, which Kassell accepts as a casebook); commonplace books with information organised under headings; recipe collections, ‘though the prescription books on which they are based might be included’. Her ultimate conclusion is that ‘the processes of producing the records – from jotted notes to printed observations – are as important to the history of medicine as the final product’.

Kassell also proposes a checklist for analysing medical casebooks, starting with production, then retention and reuse, and finally collection and printing. It moves on to the learning of the author; page format and layout; record order; rough or fair copy; and again retention and reuse. Finally, printing moves a casebook

56 Ibid., p. 608
57 Ibid., p. 624.
on to ‘the creation of the medical record as a class of historical
documents’. Kassell’s discussion makes an excellent beginning, though
there are problems with it. There is a degree of circularity in the
reasoning, with a definition based on examining casebooks (and
other material), being applied to define the casebooks used to create
the definition. The multiple statements about casebooks are not
entirely consistent, in that a text may sometimes seem fall within
the compass of one but not another. Commonplace books, medical
curiosities and recipe collections are excluded in one place, but
appear to be included in another. Printed documents are included
in Kassell’s list of casebooks, even though the statement about
historical documents above seems to exclude them. I suggest that
what Kassell has produced is better regarded as a series of
expanding descriptions than as a firm definition. This is a useful
approach if the intention is to create a broad pond in which to fish.

2.4 JOHN HALL’S MANUSCRIPT CONSIDERED AS A
CASEBOOK

Taken together, Churchill and Kassell’s work creates a framework
within which Hall’s manuscript can be examined and answers
attempted. There is sufficient overlap between them that their
frameworks can be used together. Kassell provides a structure of
key words into which Churchill’s comparative material can be
slotted. Using this structure, I shall look at Hall’s manuscript:

a) as the documentation of medical encounters (its purpose);

Ibid., p. 615.

b) as a serial record of practice (its chronologies);

c) as it is modelled on other writing (its sources);

d) as part of a process (its relationships to other documents, via
   reorganisation, editing and rewriting).

Kassell also included consideration of casebooks as artefact, their
physical existence, but this has already been covered in the
Background so is not repeated here.

2.4.1 The Purposes of the Manuscript

Kassell states that the common purpose of casebooks is to
‘document medical encounters’. Each word in that phrase
contributes something important for my analysis.

‘Encounters’ indicates that at least two people are involved.
It is not part of Kassell’s definition, but she does state that the
encounters are ‘between medical practitioners and their patients’.60
I take this to mean that the records should, at least in a proportion
of cases within each casebook, give enough information to identify
the two people involved. Practitioners may be identified by name, or
be anonymous or only uncertainly identified. Not all documents
recording encounters are necessarily included as casebooks. By
convention, records of treatment by lay people are excluded from
casebooks even though they may document encounters in the same
way. In Hall’s case, the contents and history of his manuscript
confirm his authorship though he is not named in it. Turning to his
patients, nearly all are identified by name. Those who are not can
mostly be identified by their connexion to another person, as for

60 Kassell, ‘Casebooks’, p. 596.
instance Nash’s servant at the Bear Inn (Case 6) or the Reverence Hollyoak’s son (Case 159).

Kassell further specifies that the encounters are ‘medical’, so medical content is an important if not essential element. A complete medical encounter, in my judgement, has three components: a complaint, a treatment and a conclusion. The first two are essential. There may be more than one of each of the components if the encounter is long and complex. Thus while account books identify patients (as, to be useful, they have to) they were not primarily kept for a medical purpose even if medical information is included. Similarly, records of pharmaceutical prescriptions for identifiable patients may possibly be useable as casebooks, though they have limited value in the absence of information on the complaint and/or outcome. Hall’s case reports do in every case provide all the three components, though the length varies considerably. The two shortest reports are only three and four lines long (John Emes, Case 13; Michael Drayton, Case 22) while the longest two run to over one hundred lines (Elizabeth Hall, Case 36; Mrs Fiennes, Case 167).

The third of Kassell’s words considered here is documentation: that is, that casebooks should contain information about the patients. Churchill’s quantitative analysis is useful here in giving a guide as to what information one might or might not expect to find in them.

Sex is the most commonly identified personal characteristic in casebooks, and in Hall’s manuscript is identifiable for all patients. This is in some measure due to Hall’s use of Latin, which
means that gender can be identified from verb and pronoun endings in the absence of other information. Age was less frequently recorded. Hall recorded the ages of 57 of 184 patients (31 per cent), which Lane raised to 120 (65 per cent) by calculating it from combinations of other information. The percentages are similar for men and women. Hall’s ages are often approximate, but follow the general pattern of being more accurately stated for children. As in casebooks generally, there are relatively small numbers of reports relating to children and elderly patients.

The benefits of Lane’s painstaking investigation into patient identities is clear from the additional information on age which it has supplied, as noted above. Her detailed analysis of individual patients may seem to belong to an outdated methodology and interest, but the results demonstrate how much extra information could potentially be gained if her studies were applied to other casebooks.

Churchill showed that most casebooks, including Hall’s, had a small majority of female over male patients. This has been commented on elsewhere, but never put in a context of other time periods. Evidence from the NHS in the twentieth century shows a consistent and unexplained excess of female over male patient consultations. The male/female ratios seen in early modern casebooks may owe as much to long-term trends in gendered

---

61 Lane, John Hall, pp. xviii-xx.
62 Ibid., p. xviii.
differences of attitude to health care as to selection by the writers of casebooks.\textsuperscript{63}

I agree with Churchill in not treating marital status as an important variable, mainly because of the absence of useful comparators. Socio-economic status is a more important variable. Churchill states that ‘socio-economic status in early modern medical documents is frequently imprecise’,\textsuperscript{64} While this is sometimes true, the converse may be more of a problem. Hall had a much wider range of social indicators to draw on than we do now, and the problem is in part due to our lack of equivalents for the more minutely divided social scale of the seventeenth century. Hall’s manuscript is similar to others in having a small number of clearly specified high-ranking patients (led by the Earl and Countess of Northampton) and an equally small number of the low-ranking, for instance the anonymous serving maid at the Bear Inn (Case 6) and the poor man, Hudson (Case 91). In between the extremes is a significant division which is concealed by Churchill’s creation of two broad bands. This relates to the distinction between patients entitled \textit{Generosus/-a} and \textit{Magister/-ra}. Both might now be translated as Mr and Mrs (as Cooke did in \textit{Select Observations}) but this is to blur a social distinction still important in the early seventeenth century.

\textsuperscript{64} Churchill, \textit{Female Patients}, p. 29.
Ninety-one patients, almost half of Hall’s total, were given one of these titles (fifty-eight Generosus/-a, thirty-three Magister/-ra). In forty-three the titles are associated with a place name, and it is this which points up the distinction.\textsuperscript{65} Thirty out of thirty-four combinations of Generosus/-a and a place name refer to patients in small towns, villages or estates outside Stratford-upon-Avon, while seven out of nine associations of Magister/-ra or relate to inhabitants of Stratford-upon-Avon. Hall used Generosus/-a primarily when he was referring to the county gentry – those entitled to bear arms but more importantly able to ‘live idly off the rents of their landed estates’.\textsuperscript{66} Hall’s association of the gentry titles with the place names of their estates (and Lane’s careful work on identifying them) makes it clear that this definition still held good at his time. A gentlewoman or gentleman was associated with land and identified by that association.

Stratford-upon-Avon citizens entitled Magister/-ra were part of a different important social bloc - the ‘eminent persons’ or ‘chief inhabitants’ of parishes, wealthier than the general run of inhabitants, often the holders of local offices in the church and civil authorities.\textsuperscript{67} Their status was measured against the local population only, rather than any wider group, as was the case with the gentry. This local status is born out by what is known of Hall’s patients or their relatives. Three of them were clergymen – Mr

\textsuperscript{65} The next commonest titles Hall used were Eques for men (knights and knight baronets) and Domina (Lady) for their wives (five and eighteen in number, respectively).

\textsuperscript{66} Peter Earle. \textit{The Making of the English Middle Class} (London: Methuen, 1989) pp. 5-6.

Rogers (Case 72, Vicar of Holy Trinity Church 1606-1619), Mr Wilson (Case 4, Vicar 1619-1638) and John Trapp (Case 177, Curate and Schoolmaster). Three women (Mrs Smith, Case 3; Mrs Chandler, Cases 8 and 24; Mrs Baker (Case 127) were the wives of Aldermen to whom can be added Alderman Tyler (Case 140) and Alderman Smith, father of an unnamed daughter (Case 158). Some Stratford-upon-Avon citizens also had gentry status. Mrs Combe (Case 140) of the influential Combe family, Anne Greene (Case 65) daughter of the Town Steward and Hall’s own wife Susanna were all recorded as gentlewomen. This social distinction is an important one and subsuming it into more general categories risks losing information on the social mix of patients across towns and counties.

Race does not appear in Hall at all, but religion, though of little importance in most of Churchill’s sources, was certainly so to Hall. His references to six patients (including one priest) as Roman Catholic were used to boost his reputation in the introduction to the first edition of *Select Observations*. Less remarked on is how Hall characterised patients who shared his Puritan approach to life. The link between piety and ‘Godliness’ in the self-identification of Puritans is strong. Hall described twelve of his female patients as pious and devout (pia, religiosa). Five of them, according to Lane,

---

68 John Bird, ‘To the Judicious Reader’, in *Select Observations*, 1st edn, Sig. A5v: ‘I take this to be a great signe of his ability, that [...] such as hated him for his religion, often made use of him’
70 Countess of Northampton, Case 1; Mrs Smith, Case 3; Mrs Harvey, gentlewoman, Case 60; Lady Beaufou, Case 73; Lady Rous, Case 75; Lady Jenkinson, Case 120; Anne Ward, Case 146; Mrs Fiennes, gentlewoman, Case 147; Mrs Jackson, gentlewoman (minister’s wife), Case 149; Mrs Vernon,
showed personal or family leanings towards Puritanism but gives no
information on the others. This suggests that for Hall, pia and
religiosa were characteristics of Puritan women of high social class
and ministers’ wives, though he gave few examples of behaviour to
justify the descriptions. Lady Rainsford (Case 163) was ‘well-
deserving of everyone’ and ‘most devoted to reading the Holy
Scriptures’. She, the Countess of Northampton and Mrs Harvey
were all ‘modest’. Puritan men were described rather differently.
The Stratford-upon-Avon curate John Trapp (Case 177) was noted
for ‘manifest piety and learning’, while another cleric, Thomas
Fawcett (Case 145) was ‘distinguished for his learning’. Evidently
religion was expressed in very different ways in men and women.

2.4.2 Chronologies and Series

In this section I shall be using the words chronologies and series in
a somewhat technical sense from my years as an epidemiologist.
They, and my use of them in what follows, need an explanation.
The Oxford Dictionary of English defines a series as ‘a number of
events ... of a similar or related kind coming one after another’, and
chronology as ‘the arrangement of events or dates in the order of
their occurrence’. This makes clear that a chronology is a special
sort of series, based in events coming one after another in date
order. Other sorts of series may be based on other orders – for

__________________________
gentlewoman, (minister’s wife), Case 154) Lady Rainsford, Case 163; Mrs
Wilson, gentlewoman (probably a minister’s wife), Case 171;

Ward); p. 281 (Frances Fiennes, Gentlewoman); p. 335 (Anne Wilson,
Gentlewoman).
example the head to foot order of entries in a *practica* textbook is organised in an anatomical series.\textsuperscript{72}

In casebooks, there are both chronologies and non-chronological series to consider. Underlying the casebook itself will be the order in which patient consultations originally occurred. This is a chronology but it is one to which we often do not have direct access. In a primary casebook, that is, one recorded at or very close to the date of consultation itself, the casebook order will reflect the consultation chronology very closely. Even so, there is not necessarily an exact match. In a lengthy illness there may be several consultations with second and subsequent consultation notes either appended to the first consultation or as a separate entry.\textsuperscript{73} Conversely in secondary casebooks, meaning those based on a primary casebook but composed some time later (as is the case with Hall’s) there need be no direct match between the order of the dates of consultations and the order of their casebook records. Other factors such as geography, patient details or types of illness may have been used instead of consultation chronology to organise the manuscript.

In my analysis of Hall’s manuscript which follows I use ‘series’ to refer to the order in which the case reports it contains were recorded by Hall. It seems more likely that he had some idea of how he wished to proceed (or different ideas at different stages of the composition) than that he picked cases entirely at random. We

\textsuperscript{73} Dewhurst, *Willis’s Oxford Casebook*: Robert Wyld was seen by Willis on 10 Jan. 1650 and again on 10 Sep. 1650 for a continuation of his illness, but given a separate record: pp. 67-79.
have only the internal evidence of the casebook itself as a guide and can make no initial assumptions as to what those ideas were. Underlying that series are two chronologies which need to be carefully distinguished.

The first chronology refers to the underlying order of the consultation dates. Once again the only available evidence is in Hall’s manuscript itself. In some cases Hall recorded an exact or approximate date of the consultation or series of consultations. For others, a date of consultation, at least to the nearest year, may be calculable from patient information. This is the approach Joan Lane adopted. Once she had identified a patient from information Hall provided (such as name, age and sex, place of residence or occupation) she was often able to find a date of birth or baptism for the patient. From this and the patient’s age at consultation a year of consultation can be calculated. Alternatively, when Hall had recorded a date of consultation, Lane could calculate the patient’s age by combining that with the date of birth or baptism.

The second chronology is that of the recording of case reports in Hall’s manuscript. Dates of recording are even rarer than dates of consultation in casebooks (Symcott’s casebook is a rare exception to this). Nonetheless, combining the order reports were written in and their consultation dates (where known) does provide some information. The crucial fact here is that the report of a consultation in a casebook most have occurred after the date of the consultation on which it was based. If a hypothetical consultation was for example dated to 1620, the actual recording of it in a casebook must have been in 1620 or later. It cannot have been
written into the casebook the previous year. Further, the date of one consultation has implications for the recording of all subsequent records. If the hypothetical consultation was recorded in 1620 or later, that applies too to all subsequent case reports regardless of when the consultation took place. This chronology of course can only be applied if there is evidence, as there is for Hall’s manuscript, that it was composed without gaps from beginning to end. If there is evidence for gaps having been left in a casebook and subsequently filled in, this reasoning cannot be applied without further investigation.

Having set out the reasoning behind the analysis of chronologies and series, it can now be applied to the information in Hall’s manuscript.

The earliest chronological consultation in Hall’s manuscript is that of Elizabeth Boughton (Case 69) dated by Lane to 1611.74 This is just four years after Hall is first known to have been in Stratford-upon-Avon. The latest is John Trapp (Case 177) dated by Hall to 11 March 1635, six months before his death, and demonstrating that he was still working then. The manuscript therefore contains reports of consultations spanning nearly his whole working life. The first report (Case 1) in Hall’s manuscript (therefore the first in the manuscript series) is a consultation with the Countess of Northampton. He gave the date of the consultation as 6 March 1622. All the other reports must have been written after that date, even if the consultation (as with Elizabeth Boughton) was earlier. A tighter fix on the chronology of the manuscript’s

74 Lane, John Hall, p. 131.
composition is given by Ann Smith’s consultation (Case 3) which by Lane’s calculation is dated to 1634. All subsequent reports from Case 4 onwards must have written in 1634 or 1635, whatever the dates of the consultations. This gives a very tight time scale for Hall’s final composition of the manuscript.

It is possible to analyse the chronologies of the consultations and composition of the casebook in more detail, by looking at the dates and order of reports. Chart 1 shows the relationship between the series of reports in Hall’s manuscript and of all the consultations for which he gave dates. The dotted line across the chart shows the median year of dated consultations – that is, the year which falls in the middle of all the dates.

At first sight there appears to be a fairly simple relationship. All the dated consultations up to Case 107 fall on or below the median, while all those after it are above. This suggests that Hall started by writing up his earlier cases before moving on to later ones. However

---

75 Ibid., p. 9.
there are only three dated consultations in the first sixty reports and they are all earlier than the next eleven. This leaves considerable gaps in any postulated chronology.

Fortunately the additional information from the consultations for which Lane calculated dates is available and these are added in Chart 2. I have used only years which could be calculated exactly, not those which are only approximate. The additional consultation years have a wider scatter, but broadly confirm the pattern in Chart 1, while filling in some of its gaps. The chart shows a wide scatter initially, with most consultations dated after 1620. This is followed by a period in which all the dates precede 1625. Then there is a rising trend towards the end of the series.

![Chart 2](chart2.png)

The run of dates all falling before 1625 comes between cases 50 and 100. Centuries of one hundred cases were a common way in which authors organised their texts. Ruland the Elder, an author particularly important to Hall as Chapter 1 showed, divided all his
case reports into ten centuries. The half century point around Case 50 may also have been meaningful to Hall. He changed his style of case headings from patient to illness centred at case 47. Using these pointers, I have subdivided the information in Chart 2 into half-centuries (the final one being incomplete).

This is shown in Chart 3 and brings out a clearer pattern. The first half-century contains a wide span of consultations from 1619 to 1634 around a median of 1624, with no clear concentration of dates. This suggests that the date of consultation was not important to Hall at this stage of writing. The second half-century has a similar time span, but all the consultations in it are dated before 1625. Most are concentrated between 1615 and 1620, and the median is 1617. This looks as if Hall chose to concentrate on a particular set of dated records at this point in his composition.

In the third half-century all the dates are after 1620, the time span narrower and the median, 1629, is later. The final incomplete half-century has the narrowest range: all the cases except one are dated

![Chart 3. Consultations dated by Hall and Lane (modified by Wells) in Manuscript Order, with Median Years of Consultation for Half-centuries](chart.png)
between 1632 and 1635 with a median of 1633. This coincides with
the period when Hall was actively writing his manuscript and
suggests that he was concentrating on recent consultations and
recording them almost as they occurred.

This sub-division of cases also relates to changes in Hall’s
style of composition. The reports in the first half century occupy on
average one page per case. In the second half-century the average
drops to two-thirds of a page, before rising in the last two half-
centuries to about one and quarter pages per report. This probably
reflects Hall’s dependence on old consultation notes for the period
before 1625, compared to those he was making in parallel with
composing the manuscript. The reports in the final half-century
come close to being a series of primary reports, though with Hall’s
added social comments.

This chronology provides a framework for considering other
series, by which I mean consecutive runs of reports with some
common thread other than timing, such as geography or illness. As
in most casebooks, there is little evidence for this model of
organisation. The most obvious series, or rather two overlapping
series, occurs right at the beginning. The first two consultations
were with the Countess and Earl of Northampton, both placed in
Ludlow. The Countess had an eye problem and three similar
illnesses were recorded soon after (Cases 3, 4 and 7). The last of
these was for another patient in Ludlow. The report on Case 3 is
dated to 1634, so it would have been fresh in Hall’s mind as he
wrote and perhaps reminded him of similar problems. If so, he did
not persevere with this approach to organisation.
The lack of identifiable series does not mean that there is no structure to Hall’s manuscript. An alternative way of looking at the arrangement of case reports is to consider irregularities in the way they are organised. An example of these is the distribution of Hall’s reports referring to scurvy, which are markedly skewed (Chart 4). There are two short concentrated series: Cases 103 to 106 all refer to scurvy, as do seven out of nine from Cases 162 to 171. More important is the larger scale imbalance, with twenty-four out of twenty-six reports being found in the last two half-centuries. For comparison, the chart also shows the distribution of cases of uterine complaints (red and white fluxes and the mother), which are much more evenly spread.

![Chart 4. Consultations for Scurvy and Uterine Complaints in Manuscript Order, with Half-century Divisions](chart.png)

Even though only a few of the reports of scurvy have consultation dates, the distribution gives a guide to their timing. There are no reports mentioning scurvy in the second half-century, which probably contained consultations all dated before 1625. Reports mentioning scurvy in the third half-century are most likely datable to 1625 or later. Those in the fourth are probably datable to 1630 or later. The two reports of scurvy in the first half-century
are dated to 1622 (Case 1, Countess of Northampton) and 1634 (Case 47, Mrs Wagstaffe). Hall’s treatment of the Countess contains no mention of the specialist literature he referred to frequently in subsequent reports. The pattern strongly suggests that Hall’s interest in scurvy started somewhere between 1620 and 1625 (perhaps initiated by the illness of the Countess described in the first case report) and reached a peak after 1630.

Discussions of casebooks tends to treat them as unitary records with little variation over time. Hall’s reports of scurvy provide evidence that a casebook can vary internally and that the variation can be identified. This must reflect the changing interests of the author, either during the consultations, or the process of composition or both. It suggests that comparisons within a single casebook may be as informative as comparisons between different ones.

### 2.4.3 Models for Casebooks

Kassell put forward three different models (or analogues) for casebooks: diaries, registers and testimonials.\(^76\) Hall’s model though is Ruland’s the Elder’s *Curationum*, part of the Latin learned, not the popular vernacular literature. This is a far cry from Kassell’s suggestion that testimonial models were drawn from ‘folk healers’ and ‘Italian cure testimonials’.\(^77\) So far the argument for Ruland as Hall’s model has rested primarily on the similarity between the texts’ titles, but it goes deeper.

---

\(^{76}\) Kassell, ‘Casebooks’, p. 607.

\(^{77}\) Ibid., p. 609.
Figures 3 and 4 in Chapter 1 showed that four texts based on real patient-practitioner interactions were among those Hall used most frequently. Besides Ruland the Elder, he turned most often to works by Valleriola, Platter and Horst, all with titles identifying them as *Observationes*. Comparing them helps to bring out why Ruland appealed most to Hall as a model.

Ruland organised his reports into ten centuries of one hundred cases each. Apart from the division into centuries, there is no other apparent structure in terms of chronology or series of illnesses. The large number was partly possible because each report is relatively short, usually under a page long and rarely reaching two pages. This is related to Ruland’s almost complete avoidance of theory or reference to other authorities – an expression of his emphasis on empiricism.

Each report starts with a short heading, usually a two to four words summary of the illness. The first paragraph gives details of the patient, usually name, age, occupation and often relationships if the patient were a woman, a child or a servant. There is very little about the patient-practitioner interactions and descriptions of patients are usually brief. Ruland then turned directly to therapies. Each is listed under one word sub-headings – potus, gargarismus or purgatio for example. There are rarely more than three or four such remedies in each case report and suggestions that the initial therapies were unsuccessful and needed repeating or changing are uncommon. The same arrangement of one-word subheadings for therapies occurs often but not consistently in Hall. Hall differs in giving more extensive medical histories with repeated or different
therapies if the illness changed or the patient did not respond. The concluding paragraphs in Hall and Ruland show close similarities. Both Ruland and Hall (often borrowing from Ruland) frequently finished with a statement that the patient was freed of illness or cured, associated with thanks to God as the ultimate source of healing.

The Observationes used by Hall are all structured differently. Valleriola’s come in six books of ten reports each, not grouped by illnesses. Platter’s text is divided into three books matching his three-volume series, Praxeos, and subdivided further into related illnesses like a practica. Horst split his book both by clinical condition and anatomically, into fevers and illnesses of the head, chest and abdomen. The reports in all three are considerably longer than in Ruland, due primarily to the amount of theory included in the text. Valleriola’s reports are the longest. They are the only ones which have marginal references to authorities – biblical and classical as well as medical. Horst often but unsystematically added marginal subheadings to structure the theory elements of his reports, referring to signa, causa, prognosis and similar. Platter tended to discuss points of theory in his text, but without giving any references to support his arguments. What Hall has taken from the Observationes model is a longer narrative than is found in Ruland.

Hall was not writing from a university background and from the evidence of his library theory had little interest for him unless it directly related to an illness. Writing a text like Platter’s or Horst’s would have involved a large amount of extra work in a field which patently did not particularly interest him. Hall followed Ruland
most closely by merging his own empirical experience with the
learned medical scholarship he found in books.

2.4.4 Processes and Production

The process of production of a casebook is, for Kassell, ‘as
important to the history of medicine as the final product’. Here I
shall try to reconstruct the process that led from Hall’s putative
primary records to his manuscript in its fair copy as we have it.
This is some considerable distance away from a primary casebook
in content and style, pointing to a process which probably took
several stages. None of the earlier phases of Hall’s writing have
survived, so they can only be recreated from comparisons with other
manuscripts.

I have looked at four casebooks written at or very soon after
the consultations they recorded. They were written by Thomas
Willis, Stephen Bradwell, John Pratt and the author of an
anonymous ‘medical practice book’. All show consultations in
chronological order and contain only information related to
consultations: patient identities, illness and therapies, occasionally
outcomes. None contain any additional material suggesting another
purpose. In three cases the original manuscripts were consulted,
the fourth being Dewhurst’s translation of Willis’s casebook.

The layout of reports varies. Willis left at least a full page
blank after the end of each first consultation, sometimes filling the
space up with further material on the same patient but added at a

79 Dewhurst, Willis’s Oxford Casebook; BL, Sloane MS 275, ‘Stephen Bradwell,
Diarium Practicum’; BL, Sloane MS 461, ‘Medical Practice Book 1610-1626’;
BL, Sloane MS 80, ‘John Pratt MD, register’. 
later date. The other three have fewer gaps between reports though Stephen Bradwell left more spaces between his reports than the other two.

In all four, individual reports start with clear statements of patient identities. There is usually a title and name, sometimes a relationship in the case of child or servant, occasionally an indication of an address. Sex was not recorded as such and age was rarely mentioned. An initial summary of the illness was sometimes combined with the name in the heading or stated separately. The casebooks vary considerably in the detail of illness recorded. Bradwell’s are the most concise and Willis’s the longest, mainly because he often went into a lengthy consideration of the theory behind his diagnosis, a feature not seen in the other manuscripts. There is little difference in the presentation of remedies, but Willis more than the others often presents an extended narrative of treatment, response, relapse and further treatment.

All four casebooks share a common feature in relation to their conclusions: an almost complete absence of reference to outcomes. The most common pattern is for a report to end abruptly after a remedy. Willis recorded outcomes more often than the others but still for a minority, about forty-five per cent of all reports. Some of these ended in deaths, so that only about one third finish with a positive statement of cure or recovery.

Given the detail which Hall put in his reports, sometimes decades after the consultation, I suggest that his primary records were most likely to be similar to Willis’s though without the latter’s
lengthy theoretical sections. They would have recorded the outlines of a consultation, including patient identity, statement of illness and therapies. Like Willis, Hall probably recorded details of the course of illnesses and changes in therapy. The presence of two sentences in English in Hall’s manuscript (Cases 106 and 140) point to his notes of conversations with patients having been written in English. Prescriptions would mostly have been in Latin, whether taken from a learned source or his own. He may have recorded more of his conversations with patients than other practitioners and perhaps noted outcomes relatively often.

Such records would not look very different from those in Hall’s manuscript if the latter were stripped of his patient descriptions and conversations, occasional elements of theory and relatively lengthy conclusions often giving thanks to God. All these are elements heavily dependent on borrowings in his manuscript, pointing to their being later additions.

There is a wide gap between such pared down primary records and what is recorded in Hall’s manuscript. There was most probably an intermediate stage, a rough copy or copies in which Hall translated his English into Latin and started to embellish the original reports with borrowings describing the patients and recording the outcomes. The pool of consultations from which they were selected may have been smaller than Cooke’s reference to ‘not less than a thousand’ suggests. If my estimate of Willis’s figures for recorded successful outcomes (around one third) are taken as a guide then around 300 of Hall’s consultations may have been

---

recorded as successful. The figure may be slightly higher for Hall because his long practice in a single locality means that he would have become aware of more successes as a result of seeing his patients ‘in passing’ (as in Cases 77, 118, 144). Even so the numbers to choose from were probably quite limited if he wanted to concentrate on his successes. This second version would then have been Hall’s rough copy for the manuscript as we have it and may have been the other book he mentioned acquiring from Susanna Hall.\textsuperscript{81}

If this hypothetical pattern of writing is correct, Hall must have started thinking about his manuscript some years earlier than its actual composition. I suggest the late 1620s as the most likely time for this. The earliest possible year is 1622, the consultation date for Case 1. Several of the reasons for writing the manuscript mentioned suggested by Nance or Kassell might have applied to him at this time. The mid-1620s was a period when civic and religious difficulties were starting to affect his life outside of medical practice. Planning a manuscript might have been a welcome distraction.\textsuperscript{82} This was also the period when Hall was establishing himself (at least in his own eyes) as a specialist in scurvy. His manuscript shows that his relationships with other physicians were not always the best, while Cooke’s comments suggests that his interest in scurvy was not appreciated:

\begin{quote}
It seems the Author had the happinesse ... to lead the way to that practice almost generally used by the most knowing, of mixing Scorbuticks in most remedies: it was then, and I know
\end{quote}

\textsuperscript{81} Ibid., sig. A3v.
\textsuperscript{82} Wells, ‘John Hall’, pp. 92-93.
for some time after thought so strange, that it was cast as a reproach upon him by those most famous in the profession.\textsuperscript{83} Nance’s suggestions that keeping ‘a record of past treatment’ and compiling ‘a defence of controversial therapies’ were reasons why a physician might choose to keep a casebook could apply here.\textsuperscript{84} There are two surviving letters referring to Hall, that by Lady Tyrrell commending him to a friend and Sid Davenport’s criticising him for his slowness to attend him at home. They show how important a physician’s reputation could be in a competitive marketplace.\textsuperscript{85} Whatever the reason, by 1634 he had enough material to start making his final choices and writing up his fair copy as we have it.

Hall’s manuscript is an indication that the earliest version of a manuscript is not always the most informative. If all we had were his primary notes they would certainly be of interest, but would not provide the wealth of patient information that his final manuscript contains.

\subsection*{2.4.5 Moving Into Print}

Kassell included several printed books within her casebook definition, making a distinction between those printed as textbooks during or soon after the author’s life time, and those produced much later. By this she meant editions such as those by historians such as those of Symcotts by Poynter and Bishop, of Willis by

\begin{footnotes}
\item[83] Cooke, ‘To the Reader’ in Hall, \textit{Select Observations}, 1st edn, Sig.A4r.
\item[84] Nance, \textit{Turquet de Mayerne}, p. 53.
\end{footnotes}
Dewhurst.\textsuperscript{86} This fails to bring out a narrower but still important
distinction exemplified by Hall, between textbooks printed during an
author’s lifetime and those produced soon after his death. Indeed, a
superficial reading of Kassell’s reference to Hall can easily give the
impression that he was personally responsible for publishing \textit{Select
Observations}.\textsuperscript{87}

The first edition of \textit{Select Observations} was published in
1657, twenty-two years after Hall’s death. Though the evidence of
the style and content of Hall’s manuscript points to intending it for
publication, he had no hand in the final editing or publishing
process. There were significant changes in medical thinking
between Hall’s death in 1635, the first edition of \textit{Select Observations}
in 1657 and the second in 1679. This period in England saw the
rise of Helmontianism, increasing acceptance of chymical practice,
and the foundation of the Royal Society in 1660, and change in
attitudes to learning from experience.\textsuperscript{88} Some changes related to
this passage of time are visible in \textit{Select Observations}, such as
Cooke’s removal of references to by-then outdated sixteenth-century
texts and his change of the report headings and the title from Cures
to the by then more fashionable Observations. Cooke also went to
great lengths in his introduction to present an image of Hall’s
practice as driven by empirical observation and not book-learning –
an image which bears little relation to reality.

\textit{Select Observations} is as much or more a text of its
publication dates (1657 and 1679) as of its composition. The issue

\textsuperscript{86} Kassell, ‘Casebooks’, pp. 620, 622, 614, 619.
\textsuperscript{87} Ibid., p. 620; similarly Newton, \textit{The Sick Child}, p. 15.
\textsuperscript{88} Wear, \textit{Knowledge and Practice}, pp. 353-398.
is not that texts such as *Select Observations* should not be treated as casebooks, but about their interpretation. It is necessary to be clear as to which elements in it relate to the date of composition and which to the dates of editing and publication.

If then, printed texts are to be accounted casebooks, priority should be given to those published in their author’s lifetime and with their overt involvement. In this respect I draw attention to a series of reports which were published by their author and meet Kassell’s criteria for a casebook, but have received very little attention. The second edition of *Select Observations* includes, as well as Hall’s reports, ‘an hundred like Counsels and Advices, for several Honourable Persons’ collected by James Cooke.\(^89\) These relate mostly to treatment of members of the Earl of Warwick’s family and staff by several different physicians, including Thomas Willis. Cooke recorded in his preface that he was commanded ‘to receive all prescriptions, so to see them made up in several places where I have attended, both to see them taken, and to observe their success’, so that he was involved in all the consultations he recorded.\(^90\) They should be included in any compilation of casebooks from the late seventeenth century, and deserve study in their own right.

\(^{89}\) Cooke, *Select Observations*, 2nd Edn, Title page.
CONCLUSION

In the introduction to my thesis I said that it was about one man and one document, and I emphasise that statement again here. The most important part of this thesis is the critical edition of Hall’s manuscript. It offers significant improvements in completeness and accuracy over Cooke’s *Select Observations*.

The key message it brings out is the necessity of checking with original Latin documents rather than working only with translations. When working with early modern casebooks written wholly or partly in Latin, an ability to read basic Latin is essential, not an optional extra. When quoting from documents, the distinction between the author’s original words and a translator’s should always be made clear.

The process of producing the critical edition has thrown up other findings. The most significant of these is Hall’s use of borrowings from Latin printed texts, a hitherto unknown expedient in the writing of casebooks. This in turn facilitated other avenues of investigation, leading to the identification of the books in Hall’s working library. In keeping with my focus on Hall and his manuscript, I have placed many of my conclusions in an outline of Hall’s life and what the new reading of his manuscript has revealed about it. I finish by considering matters arising from the two specific topics addressed in Chapters 1 and 2: Hall’s working library, and what his manuscript contributes to ideas about casebooks.
John Hall started his medical education and training in Cambridge in 1589. He would have been taught using traditional Latin texts, which he might have owned or borrowed, perhaps from the newly established library of Lorkyn’s bequest. Some of the older books in his library might have come from his father at this time. His frequent use of late sixteenth-century texts in later practice, including Valleriola’s *Observationum* and Ruland the Elder’s *Curationum*, suggests that these were early favourites which he learned to rely on. Most of his texts were in the Hippocratic and Galenic line. While some show a leaning towards chymiatric practice, nothing suggests he was a committed Paracelsian. There is nothing to suggest he shared his father’s interest in astrology as part of medical practice. If he owned English medical texts, there is no evidence to show that they were important in his practice. Hall probably travelled abroad at least briefly after graduating, going by the evidence of Cooke’s comment in *Select Observations* on his knowledge of French and his ownership of at least one French text, Liébaut’s *Thresor des Remedes Secrets*.

Once settled and married in Stratford-upon-Avon in 1607, Hall built up a wide-ranging practice particularly among the country gentry and leading town citizens. He also treated poorer citizens of Stratford-upon-Avon on occasion, as well as developing links with some leading noble families, particularly the Earls of Northampton and the Talbot family in Shrewsbury. His treatments were mainly based on well-established remedies to be found in pharmacopoeas, but on occasion also taken from his other medical books. He used specialist texts to find therapies for specific
purposes, such as for the treatment of children. These came either from single-topic books such as Vittori’s *De aegritudinibus infantium*, or from specific remedies within more general texts.

Hall would have kept records of his consultations, probably similar in content and style to other surviving primary casebooks such as Willis’s. They were most likely written in a mixture of English for recording the consultation conversations and Latin for the remedies. They did not contain the personal descriptions of patients that he added later. These records were available to him later when he started to write his manuscript.

Hall continued to purchase and use newly published books throughout his life, but preferred to rely on a small number of familiar authors for most of his treatments. These included some from the sixteenth century such as Valleriola, Ruland the Elder, Crato and Bruele, alongside more contemporary authors such as Platter and, for scurvy, Gregor Horst, Eugalenus and Sennert. He was interested enough in the new chymical ideas to keep purchasing books about them, but was cautious about applying them in practice.

London was the centre of the English book trade, particularly for imported Latin books (the ‘Latin Trade’) but Oxford offers an alternative possibility for his purchases. There were well-established bookshops there. The link through the Bodleian Library to the European book fairs would have been more informative for Hall than any alternative in London at the time.

Some time in the 1620s, perhaps as a result of successfully treating the Countess of Northampton in 1622, Hall developed an
interest in the diagnosis and treatment of scurvy. He bought specialist books on the subject and in his own mind at least developed a knowledge of this disease greater than that of other physicians in nearby towns. He felt the need to emphasise his successes in relation to other physicians, particularly in relation to scurvy. While happy to be called on for a second opinion when others were not producing a successful cure, he found the experience of being on the other side of a second opinion threatening.

Hall’s relationships with non-physician practitioners in and around Stratford-upon-Avon were on the whole friendly. He accepted that surgeons, nurses and midwives would often be the first to provide treatment, and that patients would turn to him only if their illness was not cured. In the same way he accepted self-treatment by patients as the norm. He provided copies of remedies to patients on request, including remedies taken from his Latin texts. My findings show there was a direct link between the learned medical world and that of the wider medical market place in which lay people exchanged recipes.

At some time in the middle to late 1620s Hall conceived the idea of producing a book of his own cures. The reasons for this are unclear, more likely to be a combination of factors than a single stimulus. He was at this time increasingly caught up in the troubles between the Town Council and the Parish Church in Stratford-upon-Avon. A retreat to medical matters may have provided a comfort. His new-found interest in scurvy might have been something he felt worth recording, especially as a way of
establishing his reputation compared to other physicians nearby. Publications by nearby physicians, John Cotta and James Hart in Northampton, would have showed him that being a provincial physician was no bar to becoming an author.

Hall’s primary sources for his composition would have been his original casebooks. The tidiness and minimal corrections in his manuscript imply that there was an intermediate rough stage in which he chose his material and started arranging it. At this stage he must have decided that he would write in Latin rather than English. This is perhaps another sign of his need to establish his learned credentials. The use of Latin led him to supplement his own Latin knowledge by borrowing texts from books in his library.

The secondary casebooks translated into Latin were the raw material for his final manuscript which he started in 1634, or 1633 at the earliest. He must have decided by this time that he intended to concentrate on successful treatments following the model of curationes rather than observationes. His long practice in a single town, and consequent knowledge of the population he served, would have helped him identify successes, and enabled him to add information on the long-term follow-up of patients. At this stage if not earlier he chose a title which echoed Ruland’s *Curationum*. Changes to his manuscript are rare, but show that there was still a process of correction in his final fair copy. The first forty-seven reports all have headings giving patients’ names and were chosen from all periods of his practice with no particular chronology. Thereafter he switched to using the illness as a heading, with patient details at the start of the main text. He also worked more
chronologically, starting with earlier (pre-1625) consultations and moving forwards to the 1630s. By 1634/35 the consultations and their transfer into the manuscript must have been almost simultaneous, as evidenced by the greater length and detail of the final reports.

Throughout the manuscript Hall presents himself as an empathetic practitioner, recording his patients’ joys and sorrows sympathetically. He took particular pleasure in the successful outcome of pregnancies for both mother and child after his treatments. At the same time he made it clear to his patients, when necessary, that treatments might be long and difficult, and that he relied on their cooperation to achieve a successful result. Hall’s recording of his interactions with patients is a unique feature of his manuscript. This does not necessarily indicate uniqueness in practice. Given that he was in many ways a typical physician of his time (apart from the interest in scurvy and the decision to draft a book) it is probable that these aspects of his practice were shared by other practitioners and may be found in other manuscripts.

The opportunity to recreate Hall’s working library was an unexpected bonus of this critical edition. Forty-three authors and sixty titles can be found in Hall’s text compared to the six authorities identifiable in Select Observations. About half of the new sources are in references which Cooke removed from Select Observations, but the other half could only be identified by matching Hall’s texts to originals available on the internet. This technique, though time-consuming, offers a new perspective on the
composition of early modern medical manuscripts and a new way of investigating them.

Few medical libraries from the early seventeenth century have been identified, so Hall’s is an important addition. While not large by comparison with other libraries, Hall’s was respectable, especially given that our knowledge of it is incomplete. The combination of the library with the evidence of Hall’s use of his books demonstrates that he had little interest in theory in isolation from practice. Hall used his library to guide him in diagnosis and to provide remedies, either applied exactly as written or modified to suit the patient and the illness. As with other libraries, Hall’s contained books published over a lengthy timescale. Some of his books were used within a year or so of their purchase (Gregor Horst’s Observationum) while others had been published some five decades before he was practising (Valleriola’s Observationum). The practicae of John of Gaddesden and Bernard de Gordon were medieval texts recently republished, while Beguin’s Tyrocinium chymicum and Penot’s De denario medico demonstrate strong new chymical and Paracelsian views. Hall managed to combine all of these in his practice within a predominantly Galenic and Hippocratic concept of illness.

The titles above all illustrate the important point that Hall relied almost exclusively on Latin texts in his practice. This is a significant finding which has not been much explored. Different strands in the history of medicine have concentrated either on the relationship between learned and lay medicine (using predominantly vernacular English texts as sources) or on the relationship between
Latin medical books and the theory and ideas they present. What Hall’s manuscript demonstrates is that Latin textbooks were part of the daily working resource of a physician and must be taken into account in that context.

Hall’s working library consisted almost entirely of practical books, with consilia and curationes making up about half of the total. Most of the rest were drawn from other categories of practical texts. He also owned a number of books on single topics, including illnesses (Ungaric fever, scurvy), patient groups (women, children) and diagnostic techniques (uroscopy). Judging by Hall’s ownership and use of them, these were an important practical resource. Hall’s working library was not static but changed its character over time, reflecting the changes in his career from student to established practitioner and his changing interests. On the other hand, a comparison between Hall’s borrowings and his book ownership shows no tidy and direct relationship between them. Hall’s library contained a considerable number of chymical texts, but they were not used for borrowings as frequently as were some of the older and more traditional volumes. His ownership reflects, but does not directly represent, his use of texts in his daily medical practice.

Chapter 2 looks at Hall’s manuscript in the context of casebooks. Its Select Observations version has been called a casebook since the nineteenth century. It was of interest to medical writers for many years before coming to the attention of historians. Its use by medically qualified authors from the late nineteenth century, and by historians from the 1970s, illustrates changing attitudes to medical history for over a hundred years. In the late
nineteenth and early twentieth century it was still regarded by physicians as relevant to medical practice, though becoming outdated. By the mid-twentieth century Hall was becoming a figure to be admired by medical writers for being ahead of his time. More recent accounts in medical journals have been more balanced, presenting him as a figure within his own time.

*Select Observations* became of increasing interest to the new wave of social and cultural historians from the 1970s and 1980s onwards. Historians tend now to draw a clear distinction between the progress- and personality-centred histories of previous generations of medically qualified historians and the new broader social and cultural approaches. The evidence from the uses made of Hall’s and other casebooks suggests a much less clear-cut change of attitudes at the time.

Since the 1980s there has been a trend towards the use of much larger numbers of casebooks in history studies, a response to the development of internet resources which have made finding and accessing casebooks less difficult than previously. This trend has led to a need for clearer ideas of what is or is not a casebook. Wendy Churchill and Lauren Kassell have addressed this point in different ways. The evidence from Hall’s manuscript allows their arguments to be taken further.

Churchill’s semi-quantitative analysis shows points on which Hall’s manuscript is similar to the common pattern of the casebooks she examined, and others on which it differs. Sex is the most common patient variable identified, age being much less often recorded. My work on Hall’s manuscript has benefited greatly from
the additional information gained by Joan Lane’s work on identifying and dating Hall’s patients, providing additional age information on over half the patients. She also greatly increased the number of patients for whom a date of consultation could be established.¹

Social titles are important indicators of status. I part company with Churchill in preferring not to aggregate them, in particular keeping clear the distinction between those Hall called *generosus/-a* (the landed gentry) and *magister/ra* (the leading town citizens). Religion concerned Hall more than other casebook compilers. As well as his well known identification of some patients as Roman Catholic, there are also pointers to the Puritan patients whose values he shared.

Kassell has proposed a definition of casebooks as ‘a serial record of practice’, while recognising a wide diversity in ways of doing this. Her models for keeping casebooks are appropriate to primary casebooks, drawing on diaries and account books. Hall’s manuscript demonstrates that learned Latin texts could also be models.

Both Churchill and Kassell point to the internal structure of casebooks, particularly their chronologies. With the aid of the additional consultation dates provided by Lane, it has been possible to establish that Hall wrote most of his manuscript in 1634 and 1635. His method of composition changed at intervals, starting by drawing on consultations across a wide range of dates. He

---

¹ Lane, *John Hall*; Her approach belongs to a different methodology in the history of medicine, but my work with Hall’s patients shows how beneficial her approach might be in gaining deeper understanding of casebooks generally.
subsequently switched to a more chronological method which began with earlier cases and worked forwards to those near his death in 1635. This pattern helps to provide information on changing patterns of his practice, as with the late development of his interest in scurvy.

Printed works such as *Select Observations* are included within Kassell’s definition of casebooks. My comparisons between Hall’s manuscript and Cooke’s much altered edition has made me wary of posthumously printed works, even if published within a few decades of the death of the author. At the least one must take account of any significant time lag between the dates of original composition and publication, and related changes in medical thinking and practice when interpreting them. I point to James Cooke’s own casebook, published in the second edition of *Select Observations*, as a source which deserves more attention than it has received. It meets Kassell’s definition, and in addition was seen into print by Cooke himself.

I conclude by returning to the centrality of John Hall and his manuscript in this critical edition. I hope it will prove useful, but reiterate the need not to allow any translation to stand in the way of due attention to Hall’s own words.
APPENDICES

APPENDIX A: THE METHODOLOGY USED FOR IDENTIFYING
JOHN HALL’S BORROWINGS

The process of identifying the borrowings grew from some chance findings, and was a lengthy and complicated task. It started simply enough, with a few on-line searches to check the spellings of technical words but then became a process of checking Hall’s manuscript from beginning to end. The most accessible if not the most reliable database for doing this was books.google.co.uk. Other significant supplementary sources were the digital collection of the Bayerische Staatsbibliothek (digitale-sammlung.de) and of the Bibliothèque nationale de France (bnf.fr). The Early European Books database (eeb.chadwyck.co.uk) is too recent a development to have been much help, but must be an important resource in the future.

The first few searches on single words showed by chance that they were frequently embedded on longer passages which matched text in the Libellus, and that a systematic search would be necessary to identify as many borrowings as possible. Trial and error showed that searching for two- or three-word strings produced the most matches, though it was not adequate as a strategy on its own. In some cases Hall had changed the word order of his source, and these passages could only be identified by searching on groups of separate words. Growing familiarity with Hall’s own Latin helped to identify certain phrases or expressions as probable borrowings.
(gerunds and gerundives are uncommon in his own words, but quite frequent in borrowings for example).

Spelling variations and the limitations of Google’s OCR (optical character recognition) software also created problems. Hall sometimes abbreviated words in a different way from his source, or expanded words which had been abbreviated and vice versa. Abbreviations were not standardised at the time, and varied between authors and editions. Sometimes the patients’ sexes and ages in Hall’s source differed from his own patient, so that so that grammatical endings changed. In addition, Google OCR struggled to cope with the poor quality of print in many of the sources, and with early modern printing conventions. Long esses are usually rendered as f, and ligatures are often unrecognised; ‘v’ and ‘u’ had their early modern values. The essential questions were first, how might the original text have been spelt compared to Hall’s, and then, how might that text appear when digitised? Sometimes several trials of different combinations of spellings, abbreviations, and possible OCR readings were needed to produce a result.

Unfortunately one important section of text was almost entirely unsearchable: the recipes. These are almost always abbreviated in the originals, but in no standard way even within a single book. They also contain non-standard characters such as pharmaceutical and quantity symbols which the OCR did not recognise. The recipes I have identified were usually found by searching on adjacent plain text such as preparation instructions. A few borrowings were identified directly from the sources. Hall had a tendency to borrow several texts from pages in close proximity, so
that a search forward and back from an identified text did
sometimes reveal others.

For my standard searches I set year limits of 1550 to 1635.
The choice of 1550 was a pragmatic one based on experience, and
1635 was the year of Hall’s death. In no case did test searches prior
to 1550 find a text which could not be identified after that, and it
seemed unlikely though not impossible that Hall’s library would
have gone that far back. This timescale also had the benefit of
covering the probable life span of John’s father William, and
therefore including books he might have acquired and passed on to
his son. The end point was useful as a standard cut-off, but was
not definitive. Several texts were identified by searching later
periods, on texts with better quality printing, and then working
backwards to an edition in Hall’s lifetime. The borrowing from
Thomas Adams in the epigraph for example, was initially found in a
nineteenth century volume of collected sermons.

I have not included as borrowings any identical texts from
two or more sources. This is a conservative approach as Hall might
well have owned one or more of them, but in the absence of a firm
identification they have all been excluded. Fortunately different
editions often had slight differences of words which allowed one or
other to be identified as Hall’s. My approach throughout has been
conservative, and it is very likely that there are other unidentified
borrowings still to found. A method of searching for recipes which
is not overly time consuming would certainly reveal more. On the
other hand, I am confident that I have not to any serious extent
misidentified any borrowings or their sources.
APPENDIX B: NEW PATIENT IDENTIFICATIONS

Joan Lane’s work on identifying John Hall’s patients is and will remain indispensible.1 It was however completed twenty years ago and does contain a few inaccuracies. She did not have access to the range of material now accessible to scholars on the internet, and conducted her research through the written material available to her, and by correspondence.2 In addition, her main source was Select Observations, not Hall’s manuscript, so she was misled in some cases by Cooke’s errors or editing. Her comments suggest she cast an eye over the introductions and conclusions to each case in the manuscript, but did not go into the Latin text in any depth. Her work is nonetheless the essential starting point on anything to do with the patients.

I have changed the identification or attributions of ten patients. Several identities remain unknown or uncertain, but new identities are proposed for four named patients. For other patients, details such sex, age and consultation date change or become less certain.

Case 6, Mr Nash’s serving maid, (S.O. p. 12, Lane p.15)

The Latin makes it clear that this was a female servant, but Cooke’s translation made the gender male. Lane identified the patient as Joseph Jelphes which cannot be correct. The patient is now unidentified. The consultation remains undated.

Cases 27, 34, Captain Basset (S.O. pp. 21, 62, Lane pp. 47, 63)

---

1 Lane, John Hall, pp. 1-349.
2 Warwick, Warwickshire County Record Office, CR3999 Box C26, Joan Lane’s files.
Lane identified the patient as Captain Basset from Devon, who was commissioned Captain under Count Mansfeldt in 1624. Based on this identification and his age, he would have consulted Hall in 1634. This does not fit though with Hall’s comment that Captain Basset ‘remained well for a long time’, as he was already writing his manuscript in that year.

A different Captain Basset served in Ireland in 1599 and 1600. He petitioned King James for a pension in 1605 ‘having long served in the wars of Ireland’. This Captain Basset served at the same time as the husband of another of Hall’s patients, Katherine Lady Hunks. If this is correct it suggests a consultation around 1620, which fits better with Hall’s comment on his subsequent health. The patients identity changes and the consultation moves to around 1620.

Case 39, Joan Judkin (S.O. p. 36, Lane p. 75)

Hall gave two ages for this patient, first writing ‘et.50’ and a few lines later, ‘et.40’. Cooke used the first age, from which Lane derived a consultation date of 1634. The second date is written in a different ink and pen from the main text, so I prefer to see it as a correction, which Hall then failed to follow through by deleting the

---

4 Sir George Carewe to Viscount Cranborne, [?1605, before May 4], Two letters – (1) in favour of Captain Saxey and Captain Bassett; https://www.british-history.ac.uk/cal-cecil-papers/vol17/pp167-206.

5 Lane, John Hall, p. 245.
age he wrote first. The patient’s identity is unchanged but the consultation moves to 1624.

**Case 40, Mr Winter (S.O. p. 75, Lane p. 75)**

Cooke gave Winter’s age as 44, and Lane identified him as John Winter of Huddington, Worcestershire. What Hall wrote was ‘et.4’, with a raised dot after the 4, which is different from the dashes he used to indicate an incomplete date, as in Case 156. Hall frequently used the raised dot to indicate spaces between words. Winter suffered from worms, and his treatment, with a mild purge and an umbilical plaster, is similar to that Hall used for other children rather than for adults. The young Mr Winter may have been one of John Winter’s three children, born before his wife died in 1622. There is no record of their dates of birth. The patient identity changes, but the consultation can only be approximately dated to the early or mid 1620s.

**Case 86, Wilson of Stratford-upon-Avon (S.O. p. 78, Lane p.159)**

Cooke interpreted this patient as being male, but the grammar of the text makes it clear she was female. The patient remains unidentified and the date of consultation unknown.

**Case 109, Mr P (S.O. p. 97, Lane p. 197)**

Hall wrote ‘Generos\$ \textit{p\textsuperscript{ano} seq.}’ which Cooke contracted to Mr P. Lane compared this with Hall’s original and read ‘\textit{p\textsuperscript{ano}}’ as Psamire (an easy error with Hall’s italic) and took this to be Hall’s method of anonymising the patient. I translate the phrase as ‘The above gentleman in the following year’. This identifies the patient as the George Underhill of the previous case, and the date of the consultation as 1631-2.
Case 122, Mrs Richardson (S.O. p. 112, Lane p. 223)

Lane identified this patient as Elizabeth Richardson, baptised 1569, married 1607, who bore three children between 1607 and 1611. Her husband died in 1624. Cooke omitted Hall’s closing remark: ‘after her husband died she married and bore children six years afterwards’. It is hard to match this with Lane’s patient, for whom no other marriage is recorded either before or after that to William Richardson. The identification is doubtful, and no date can be suggested for the consultation.

Case 160, Peter Hugges, (S.O. p.155, Lane p. 309)

Cooke did not give this patient’s name, describing him only as ‘the Lord of Northampton’s gentleman’. On this basis Lane identified him as William Beale. Five lines into the Latin text though, Hall named the patient ‘Peturus Hugges Wallicus’ – Peter Hugges the Welshman. He was perhaps seen on one of Hall’s visits to Ludlow. There are no more details for Peter Hugges, and the consultation cannot be dated.

Case 169, Mr Kimberley, (S.O. p.167, Lane p. 331)

Apart from the name, we know only that Hall saw this patient at the age of 26. Lane identified him as either Gilbert (born 1590) or William (born 1592), giving dates of consultation in 1616 or 1618. However, Hall treated his Mr Kimberley with two remedies reproduced almost word for word from Horst’s Observationum published in 1625. The consultation must have been after that date, making both Gilbert and William unlikely candidates. Lane’s notes also mention William, Robert and Justinian Kimberley, sons of Robert, a shoemaker in Bromsgrove. Justinian was born in 1601.
so would have been 26 in 1627, a feasible date. There is no positive
evidence and the patient is left unidentified and the consultation
undated.

**Case 176, Simon Underhill (S.O. p. 160, Lane p. 319)**

Lane dated the consultation to 1629 based on Hall’s estimate of age
(‘about 40 years’) and the patient’s baptism in 1589. Hall also gave
a consultation date of 1633, which Cooke omitted. The patient’s
identity is probably unchanged, but I prefer Hall’s date for the
consultation.
APPENDIX C: JOHN HALL’S PHARMACOPOEIA

This Appendix provides a key to the ingredients and methods of manufacture of compounds referred to by Hall. It is not intended to indicate the source of the recipe, though I have used books from Hall’s working library as much as possible. Simples are not listed as they have many sources, but nearly all may be found in the *Pharmacopoeia Londinensis*. English equivalents for compounds in the *Pharmacopoeia Londinensis* can be found in Culpeper’s *London Dispensatory*.6

What is evident is that Hall used a relatively small range of compounds, though he combined them in different ways to create much more variety in his recipes. The *Pharmacopoeia Londinensis* contributes 119 compounds, with another thirty seven coming from other sources.

For comparison, the second edition of the *Pharmacopoeia* lists 785 compounds, so Hall used only about 15 per cent of what it had to offer. This suggests that Hall preferred to use a small number of familiar compounds rather than experimenting with the whole range available in a very long list.

At the foot of the main table is another giving the relationships between the different quantities used.

---

APPENDIX D: A MEDICAL AND PHARMACEUTICAL GLOSSARY

This appendix lists, with definitions, the more unusual medical and pharmaceutical words and phrases (other than remedies) used in the Little Book. Rather than attempt to explain them myself, or to use present-day definitions, I have relied on English medical texts of Hall’s period, mostly using ones which give information on the causes as well as the appearance of illnesses. I have resorted to Latin texts (with my own translations when necessary) only when I could find nothing more appropriate in English.

**Abdominal swelling**: Ascites is that, when great store of winds, but greater of water, is gathered together in that place, which doth lie between the guts and the syphach [peritoneum].

**Bastard tertian fever**: is caused, when choler is mixed for the most part with fleame [phlegm] in this feaver also the time of the fits doth exceed twelve hours [...] the signes of concoction do appear more slowly, neither is there such greate heate [...] as in the exquisite tertian.

**Bleeding from the mouth**: Blood is oft voyded from the gummes, and mouth itselfe, and then the spittle is of a bloody colour and very little voyded out and that without a cough; if it doe come from the thread [...] it is voyded by hemming, not by cough [...] but if the blood doth come from the lungs, then is the blood foamy [...] as oft as blood is voyded because some great veine is burst, then plenty of blood is cast up.

---

**Catarrh:** is a distillation commonly taken, and is a deflux of humours and excrements from the head or braine into the other parts of the body.\(^\text{10}\)

**Cold:** a cold distemper simply, without the fluxe of any cold humour. This paine in the head is caused of outward cold, as when the aire is very cold, especially when one tarrieth in it long time bareheaded.\(^\text{11}\)

**Colic:** a continuall passione of the bowel which is called colon, and there follows it a difficulty of voiding excrements, and wind at the lower parts.\(^\text{12}\)

**Consent** (see under Propriety): a pain by propriety is when the cause [...] is in the part pained, as when the head-ach comes from humors in the head [...]when it proceeds of vapors sent up from the stomach or any other part it’s called head-ach by consent or sympathy.\(^\text{13}\)

**Continual burning fever:** if choler do putrifie and rot within the vessels, it causeth a continuall tertian, or burning fever.\(^\text{14}\)

**Diarrhoea:** a copious and great fluxe of the wombe [sic] without exulceration and inflammation. It is caused through weakness of the instruments that belong to digestion, also through abundance of nourishment and meat that is moist and vicious, and through

---

\(^\text{10}\) Bruel, *Physicians Practice*, p. 151.

\(^\text{11}\) Barrough, *Method of Physick*, p. 5.

corruption of the same meate. Moreover, gnawing and biting of
those things that are contained in the belly.\(^{15}\)

**Difficulty of breathing:** Asthma ... caused when as grosse and
clammy humors by gotten in abundantly into the gristles or lappets
of the lungs, or that there be some other swelling in it, like a
botch.\(^{16}\)

**Dropsy of the chamber pots:** Diabetes ... Latini urinae
incontinentiam, urinae fluorem, urinam involuntariuam, hydropem
matellae, vel aquam intercutex ad matulam vocant; [Diabetes ... in
Latin they call it incontinence of urine, flowing of urine; involuntary
urination, dropsy of the pot; or dropsical water in the chamber
pot].\(^{17}\)

**Dysentery:** an exulceration and inflammation of the bowels ...
caused through exulceration of the bowels which sometims
chanceth through outward causes, as of cold, heate, and
moistnesse [...] drinking of pernicious and naughtie medicines [...] eating of fruit. \(^{18}\)

**Epilepsy:** a convulsion, drawing and stretching of all the parts of
the whole body, but not continually [...] there be three differences in
this sicknesse or disease. The first is caused when this sicknesse
cometh only of disease in the braine, as it chanceth when grosse or
clammy fleame or sharpe choler doth stop the passage of the spirit
in the ventricles [...] secondly it is caused through an evill affect in
the mouthe and stomacke, that is, when the braine laboureth to
drive away the vapours and humours that ascend up to it from the

\(^{15}\) Ibid., p. 119.
\(^{16}\) Barrough, *Method of Physick*, p.81.
\(^{17}\) Ruland the Elder, *Curationum*, p. 152.
stomacke. Thirdly [...] when the patient feeleth a thing like unto a cold aire, coming from some member and creeping up to the braine.\textsuperscript{19}

**Erratic fever**: are such feavers as be contrary to [those which come justly at their appointed time] because they keep no certaine and juste time nor any order of fits, nor the intermission between them, as be those feavers which ingender of melancholy.\textsuperscript{20}

**Exercise**: Qui hoc electuarium assumit exercitio utatur;[Whoever takes this electuary should take exercise].\textsuperscript{21}

**Excessive quantity of urine**: diabetes is a continuall disease about the reines, causing much thirst; and also whatsoever is drunk, even as it is taken it is pissed out againe. The disease is ingendred of weaknesse of the retentive vertue of the reines.\textsuperscript{22}

**Flux of the reds**: Uteri fluor in Latin, fluxe of the matrice in English, is a continuall distillation, and flowing out for a long time, of the whole body purging itselfe [...] for some is red as bloud purified [...] if pure blood come forth, as in the cutting of a veine, you must take good heede that some erosion and gnawing be not ingendred in the wombe.\textsuperscript{23}

**Flux of the whites**: fluxe of the matrice [...] is a continuall distillation and flowing out for a long time of the whole body purging itself. That which is voided out doth represent such forme and

\textsuperscript{19} Ibid, p. 40.
\textsuperscript{20} Barrough, *Method of Physick*, p. 216.
\textsuperscript{21} Crato, *Consiliorum ... Liber Secundus*, p. 379.
\textsuperscript{22} Barrough, *Method of Physick*, p. 165.
\textsuperscript{23} Ibid., p. 188.
colour as the humour that doth abound in the bodie [...] some white, which cometh of fleame.24

**Frenzy:** a disease where the mind is hurt, and doth onely differ from madnesse [...] for that a feaver is joyned with the frenzie, and therefore the frenzie may be called a continuall madnesse and fury joyned with a sharpe feaver.25

**Generalised dropsy** (anasarca): a passion, that it is not without plenty of watery humours, because the blood-breeding faculty is vitiated [...] anasarca is a scattering of phlegmy humours over the whole body [...] the whole body increaseth most unnaturally, for it is all over swelled.26

**Giddiness:** a disease wherein the patient doth imagine that his head is turned round about [...] through the inordinate moving of windy vapours and spirits contained in certaine parts of the braine [...] caused either of the braine itselfe being distempered and evill affected, or of the mouth of the stomacke offending the braine.27

**Gonorrhoea:** excretion and shedding of seede or sperme against the patients will, and without sicksnesse of the yard. It is caused through imbecilitie and weakesse of the reutive in the vessels containing the sperm [...] this disease chanceth not only to men, but also to women, and in women it is hard to cure.28

**Gout:** the joynt-gout is a feeblenesse of the joynts, and pain coming upon them at certain distances of time; for the most part it is

---

24 Ibid., p. 188.
25 Ibid., p. 21.
28 Ibid., pp. 178-179.
caused by a flux, which winds itselfe betwixt the ligaments, 
filmes, and tendones of the joynts. 29

**Haemorrhoids**: an unfolding and spreading abroad of the veines of 
the well. Of these some be blind, which do swell, and do send out 
none, or very little blood; some be open, which be set wide open 
abroad certaine times, and do send forth blood. The haemorrhoids 
are caused through dreggie and melancholy blood, when there is 
abundance thereof, which the liver sendeth to those veins. 30

**Heartburn** (cardialgia): the paine of the stomacke is a painefull 
sense of the mouth of the stomacke caused by a bitting matter; p. 
241: caused by sharpe and biting humours, which doe sticke about 
the mouth of the stomacke, whereby the appetite is abated, and 
they are in more paine before meate than after. 31

**Heart palpitations**: panting and trembling of the heart [...] caused 
of all such things as do trouble and affect the heart above nature. 32

**Hectic fever**: when heate is kindled in the sound, hard and fleschie 
parts of mans bodie [...] like to a hote vessel; for as the vessell doth 
heate the water that is poured into it: so also the feaver hectic. 33

**Hemiplegia**: the palsy possessing one side. 34

**Hypochondriac melancholy**: The hypochondriacal or windy 
Melancholy is often caused by the overboyling of dreggish blood, 
which was settled neere unto the stomack, or gristles of the short 
ribs, by a distemper of the liver, stomacke, or miseraical veins; 

---

31 Bruel, *Physician’s Practice*, p. 239.
33 Ibid., p. 215.
principall seate of the braine, and so doe disquiet it and stirre up melancholy.\textsuperscript{35}

\textbf{Jaundice:} a shedding either of yellow choler or of melancholy all over the body [...] many times the jaundice is caused and doth chance when the blood is corrupted without fever, of some outward occasion, and is made cholericke.\textsuperscript{36}

\textbf{Leeches:} where wee cannot conveniently scarifie, the leeches are to bee applied as in the hemorrhodes, and other griefes of the anus.\textsuperscript{37}

\textbf{Liver obstruction:} caused of vapours and grosse windinesse, hard to digest. But sometime it is caused of grosse and vicious humours in the ends of the veines, springing from the flat part of the liver, by which veines nourishment is sent to the liver from the stomach and bowels.\textsuperscript{38}

\textbf{Lyentery:} in this disease the bowels do not hold the meate, but they let it slide away before it be changed and perfectly digested, even in the same forme and likenes that it was eaten [...] it is caused oftentimes through a grievous fluxe disenteria by name going before, which causeth deepe exulceration of the bowels.\textsuperscript{39}

\textbf{Magisterium:} magistral syrup is a particular syrup prescribed by a skilful physitian to his patient for a particular disease.\textsuperscript{40}

\textbf{Malignant fever:} Cum vero ab aliis causis ortum habet, morbus malignus vel febris maligna vocatur; Bruel, \emph{Praxis Medicinae}, p.
translated as: when it is caused by outward causes, it is called a pestilent feaver, or plague.\textsuperscript{41}

**Mass:** by mass, alwaies understand the composition brought into such a thickness, that you may easily with your fingers make it into pills.\textsuperscript{42}

**Melancholy:** an alienation of the mind, troubling reason [...] without a feaver, and is chiefly engendred of melancholy occupying the mind [...] sometime it is caused of the common vice of melancholy bloud being in all the veines of the whole body [...] oftentimes onely the bloud which is in the brain is altered [...] sometime is engendred through inflammation, and evill affect about the stomacke and sides.\textsuperscript{43}

**Mother:** is a running back of the wombe, or of maligne vapors bredded in the wombe, unto the higher parts, whereby the bowels, midriffe, and stomacke, are sometimes so crushed, that they cannot be widened by breathing.\textsuperscript{44} See also Suffocation of the womb.

**Nosebleed:** oftentimes bleeding at the nose is caused by nature, which doth by this means expell the excrements, and that which is troublesome to the body [...] sometime it is caused by the evil affection of the veins [or] the veines bleed because some gnawing humour hath got thereinto; also: haemorrhagia [...] doth signify bleeding at the nose [...] through which for the most part nature doth expel the superfluous blood in many.\textsuperscript{45}

\textsuperscript{41} Bruel, *Physician’s Practice*, p. 397.
\textsuperscript{43} Barrough, *Methodof Physick*, p. 45.
\textsuperscript{44} Bruel, *Physician’s Practice*, p. 372.
\textsuperscript{45} Ibid., pp. 142-143.
Obstructed menstruation: The menstruis are wont to be suppressed and stopped against nature, either through overmuch grossenesse, or slendernesse. For fat folk are more without bloud than other folke, and they have lesse and streighter [narrower] veines [...] but those that are leane and slender [...] have no superfluous blood in them.\textsuperscript{46}

Omphacine: Omphacy, unripe, it signifies properly the juyce of unripe grapes.\textsuperscript{47}

Pain in the side of the head: Hemicrania is a painfull evil remaining in one halfe of the head, either on the right halfe or on the left [...] in English is called the migrime. This paine cometh be fits, and some the griefe is felt within the skull, in some within deepe in the braine, and in some other night to the temples [...] this paine is caused by ascending and flowing of many vapours or humours either hote or colde, either by the veines or arteries, or both.\textsuperscript{48}

Passing blood: a disease of the reines, through the which thin wheyish blood is pissed. It is caused through weeknesse of the reines [...] or [...] through amplitude of the reines [or] through breaking of a vein in the reines [or] through gnawing of the veines by sharpe humours flowing from above.\textsuperscript{49}

Phthisis: a kind of consumption.\textsuperscript{50}

Pleurisy: an inflamation of the thinne and small skinne which clotheth the ribs on the inner side [...] whereby it appeares that

\textsuperscript{46} Barrough, \textit{Method of Physick}, p. 188.
\textsuperscript{47} Anon., \textit{A Physical Dictionary}, Sig. K1.
\textsuperscript{48} Barrough, \textit{Method of Physik}, p. 17.
\textsuperscript{49} Ibid., p. 158.
\textsuperscript{50} Anon., \textit{A Physical Dictionary}, sig. L1.
every paine of the side is not a pleurisy [...] if the pain be great
because of windines, this is a bastard pleurisy, then are they
without a fever.51

**Quartan fever:** An intermitting quartane is engendred of melancholy
petrified and rotted without the vessels. It is so named because it
cesseth two days, and returneth againe the fourth day.52

**Quiet day(s):** the day that the sicke hath not his fever.53 Other
examples showing that it refers to treatments on the middle day
between attacks of a tertian fever are found in Plater and Ruland.54

**Quotidian fever:** caused of sweete fleam [phlegm] being putrified
and rotten without the vessels: and is so called, because it
returneth every day.55

**Rheum from the eyes:** an inflamation of the tunicle or membrane
growing close unto the eye [...] there cometh withall a tumor of the
eye, redness and a loading paine [...] sometimes the eye is swollen
to the cheeks, and store of tears fall from them caused by vehement
paine, and pricking of the eye.56

**Saltpetre:** said to be beneficial in Ungaric fever.57

**Scurvy:** a stopping of the spleen hindering thereby the course of
melancholy, whiche mingling with the rest of the bloud infecteth all
the body with vile wasting corruption, the grosse part whereof
falling downe, staineth the legs with spots like unto pomgranats,

---

53 Ibid., p. 233.

56 Bruel, *Physician’s Practice*, pp. 126-7
57 Du Chesne; *Pharmacopoea Dogmaticorum*, p. 244.
and the thinner part being carried up defileth the tender gums with sharpe fretting and loathsome growing out of the flesh.\textsuperscript{58}

**Sore throat**: The squinancy is an inflamation of the throate, or the highest parts of the gullet, hindering breathing and swallowing, when as the fault is neyther in the brest nor lungs. This disease doth threaten present danger by strangling because [...] a man is deprived both of breath and sustenance.\textsuperscript{59}

**Spasm of the mouth** (tortura oris): if it be from moisture, it is a kind of palsie; if through dryness, then a kind of cramp; and is commonly a sign of death.\textsuperscript{60}

**Stone**: the stone of the reines happeneth oftener to men of perfect age than to children. The cause [...] is continuall crudity and rawnesse of the stomach, whereby abundance of grosse and earthy humours is heaped up together, and burning or fierie heate about the reines parcheth the humours, and knits them together, and hardeneth them into a stone.\textsuperscript{61}

**Suffocation of the womb**: is nothing else but a drawing back of it up to the upper parts. It is caused through the stretching out of it, which is ingendred of fulnesse that followeth after the retention and stopping of the menstruis. For in a woman, the wombe when it is reached and stretched out, it runneth not to another place like a

\begin{footnotes}

\item[61] Barrough, *Method*, p. 161.
\end{footnotes}
wandring beast, but is drawne backe through the extension.\textsuperscript{62} See also ‘Mother’.

\textbf{Tenesmus:} a continuall desire to go to the stool or siege, which the patient cannot defere nor eschue \[sic\], and yet he avoydeth nothing, except it be a little blood.\textsuperscript{63}

\textbf{Tertian fever:} a pure and exquisite tertian is caused when choler doth putrifie and rot within the vessels. It is so called, because it ceaseth one day, and cometh again the third day.\textsuperscript{64}

\textbf{Tympany:} a kind of dropsy […] when there is greater store of wind than wter, whereby the abdomen is stretched beyond measure, then it is called \textit{tympanites}, and than rather a noyse of wind then water, is perceived if the belly be strooke.\textsuperscript{65}

\textbf{Ulcer at the mouth of the bladder:} The bladder is exulcerate eitherr through some bile, or botch, or swelling […] or by eating and gnawing of a fluxe […] there followeth this sharpe pain of the bladder […] when the ulcers be foule and filthie, there commeth forth dreggie and slimie matter.\textsuperscript{66}

\textbf{Ungaric fever:} Inter febres malignas, et quidem non raro petechiales, est febris illa, quae vulgo morbus Ungaricus […] dicitur; [Among the malignant fevers, and indeed not rarely those with rashes, is the fever commonly called the Ungaric disease].\textsuperscript{67}

\textbf{Uterine wind:} The wombe is puffed up through cold, or humors corrupt in it, or through abortion or sore travell in childbirth the

\item[66] Barrough, \textit{Method of Physick}, p. 171.
\end{footnotes}
dore of it being shut, or a clod of bloud being in it, and stopping it.

68 **Wheat barley:** called [...] in Latin Hordeum nudum of other some Hordeum mundum. It maye be called in Englishe wheate barley because it hath no mo huskes on it then wheat hath.69

**Wind and phlegm in the stomach:** windinesse is engendred through flegmaticke humours in the stomack, or else through meates dissolved into vapors through want and debilitie of heate.70

**Worms:** There be three kinds of worms. The first be round and long, named Teretes. The second be broad, called therefore Lati. The third are called Ascarides. The first kind [...] be round and hand breadth in length [...] often in the slender and small guts, and they go into the stomach, and therefore are voided often by the mouth [...] peculiar to infants and children. The second kind [...] be broad and long like a gard or band [...] Ascarides be thin and short like small worms. They be found most commonly in the right gut, and in the end of the fundament. All [...] are engendred and caused of crude, raw, grosse and flegmaticke matter and through inconvenient rottennesse.71
